TPPA PAYMENTS

Accounting guide

Reports, collection files, exceptions, fee and receipt proposals, and counting the kiosk boxes in the head-office console.

For: Accounting staff at head office

Version 1.0 · 2026-11-10

The screenshots come from a demonstration system: every name, account, amount and code in them is made up.

14 Quick reference

1. About this guide

This guide is for **Accounting** at head office. You work in the head-office console, in a web browser, and you see every branch.

What you do:

- follow each branch's day on the **Overview** and the **Daily report**;
- download the **collection files** each utility receives, once the branch has closed its day;
- look into the **exceptions** (what does not add up) and resolve them with a note;
- propose new **fees** and new **receipt layouts** as drafts, for an admin to approve;
- count the **kiosk cash boxes** collected from the kiosks, at the office;
- read the **audit log**.

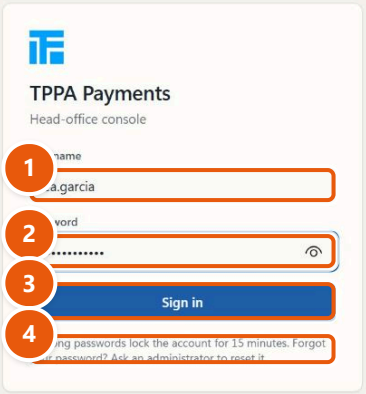

What you do not do: you cannot approve a fee or a receipt layout, make collection files before every terminal has closed the day, take a kiosk out of service, or change branches, users, terminals or utilities. Those belong to an admin (see the Admin guide). You do not work at a teller counter or in a kiosk's staff mode.

The screenshots come from a demonstration system: every name, account, amount and code in them is made up. The Accounting user in them is **Jonas Tan** (jonas.tan).

2. Getting started

Signing in

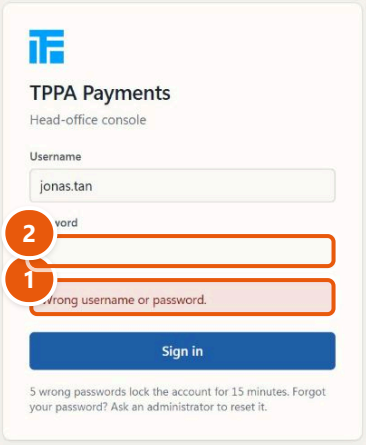

1. Open the console's address in your browser (IT gives it to you).
2. Type your **Username** (1) and **Password** (2).
3. Click **Sign in** (3).

1 Your username
2 Your password
3 Sign in
4 Lockout and forgotten password

The sign-in page of the head-office console.

If the username or password is wrong, the console says "Wrong username or password." and empties the password field. Type it again.

1 What went wrong

2 The password is cleared: type it again

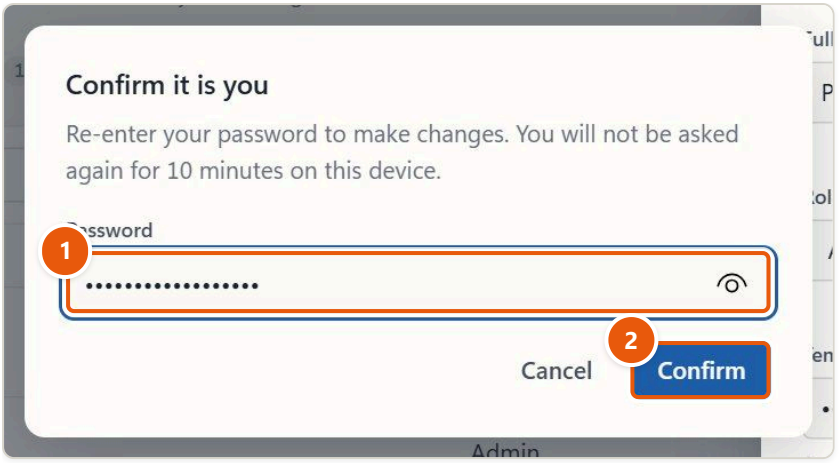

A wrong username or password.

Warning: 5 wrong passwords lock the account for 15 minutes. The console then says "This account is locked after too many failed attempts. Try again in 15 minutes or ask an administrator to unlock it." Forgot your password? Ask an administrator to reset it.

Two-step sign-in (a code from a phone app) is required for super admins; head office may require it for other roles too. If the console asks you to set it up, follow the screen; the steps are in the Super admin guide.

Confirming it is you

Some changes ask for your password again: saving a fee or layout draft, discarding one, saving a kiosk box count and recording a collection from a slip. The dialog "Confirm it is you" opens. Type your own password (1) and click **Confirm** (2); the change you asked for then goes ahead by itself. You are not asked again for a while on the same computer.

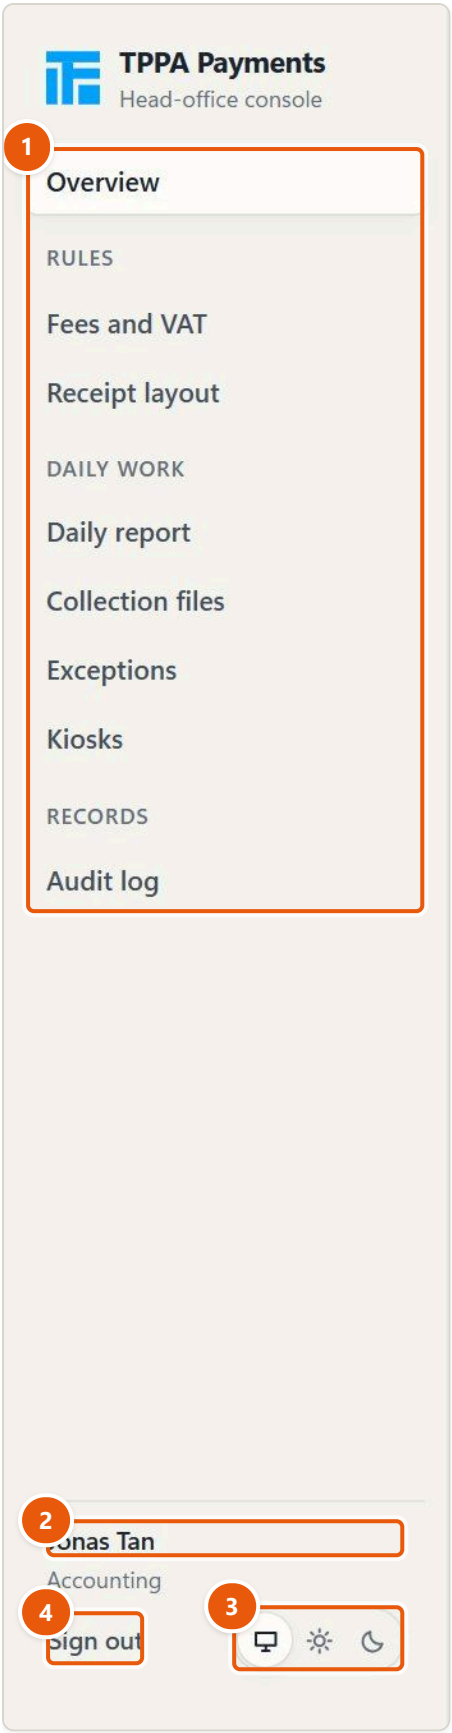

1 Your own password again 2 Confirm

Sensitive changes ask for the password again.

Your menu

The menu on the left shows only the pages your role may use (1). At the bottom are your name and role (2), the theme switch (3: same as this computer, light or dark) and **Sign out** (4).

1. The menu: only the pages your role may use
2. Who is signed in, and the role
3. Light, dark or as this computer
4. Sign out

The menu of Accounting.

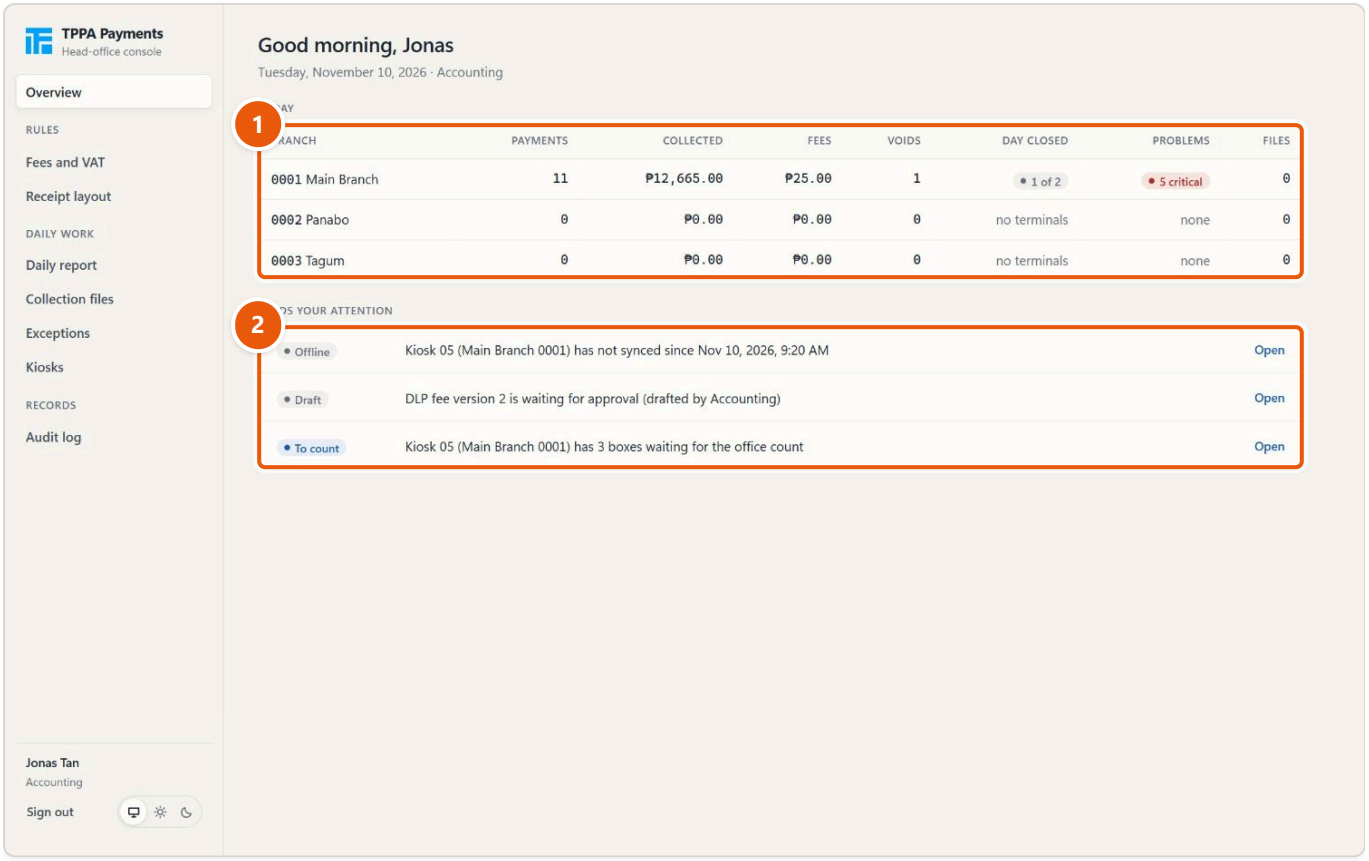

Menu group	Pages
(top)	Overview
RULES	Fees and VAT, Receipt layout
DAILY WORK	Daily report, Collection files, Exceptions, Kiosks
RECORDS	Audit log

Sign out when you leave the computer.

3. The Overview

The console opens on the **Overview**. It greets you with the date and your role, then shows:

- **TODAY** (1): one line per branch, for today. Click a branch to open its Daily report.
- **NEEDS YOUR ATTENTION** (2): what is waiting, most urgent first, each with **Open** to go to the page where you deal with it.

1 Today, per branch

2 Drafts, kiosk boxes to count

Overview as Accounting.

The columns of **TODAY**:

Column	What it means
PAYMENTS	Valid payments taken today at the branch's counters and kiosks

Column	What it means
COLLECTED	The bill amounts collected for the utilities
FEES	TPPA's service fees on those payments
VOIDS	Payments voided today
DAY CLOSED	How many of the branch's terminals have closed the day, e.g. "1 of 2"; "no terminals" when none is registered
PROBLEMS	Open problems reported by the terminals, e.g. "5 critical"; "none"
FILES	Collection files made for the day

What Accounting sees under **NEEDS YOUR ATTENTION**:

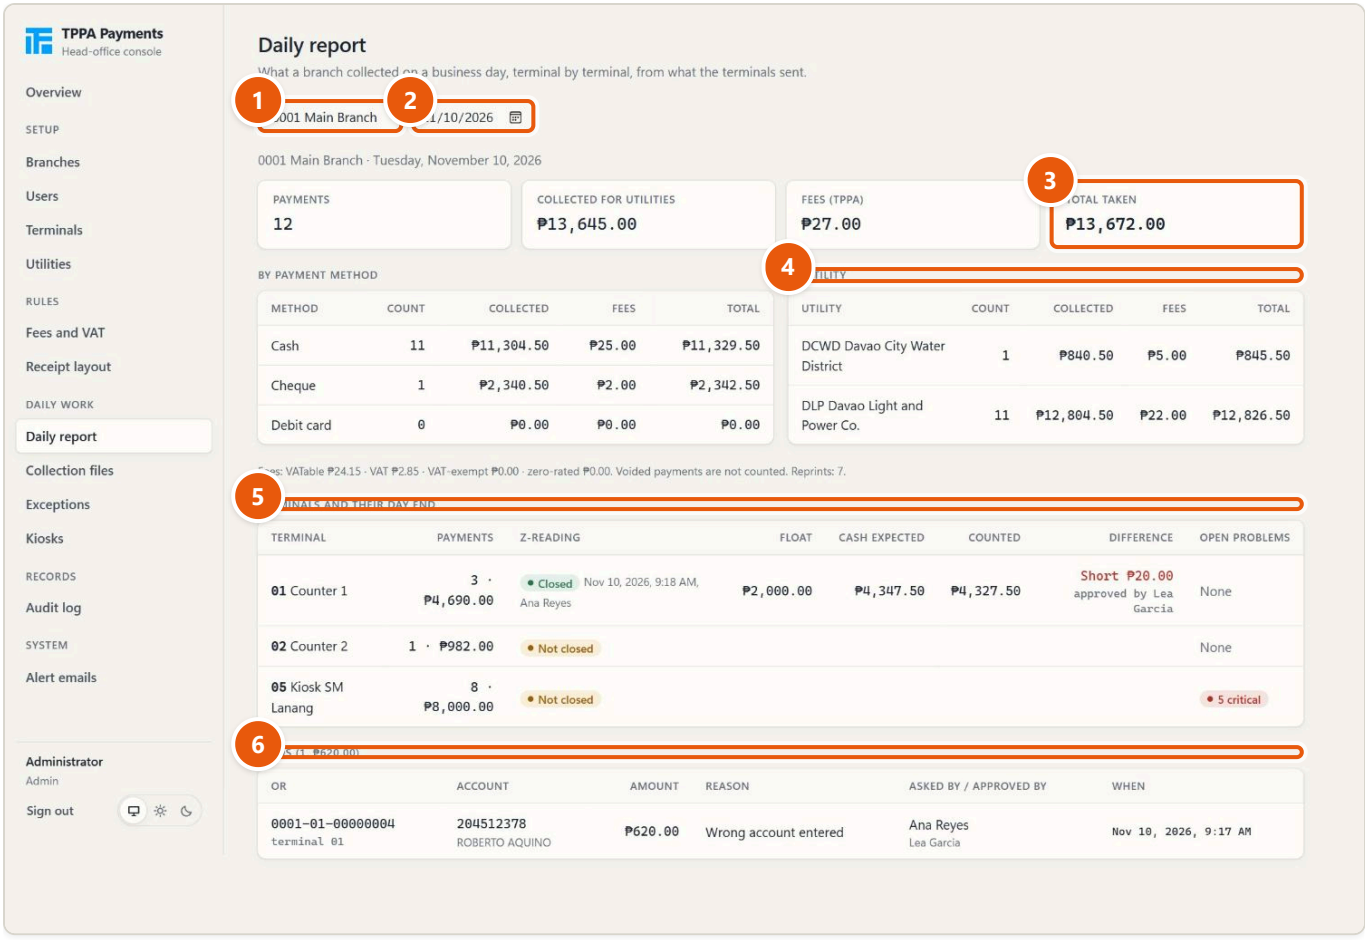

- **Offline**: a kiosk that has not synced for more than 10 minutes.
- **Collect**: a kiosk cash box at 75 % of its limit.
- **Draft**: a fee or receipt layout draft waiting for an admin's approval, e.g. "DLP fee version 2 is waiting for approval (drafted by Accounting)".
- **Scheduled**: an approved fee or layout version that takes effect later.
- **To count**: kiosk boxes waiting for the office count, e.g. "Kiosk 05 (Main Branch 0001) has 3 boxes waiting for the office count".
- Blocking items such as **No fee** (a utility without a fee in force) or **Kiosk down** (a kiosk out of service) come first.

When there is nothing: "Nothing needs your attention. Everything is set up and in force."

4. The Daily report

When: every day, to see what each branch collected, and before you send the collection files.

1. Click **Daily report** in the menu.
2. Choose the **Branch** (1) and the **Business day** (2).

1. Branch
2. Business day
3. The day in totals
4. By payment method and by utility
5. Each terminal: Z-reading, cash, difference
6. Voids: who asked, who approved

The daily report of the Main Branch, today.

The report says what a branch collected on a business day, terminal by terminal, from what the terminals sent. The heading under the filters names the branch and the day, e.g. "0001 Main Branch · Tuesday, November 10, 2026".

The day in totals (3)

Figure	What it means
PAYMENTS	The number of valid payments (voided ones are not counted)
COLLECTED FOR UTILITIES	The bill amounts: the money that belongs to the utilities
FEES (TPPA)	TPPA's service fees
TOTAL TAKEN	Collected plus fees: what the customers paid

Below the totals, the line "Fees: VATable … · VAT … · VAT-exempt … · zero-rated …" splits the fees for VAT, and gives the day's number of reprints. "Voided payments are not counted."

By payment method and by utility (4)

Two tables with **Count**, **Collected**, **Fees** and **Total**: one per payment method (Cash, Cheque, Debit card), one per utility (for example DCWD and DLP). The utility table is the one to compare with the collection files: the files carry the **Collected** amounts, never the fees.

Terminals and their day end (5)

One line per terminal of the branch (counters and kiosks):

Column	What it means
Terminal	Its 2-digit code and name, e.g. "01 Counter 1", "05 Kiosk SM Lanang"
Payments	Number and total of the payments it took
Z-reading	**Closed** with the time and who closed it, or **Not closed** (amber today, red for a past day)
Float	The opening float the teller declared
Cash expected	Float plus the cash taken, less any kiosk credits refunded at that counter
Counted	The cash the teller counted at the day end
Difference	Balanced (₱0.00), or **Short** / **Over** with the amount, and "approved by" the branch manager
Open problems	"N critical", "N to check", or "None"

The float, expected, counted and difference appear once the terminal has closed the day. A kiosk closes its day by itself at 12:00 midnight (Manila); it has no drawer, because its cash is counted when its box is collected (see "Counting the kiosk boxes").

In the example, Counter 1 closed at 9:18 AM, short by ₱20.00, approved by Lea Garcia, the branch manager; Counter 2 and the kiosk have not closed yet.

Voids (6)

Every payment voided that day: the OR number, the account, the amount, the reason, who asked for the void and who approved it (the branch manager), and when.

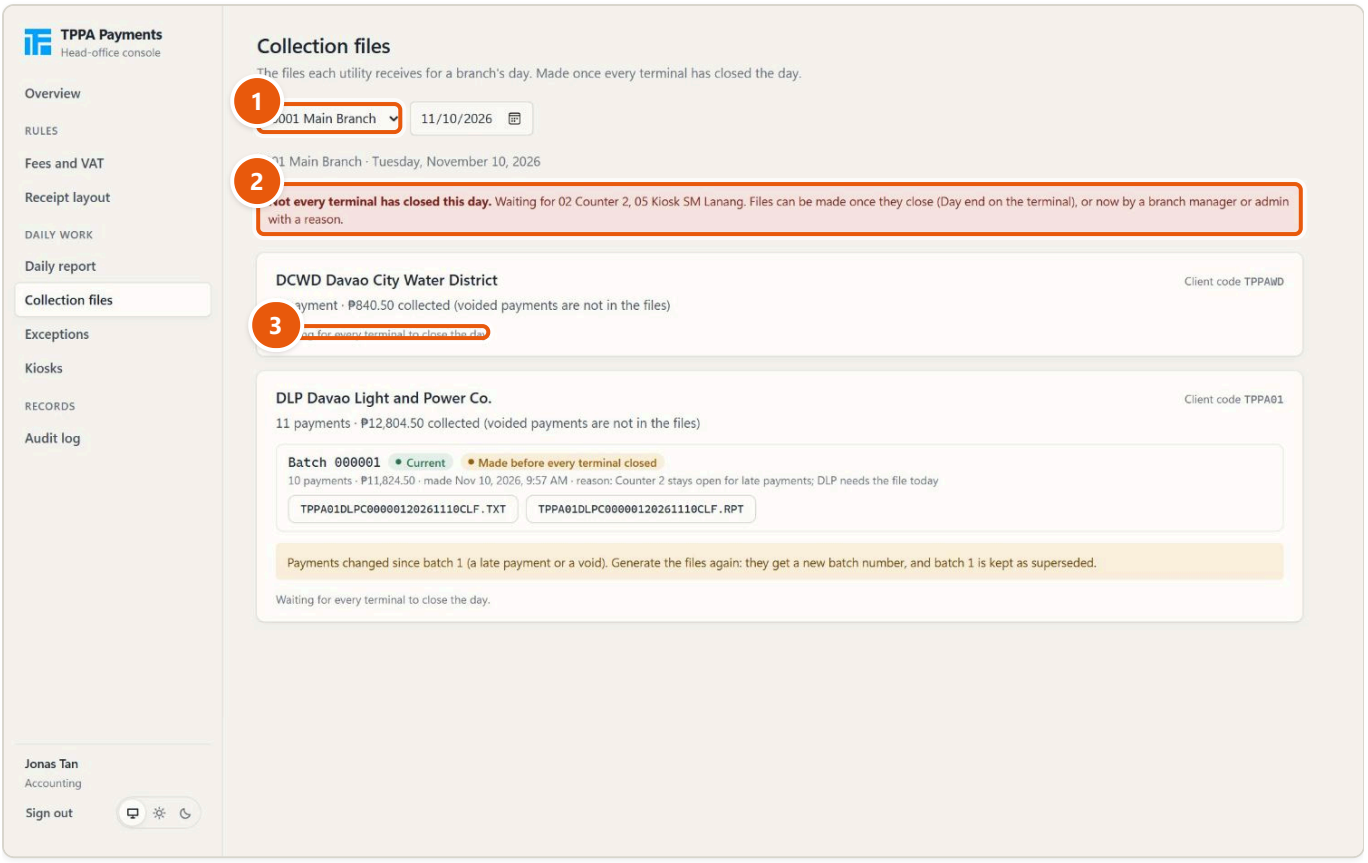

5. Collection files

The collection files are what each utility receives for a branch's day: one pair per branch, utility and day. The **.TXT** file is for the utility's computer; the **.RPT** file is the report a person reads. Both carry only valid payments and only the bill amounts (never the fee).

When the files can be made

The files can be made **once every terminal of the branch has closed the day** (the Day end at each counter; a kiosk closes by itself at midnight). Then the page says: "Every terminal of the branch has closed [the day]: the files can be made."

Before that, only a branch manager or an admin can make them, with a reason. **Accounting cannot make them early.** You see a red message naming the terminals still open (2), and on each utility's card only "Waiting for every terminal to close the day." (3):

1. Branch and day
2. Has every terminal closed the day?
3. Accounting cannot make them early

Collection files as Accounting, before every terminal closed.

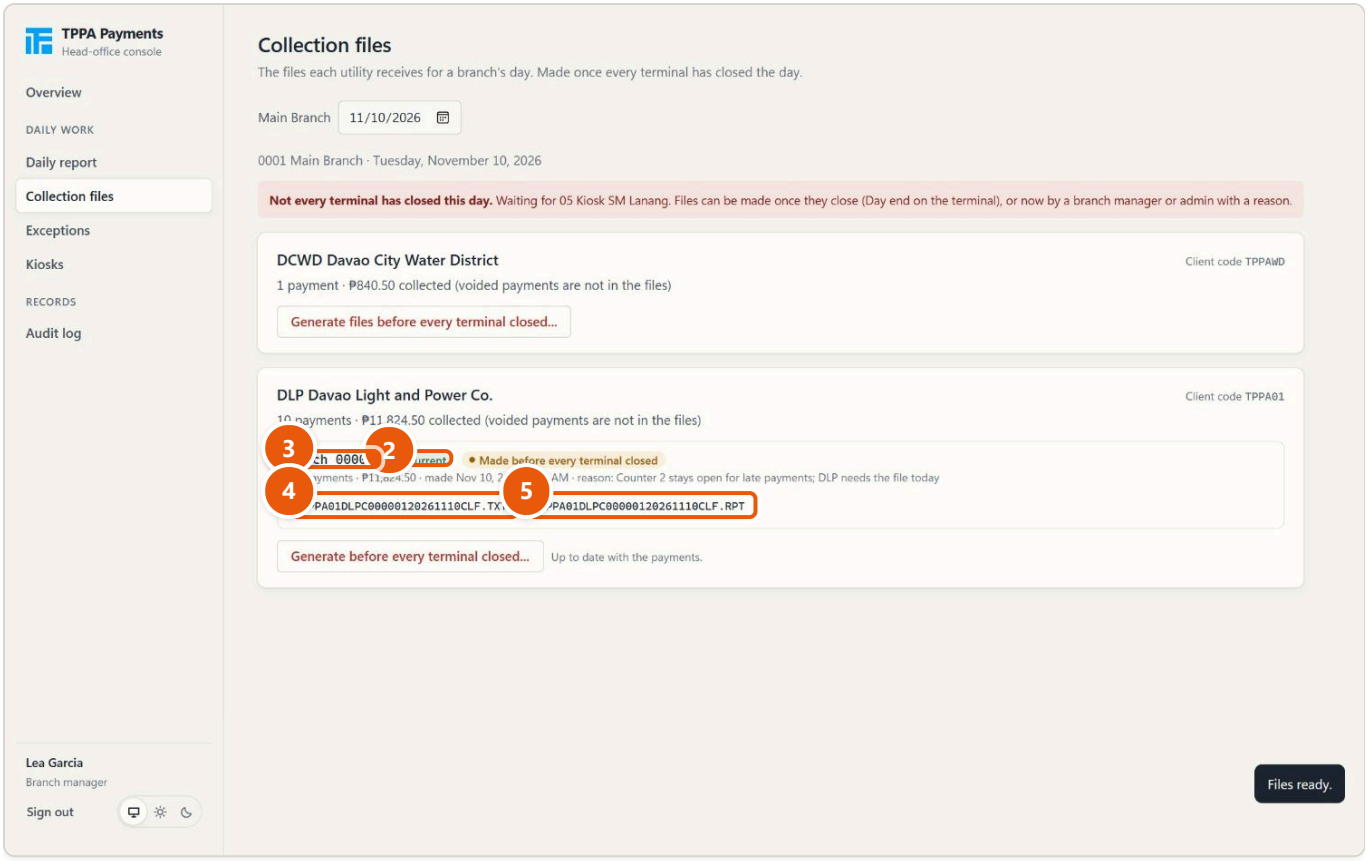

The message reads: "Not every terminal has closed this day. Waiting for 02 Counter 2, 05 Kiosk SM Lanang. Files can be made once they close (Day end on the terminal), or now by a branch manager or admin with a reason."

What to do: wait for the day end, or, if the utility needs the file now, ask the branch manager (or an admin) to make it with a reason. A terminal that has never been set up does not count.

Making the files

1. Click **Collection files** in the menu.
2. Choose the branch and the day (1). Only today or a past day can have files.
3. Check the readiness message. Each utility enabled at the branch has its own card, with its client code and "N payments · ₱... collected (voided payments are not in the files)".
4. On the utility's card, click **Generate files**. The console says "Files ready."

The card then shows the batch and its two files:

1. The batch number
2. Current
3. Made before every terminal closed, with the reason
4. Download the .TXT
5. Download the .RPT

The DLP files of the day, with their batch number and the two downloads.

- **Batch 000001** (1): the batch number, which also appears in the file name.
- **Current** (2): this is the batch to send.
- "Made before every terminal closed" (3) appears only when a branch manager or admin made it early. Their reason follows on the same line, and the Exceptions page lists a check "Files made before every terminal closed" for that day.
- The **.TXT** (4) and **.RPT** (5) download links.

A file name is built from the branch's client code, the utility's distribution code, the batch number and the day. For DLP at the Main Branch: `TPPA01` `DLPC` `000001` `20261110` `CLF.TXT`.

Downloading and sending to the utility

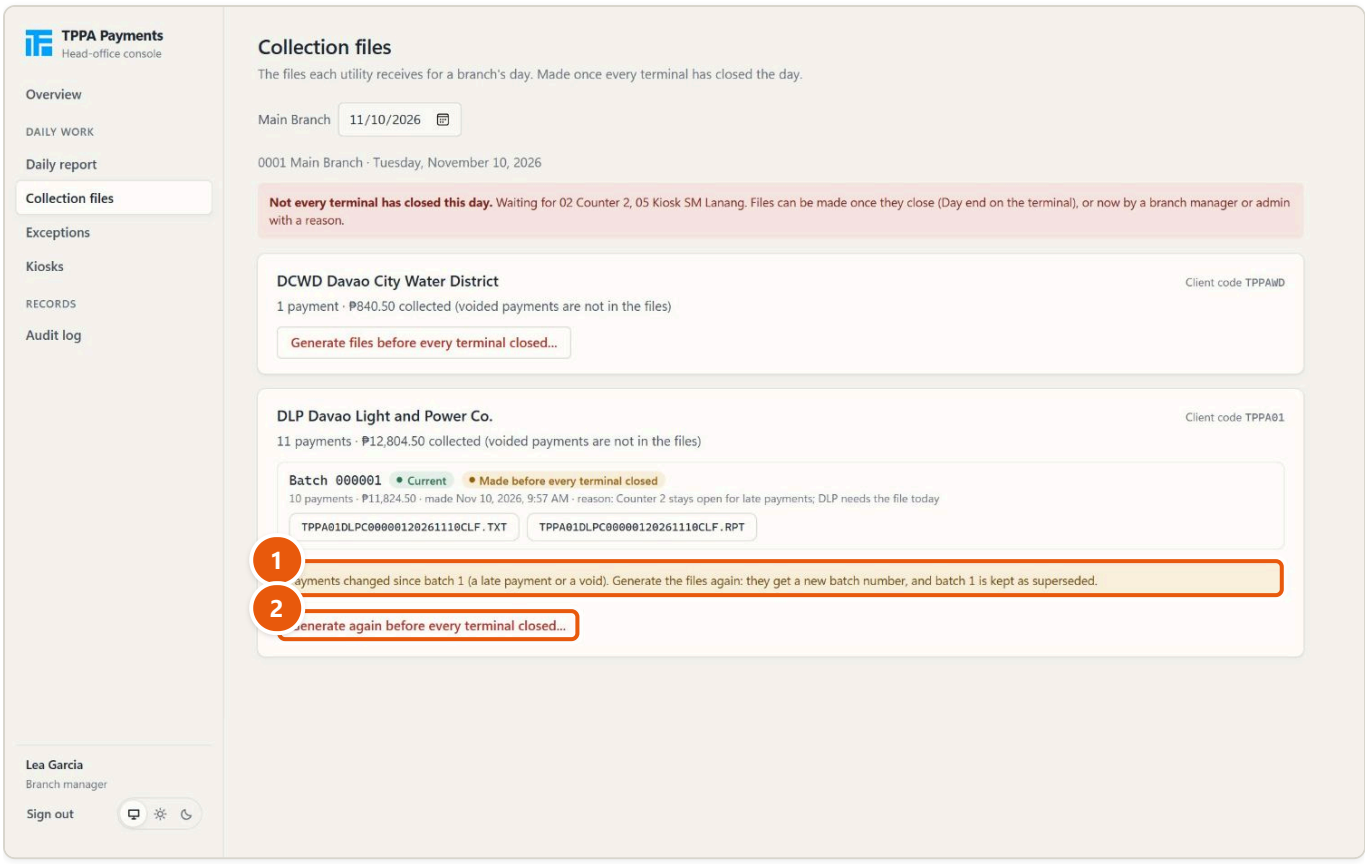

1. Click the **.TXT** file name; the browser saves it.
2. Click the **.RPT** file name; the browser saves it too.
3. Send both files to the utility through the channel agreed with it. The console does not send them: sending is done by hand.

Every download is recorded in the audit log.

> **Important:** Always send the batch marked **Current**. A file never changes once made; a correction is a new batch.

Generate again, and superseded batches

If payments change after a batch was made (a late payment, or a void), the card warns: "Payments changed since batch 1 (a late payment or a void). Generate the files again: they get a new batch number, and batch 1 is kept as superseded."

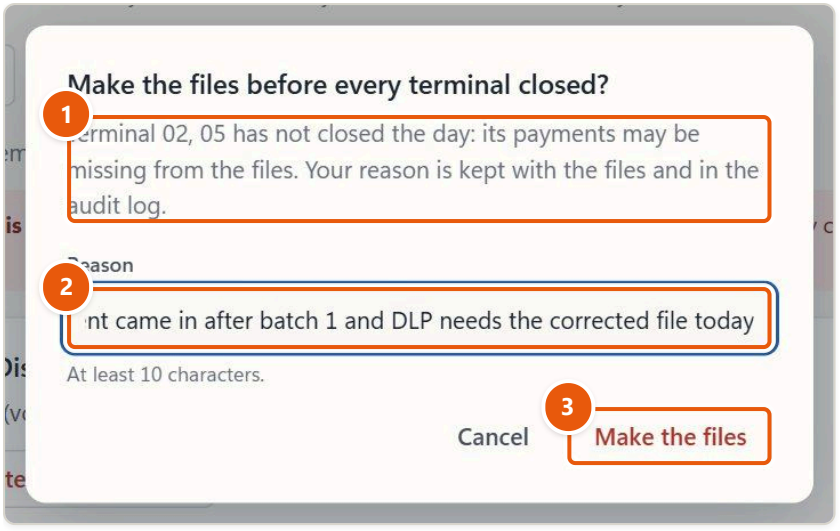

1 Payments changed since the batch

2 Generate again

A late payment after batch 1: the files must be made again (seen by a branch manager).

Once every terminal has closed, click **Generate again**. If terminals are still open, a branch manager or admin generates again with a reason, as they did here:

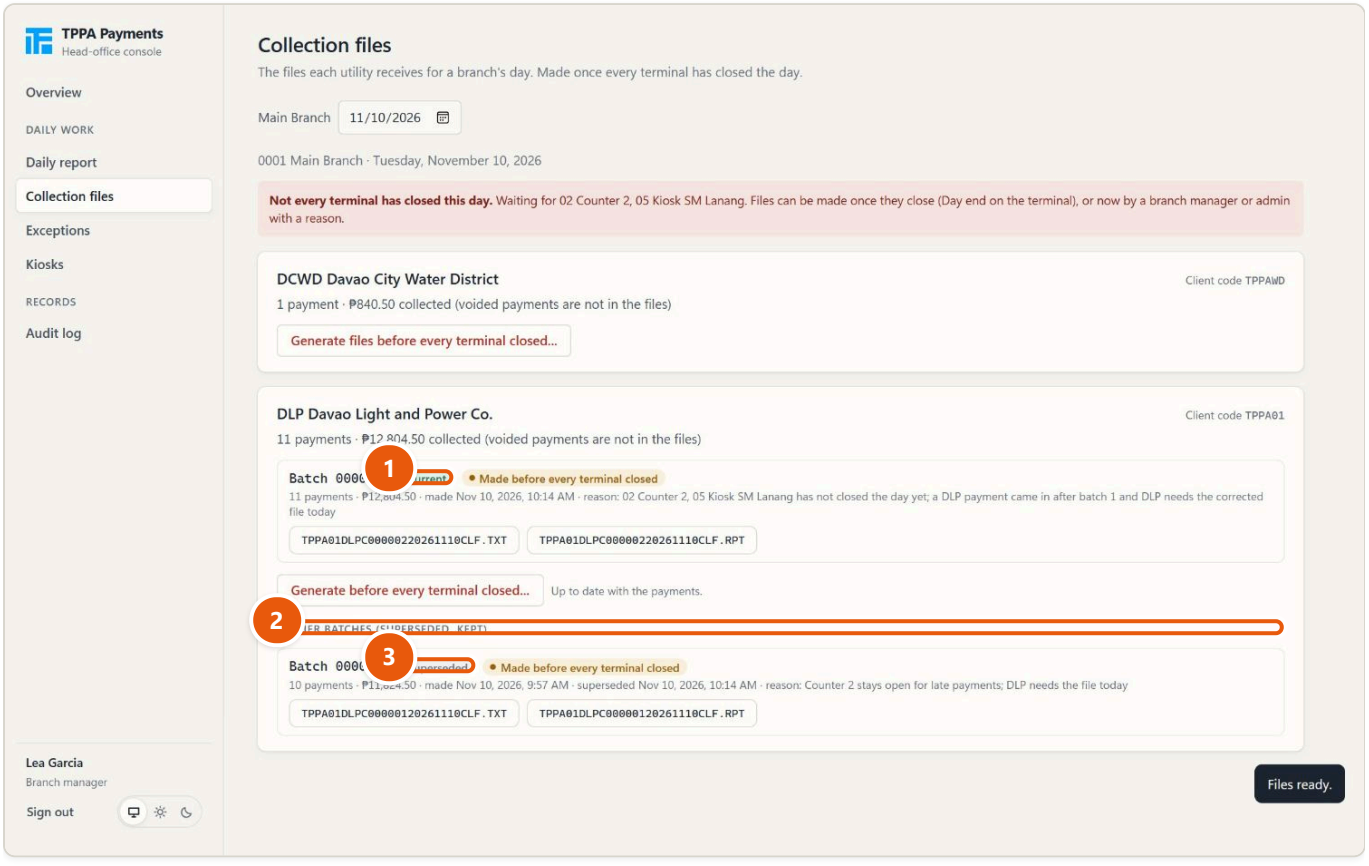

1 The terminals still open

2 Reason: names the terminal still open

3 Make the files

Generating again before every terminal closed: a reason again.

The new batch becomes **Current** (1). The earlier one moves to "EARLIER BATCHES (SUPERSEDED, KEPT)" (2), marked **Superseded** with the time it was replaced; its files can still be downloaded (3).

1 The new batch is current

2 Earlier batches, kept as superseded

3 Superseded: when, and still downloadable

Generated again: the earlier batch is kept.

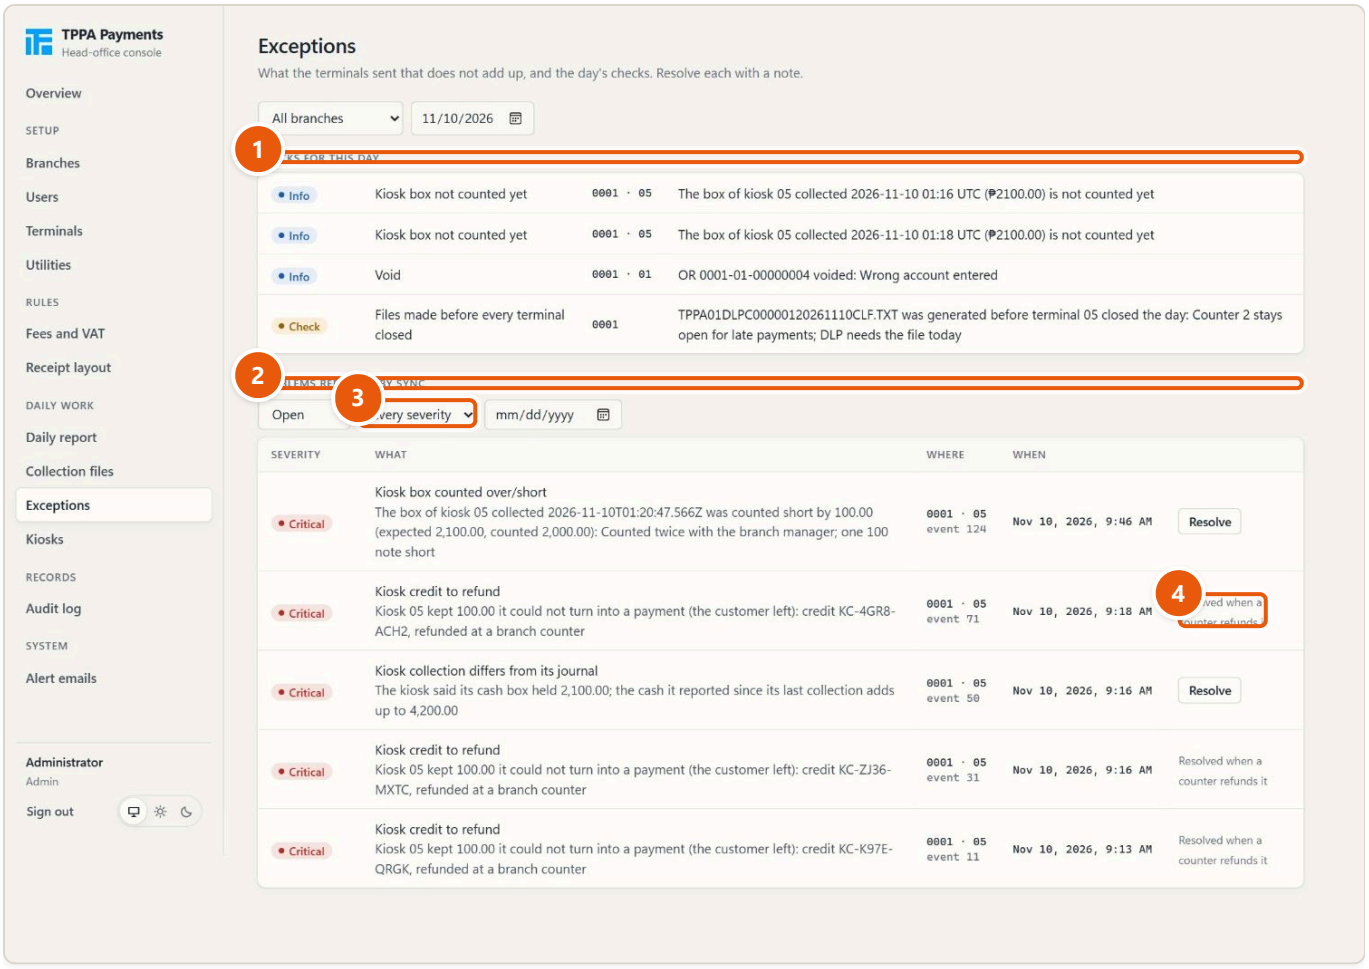

When nothing changed, the button is greyed and the card says "Up to date with the payments.": generating again would give the same files, so no new batch is made.

If you had already sent the superseded batch, send the new current batch and tell the utility that it replaces the earlier one: the console does not tell the utility.

6. Exceptions

When: every day, and when an alert email arrives.

The Exceptions page shows "What the terminals sent that does not add up, and the day's checks. Resolve each with a note." Choose the branch ("All branches" or one) and the day at the top.

1. Checks for this day: clear by themselves
2. Problems reported by sync
3. Filters: status, severity, day
4. A kiosk credit: resolved by its refund

Exceptions, all branches.

The page has two parts.

CHECKS FOR THIS DAY (1) are worked out live for the chosen day. They clear by themselves when the cause goes away (the box is counted, the terminal syncs), so they have no **Resolve** button. When there are none: "Nothing to check: every terminal is in order."

PROBLEMS REPORTED BY SYNC (2) are what the server found when the terminals sent their records. Each stays open until someone resolves it with a note. Filter them (3) by status (Open, Resolved, All), by severity (Every severity, Critical, Check) and by the day they were raised.

Severities

Severity	Colour	Meaning
Critical	Red	Money or records that do not add up: look into it today. Critical problems are also emailed.
Check	Amber	Something to check, such as an approved cash difference
Info	Blue	For your information (a void, a box not counted yet)

What the common kinds mean

Kind (as on screen)	What it means
Cash over/short (approved)	A counter's cash count at the day end differed from the cash expected; the branch manager approved it
Cash over/short, not approved	The cash differed and no branch manager approved it
Day closed without a cash count	A day was closed without a drawer count
Approved by the person who asked	A void, float correction or cash difference approved by the person who asked for it
Approved by someone who may not	Approved by someone who is not an active branch manager of the branch
Void after the day closed / Payment after the day closed	Something recorded for a day already closed
Z-reading does not match	A figure of a terminal's Z-reading differs from head office's own count
Fee does not match	The charges of a payment differ from the fee schedule
Old fee used while offline	A terminal used an older fee version while it was offline
Records out of order	A terminal's record does not link to the last one head office accepted
Terminal clock off	A terminal's clock differs from the server's
Machine serial changed	The computer's own serial number changed (the BIR permit follows the machine)
Kiosk credit to refund	A kiosk kept cash it could not turn into a payment and printed a credit slip: money owed to a customer
Kiosk refund nobody approved / Kiosk refund not recorded by the counter	A kiosk credit refund at a counter that head office did not approve, or that it approved but the counter never reported
Kiosk box counted over/short	The office count of a kiosk box differed from what the kiosk kept
Kiosk collection differs from its journal	What the kiosk said its box held differs from the cash it reported since the last collection
Kiosk cash door opened without staff	The cash door of a kiosk opened with nobody signed in to staff mode
Kiosk receipt not printed / Kiosk credit slip not printed	A kiosk could not print a receipt or a credit slip

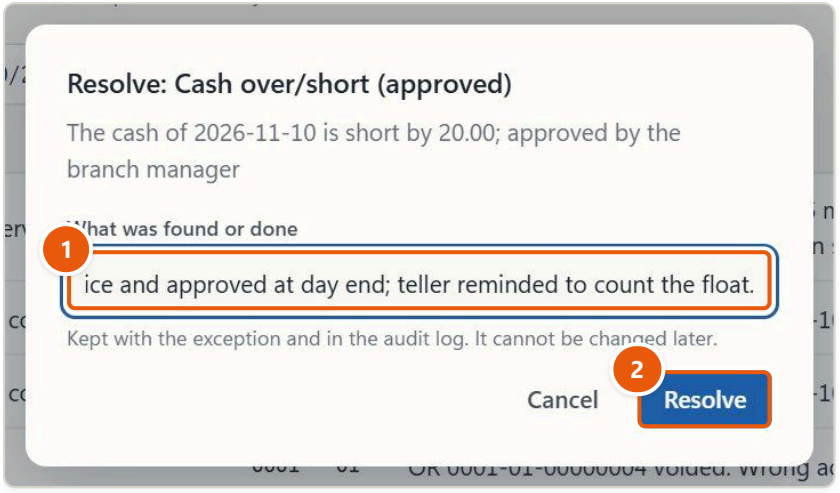

The day's checks you meet most:

Check	What it means
Kiosk box not counted yet	A collected kiosk box waits for the office count (Info)
Void	A payment voided that day, with its reason (Info)
Files made before every terminal closed	Collection files made early, with the reason given
Day not closed	A terminal did not close a past day
Terminal not syncing	A terminal has not sent its records for some hours
Many reprints	A terminal reprinted more receipts than usual that day
Kiosk out of service / Kiosk cash box to collect / Kiosk not heard from	A kiosk that needs someone today

A kind not listed here shows its code; ask an admin or IT.

Resolving a problem

1. Find out what happened (ask the branch, check the Daily report or the kiosk).
2. Click **Resolve** on the problem's line.
3. In "What was found or done" (1), write what you found or did, at least 5 characters.
4. Click **Resolve** (2). The console says "Resolved."

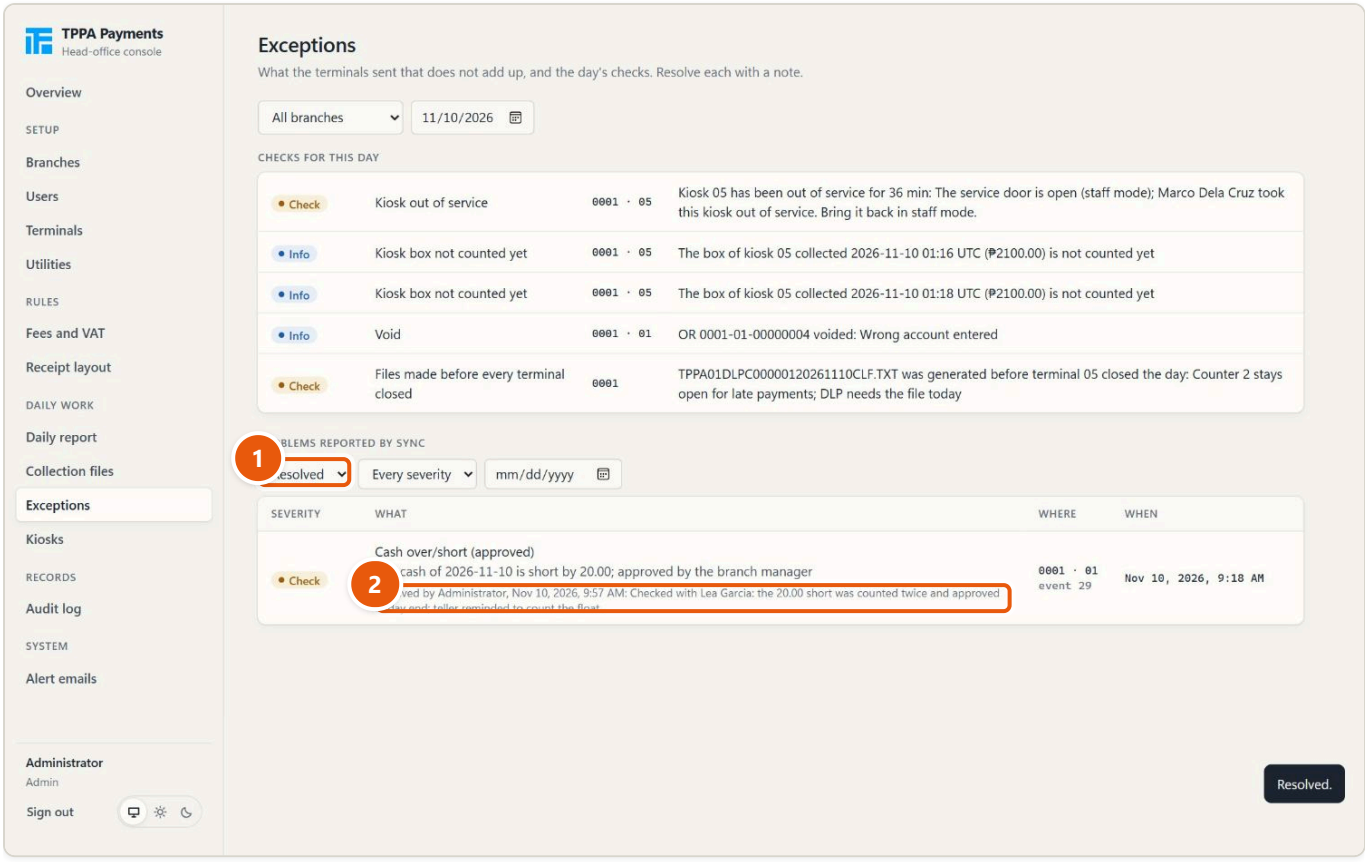

1 What was found or done (kept, cannot change) 2 Resolve

Resolving the ₱20 cash difference of Counter 1.

Warning: The note is kept with the exception and in the audit log. It cannot be changed later. Each problem is resolved once.

To see resolved problems, set the status filter to **Resolved** (1). Each line keeps who resolved it, when, and the note (2):

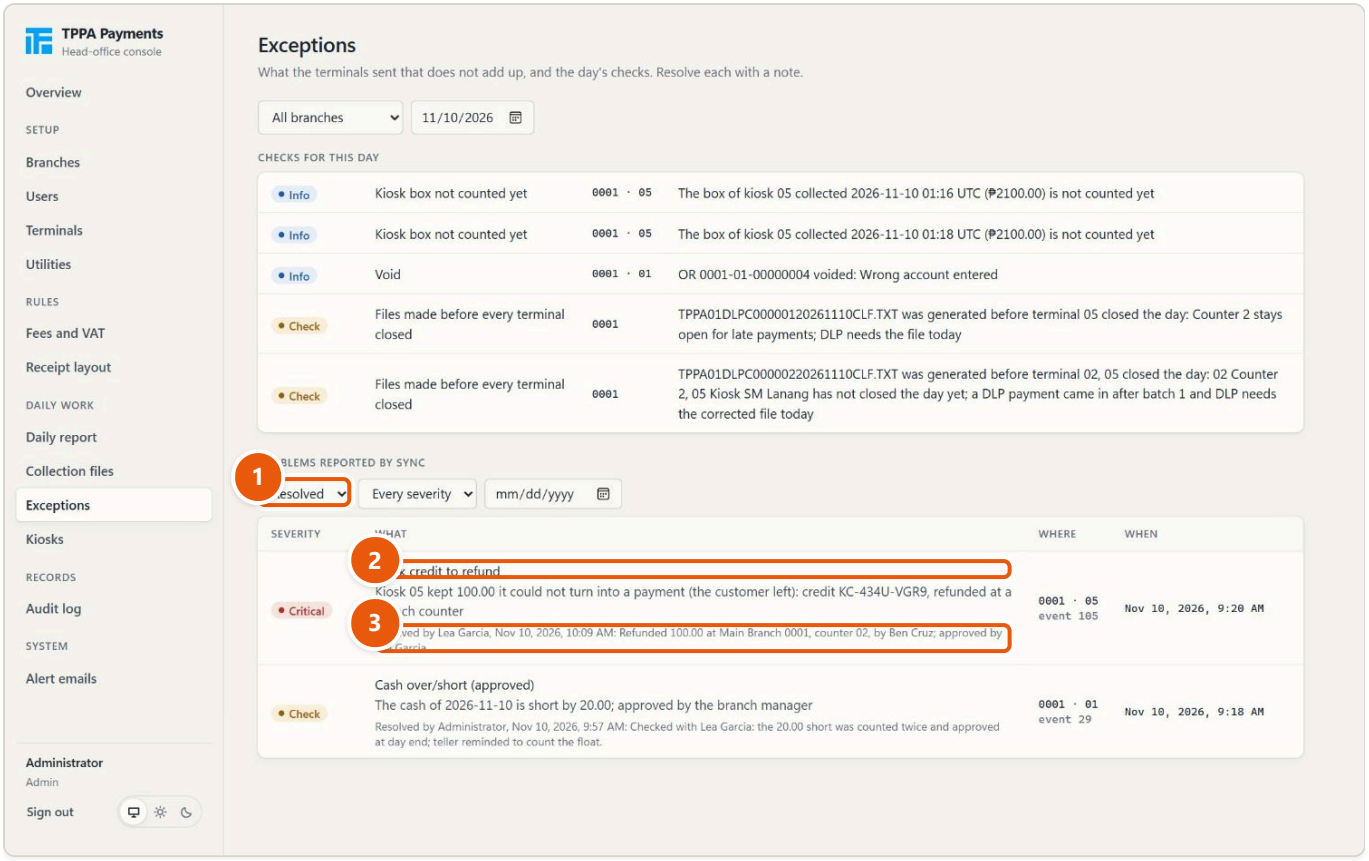

1 Status: Resolved

2 Who resolved it, when, and the note

Resolved exceptions keep their note.

Kiosk credits close only by their refund

A **Kiosk credit to refund** has no **Resolve** button: it says "Resolved when a counter refunds it". It is money owed to a customer, so it cannot be closed by hand. The customer brings the slip to a TPPA counter; the teller refunds it with the branch manager's approval, and the line becomes resolved by itself, naming where it was refunded, by whom, and who approved it:

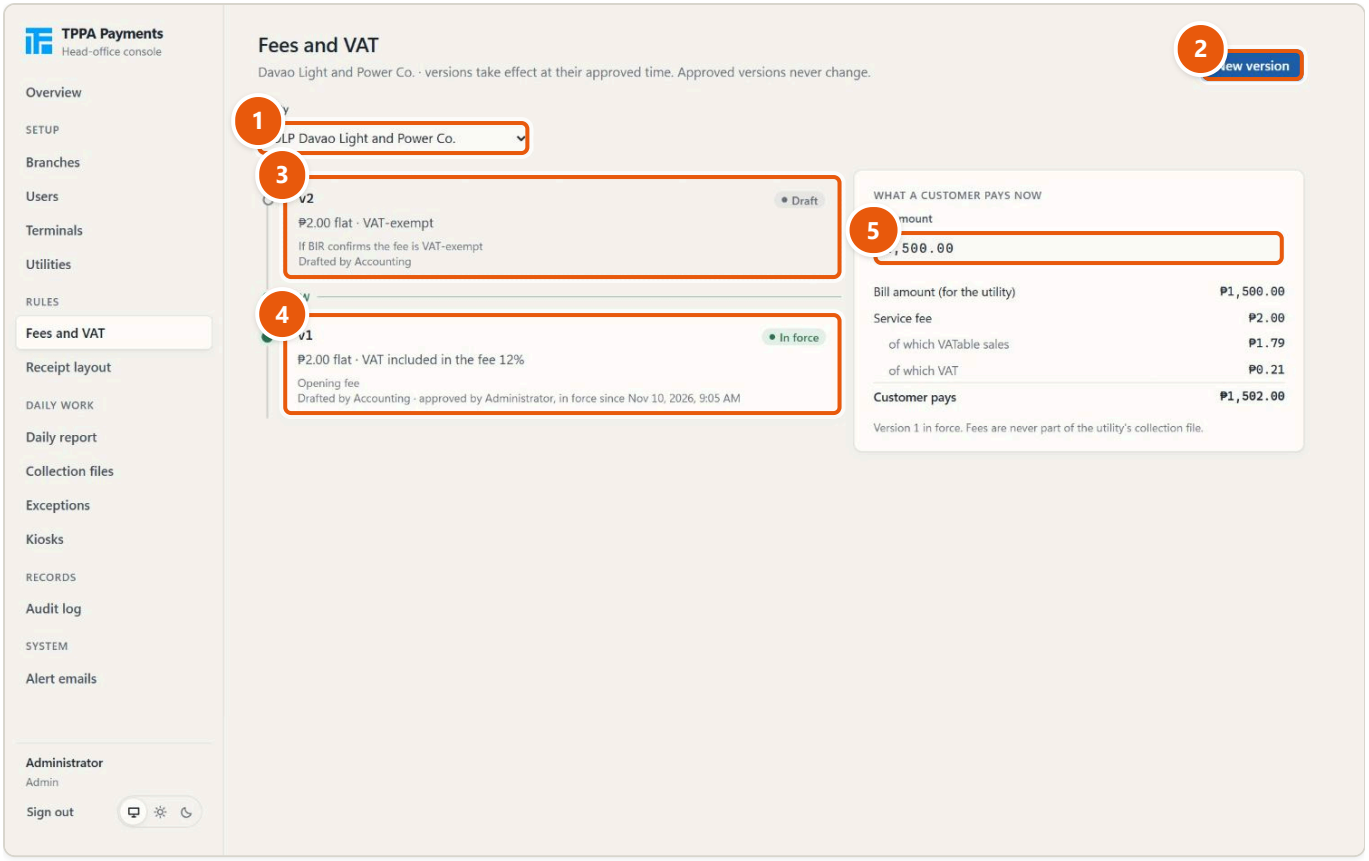

1. Status: Resolved
2. The kiosk credit
3. Resolved by its refund: where, who, approved by

A kiosk credit is resolved by its refund at a counter, not by hand.

7. Proposing fee changes

The service fee and its VAT are set per utility, in **versions**. Accounting **proposes** a new version as a draft; an **admin approves** it and sets when it takes effect. Approved versions never change.

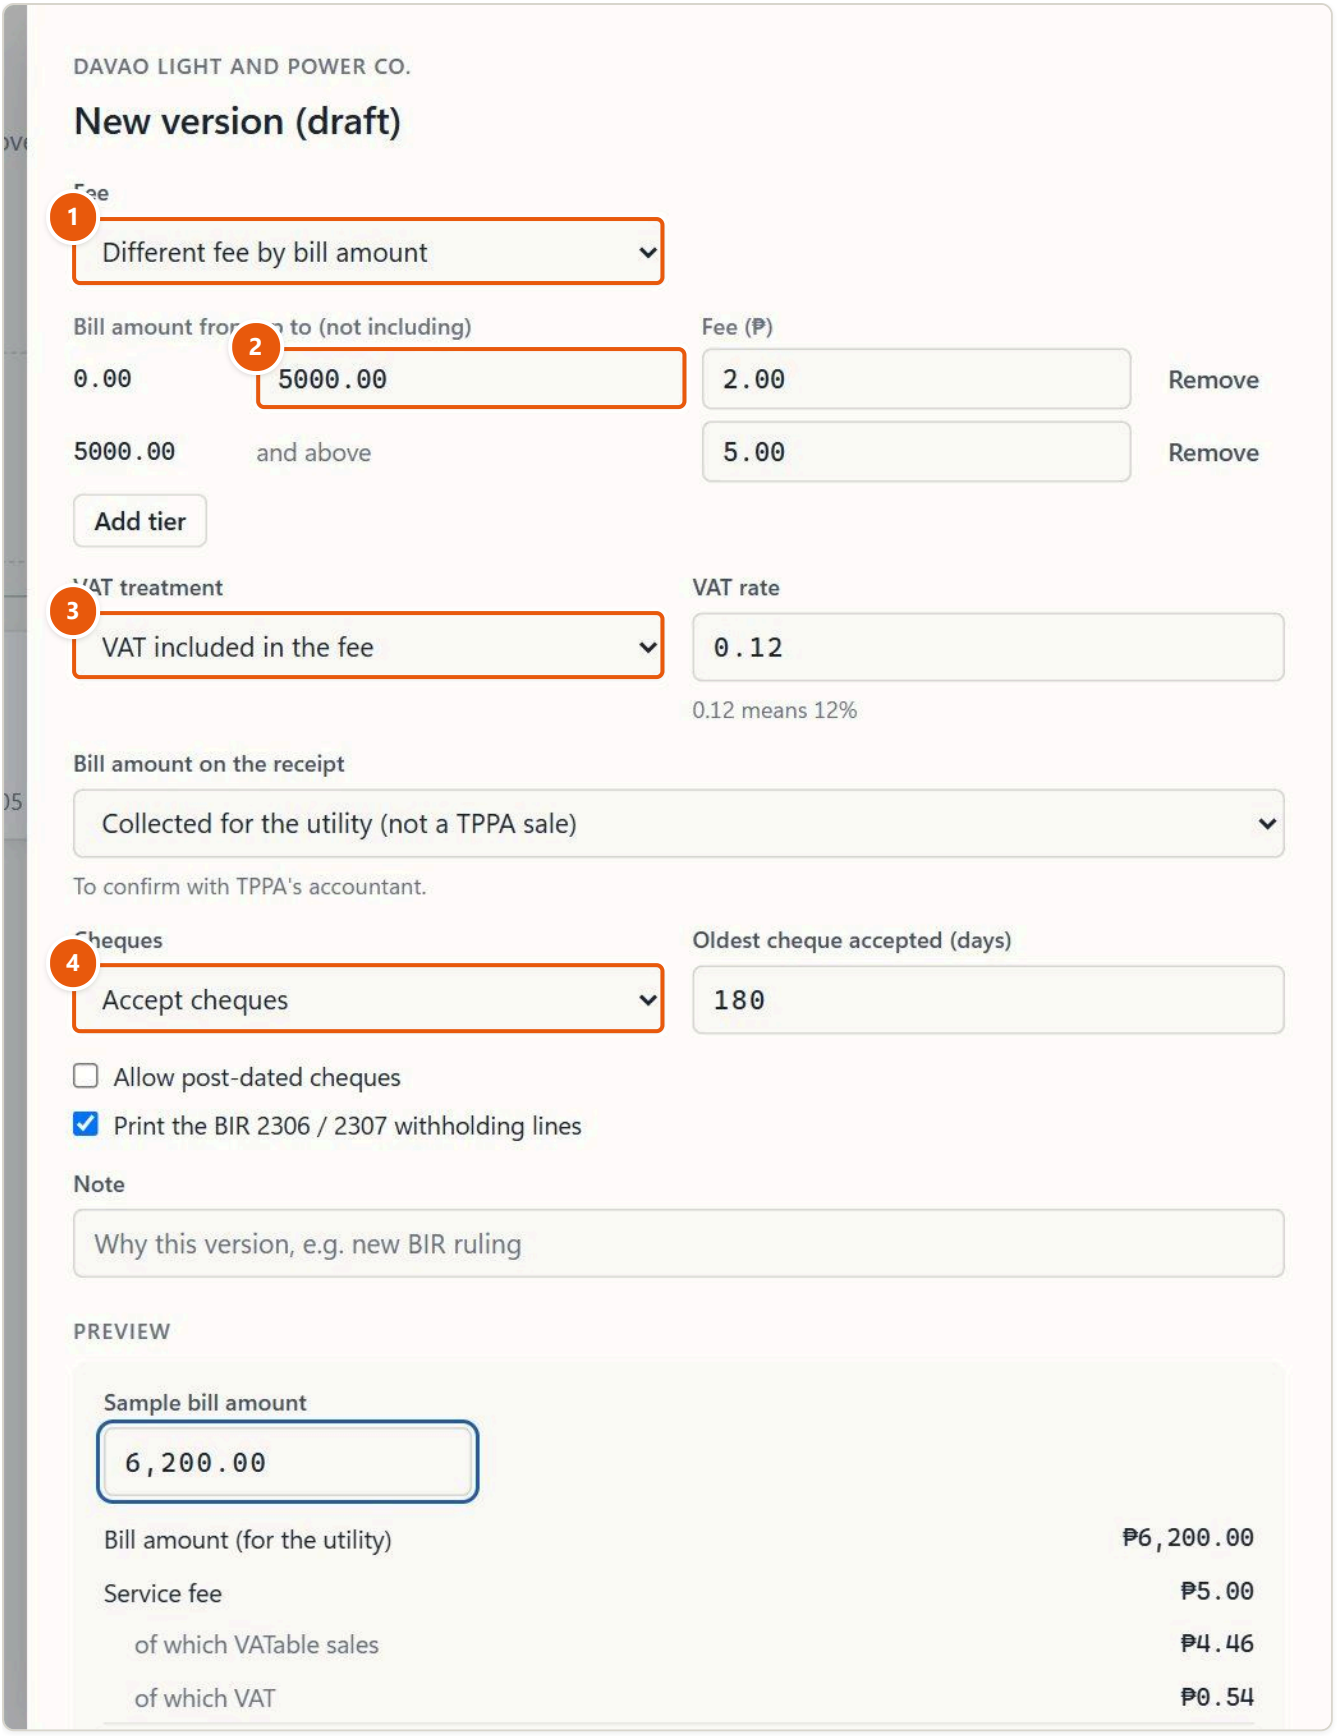

1. Click **Fees and VAT** in the menu.
2. Choose the **Utility** (1). The page lists its versions, newest first: a draft (3), the version in force (4), and what a customer pays now (5).

1. Utility
2. New version
3. A draft waiting for approval
4. The version in force
5. What a customer pays now

Fees and VAT for DLP (here as an admin; you see the same page).

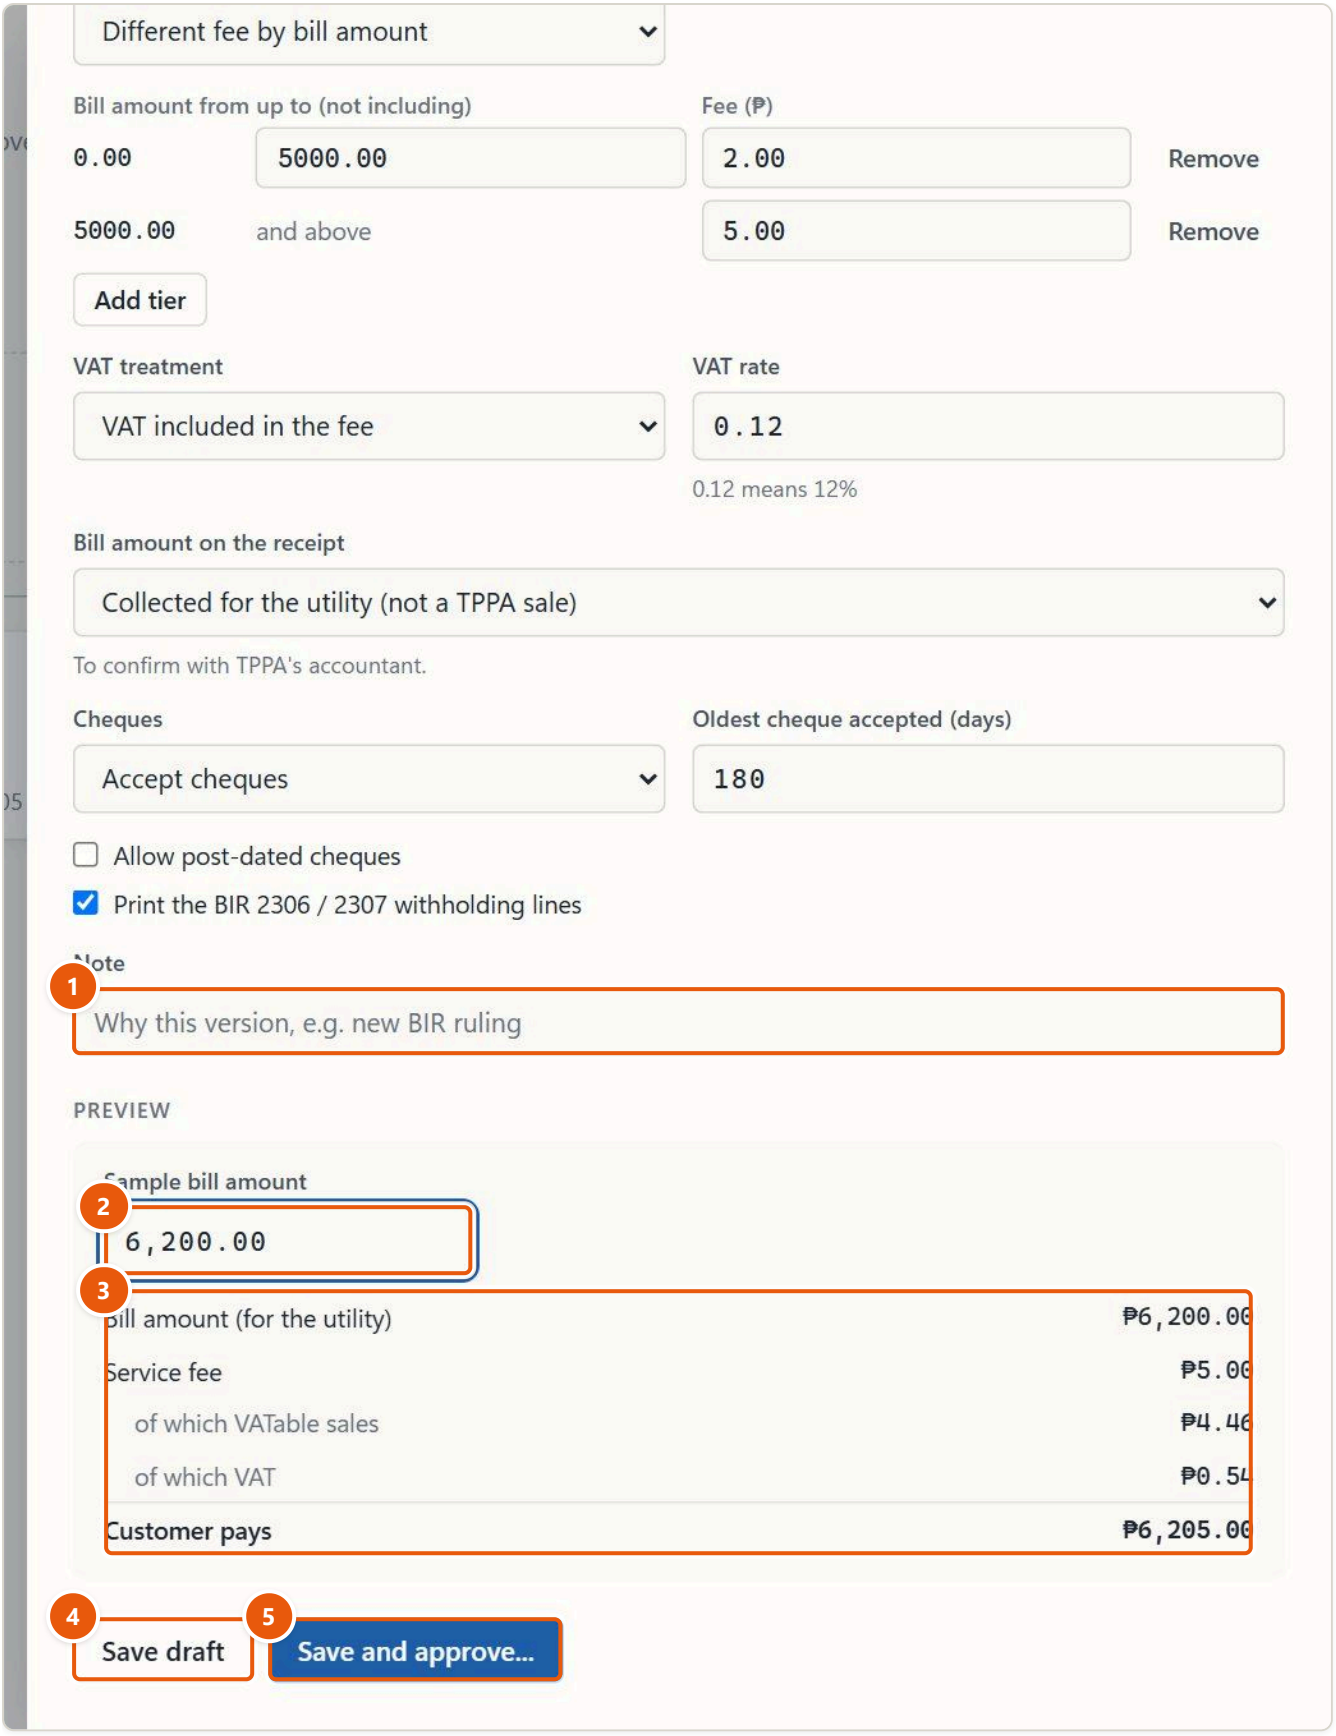

3. Click **New version** (2), or click an existing draft to open it.
4. Fill in the version:
   - **Fee**: the same fee for every payment, or **Different fee by bill amount** with tiers ("Bill amount from", "up to (not including)", "Fee (₱)"; **Add tier**, **Remove**) (1, 2);
   - **VAT treatment** and **VAT rate** (3);
   - the cheque rules (4): oldest cheque accepted, post-dated cheques;
   - the **Note**: why this version, e.g. a new BIR ruling.

1 Same fee, or by bill amount
2 Tiers: up to (not including)
3 VAT
4 Cheques

A new fee version with two tiers (closed without saving).

5. Try a **Sample bill amount** in the preview: it shows the service fee, its VAT and what the customer would pay.

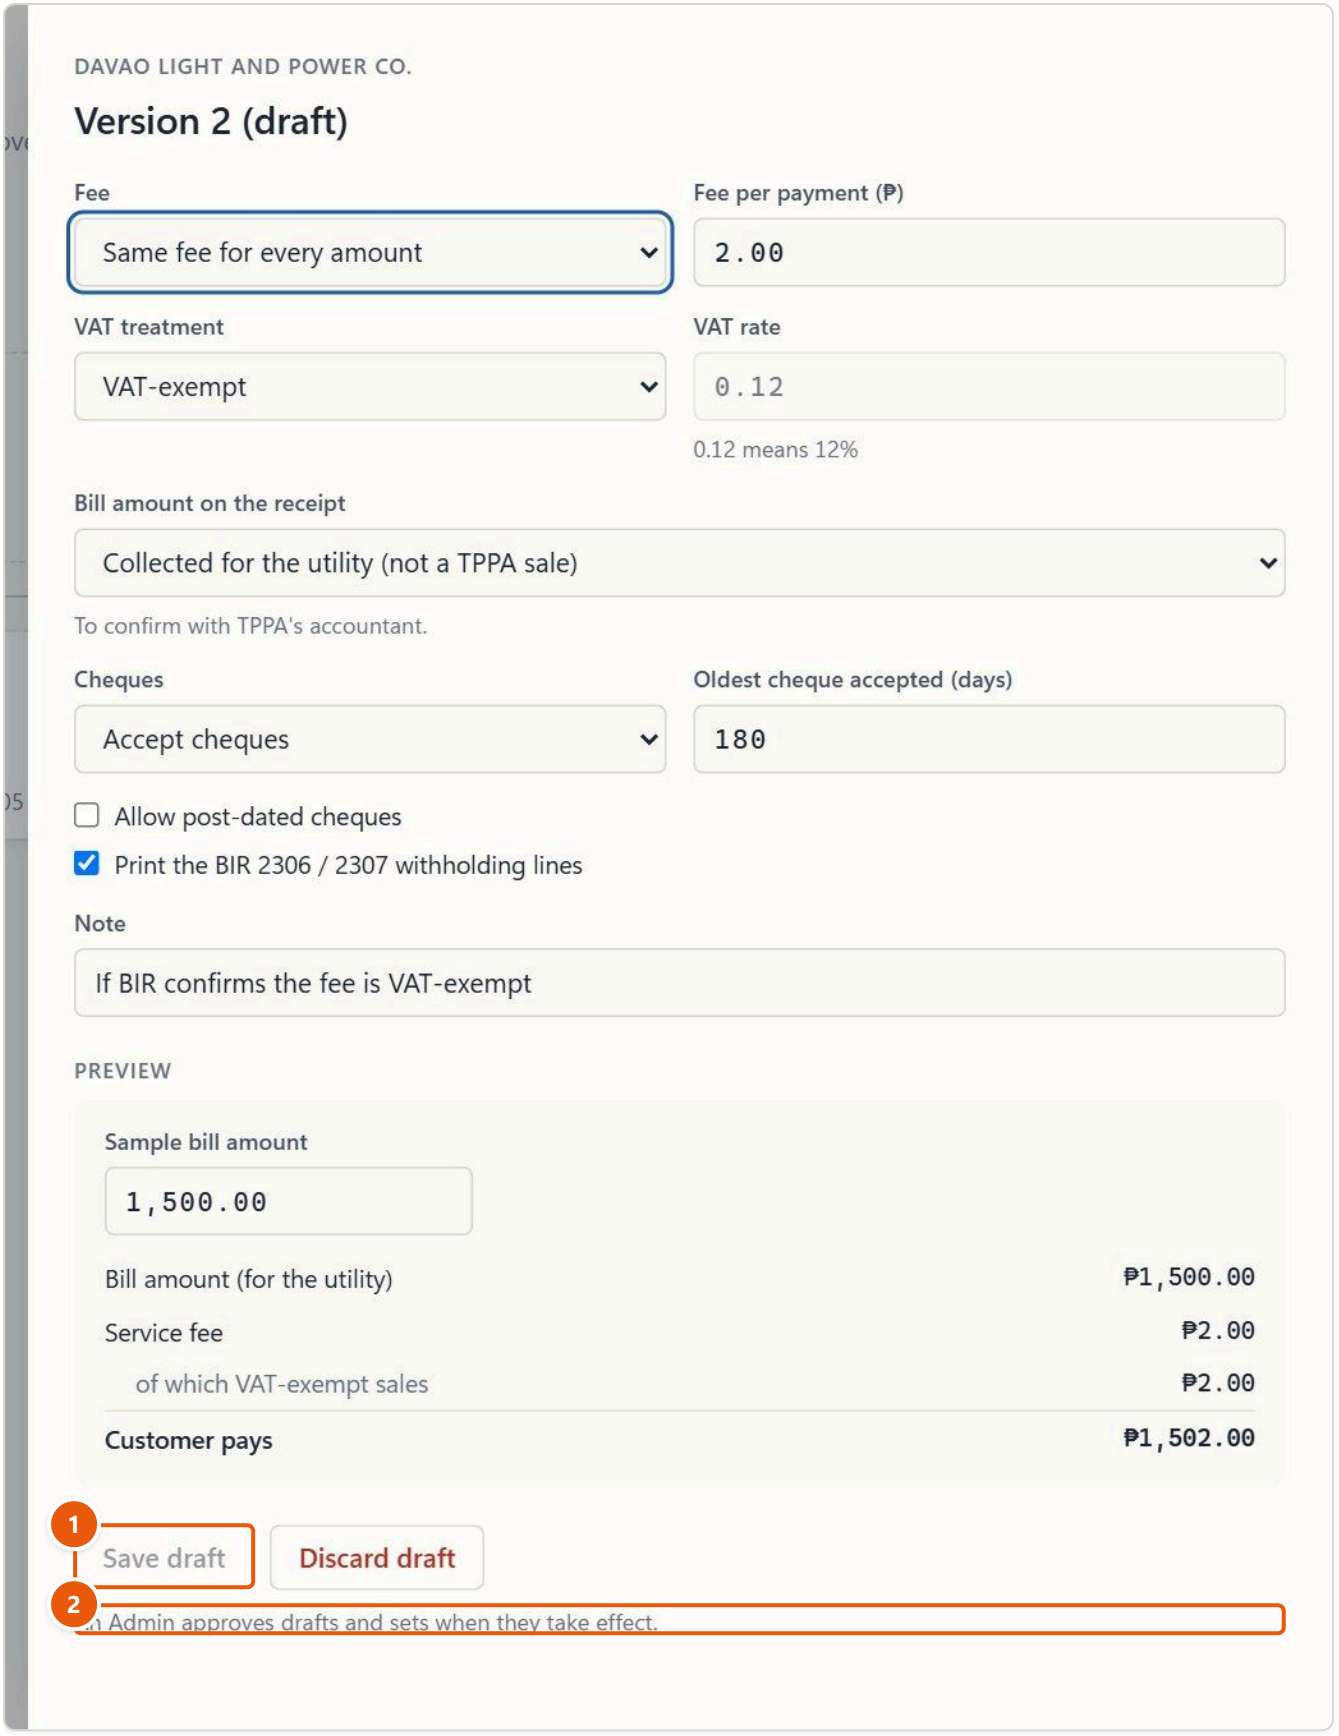

1. Why this version
2. Try a bill amount
3. What the customer would pay
4. Save draft
5. Save and approve...

The preview follows as you type (here as an admin: Accounting has Save draft only).

6. Click **Save draft**, and confirm with your password if asked.

As Accounting you have **Save draft** (1) and **Discard draft**, but no approve button. The drawer says "An Admin approves drafts and sets when they take effect." (2)

1 Save draft

2 An Admin approves it

Accounting edits drafts; an Admin approves them.

What happens next: the draft shows on the Overview as **Draft** for the admins. An admin opens it, checks it and approves it with a start time ("Approve and schedule"). Until then the version in force stays in force. **Discard draft** removes a draft you no longer want (it is kept as retired).

> **Note:** Fees are never part of the utility's collection files: the files carry the bill amounts only.

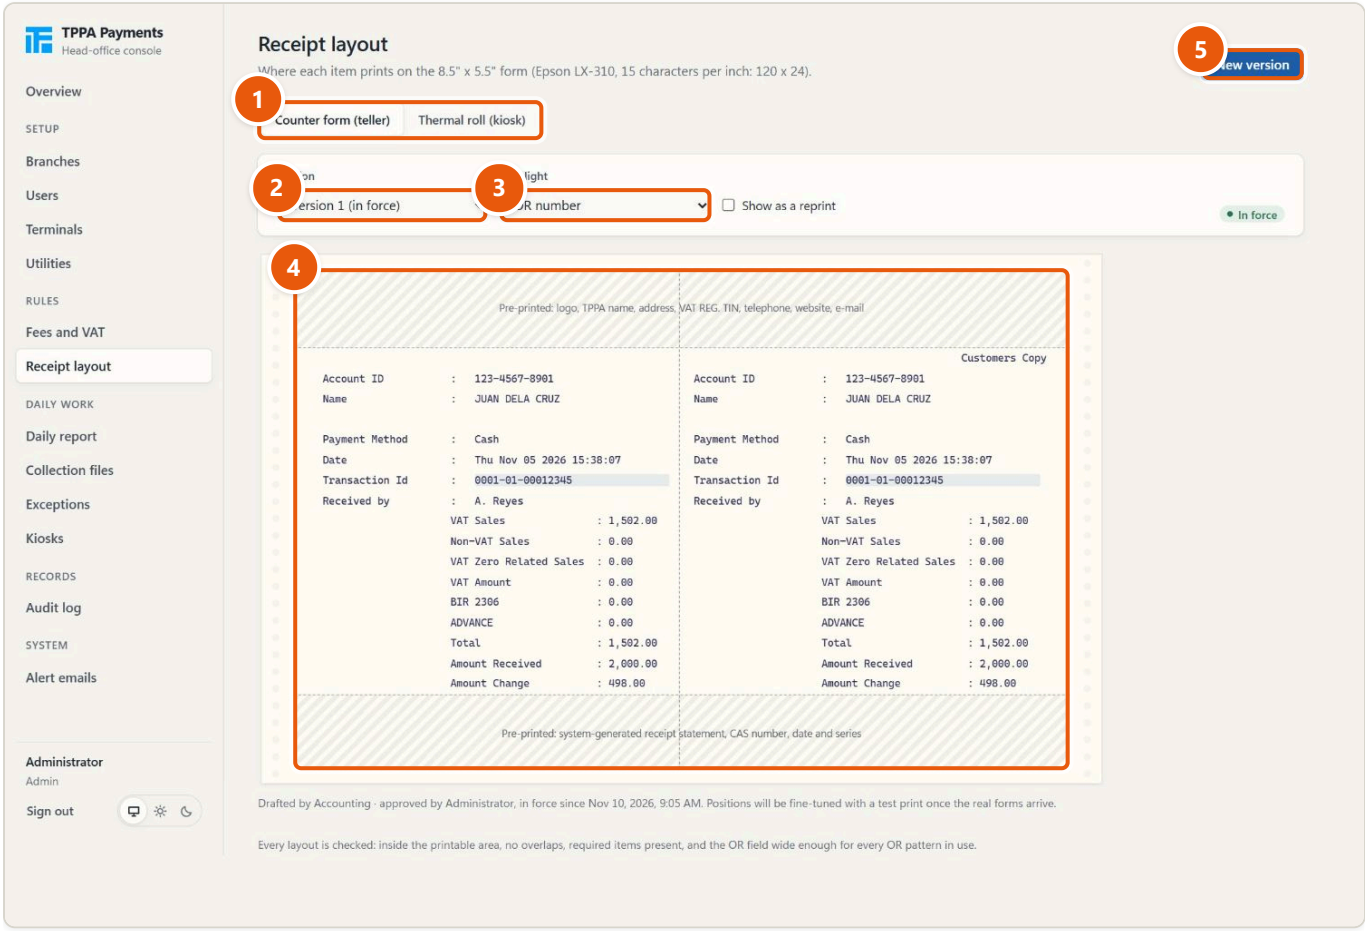

8. Proposing receipt layout changes

The **Receipt layout** page has two kinds of layout, chosen with the switch at the top (1):

- **Counter form (teller)**: where each item prints on the 8.5" x 5.5" pre-printed form of the Epson LX-310 at the counters;
- **Thermal roll (kiosk)**: the header and footer the kiosks print on their roll.

As with fees, Accounting proposes a new version as a draft, and an admin approves it.

The counter form

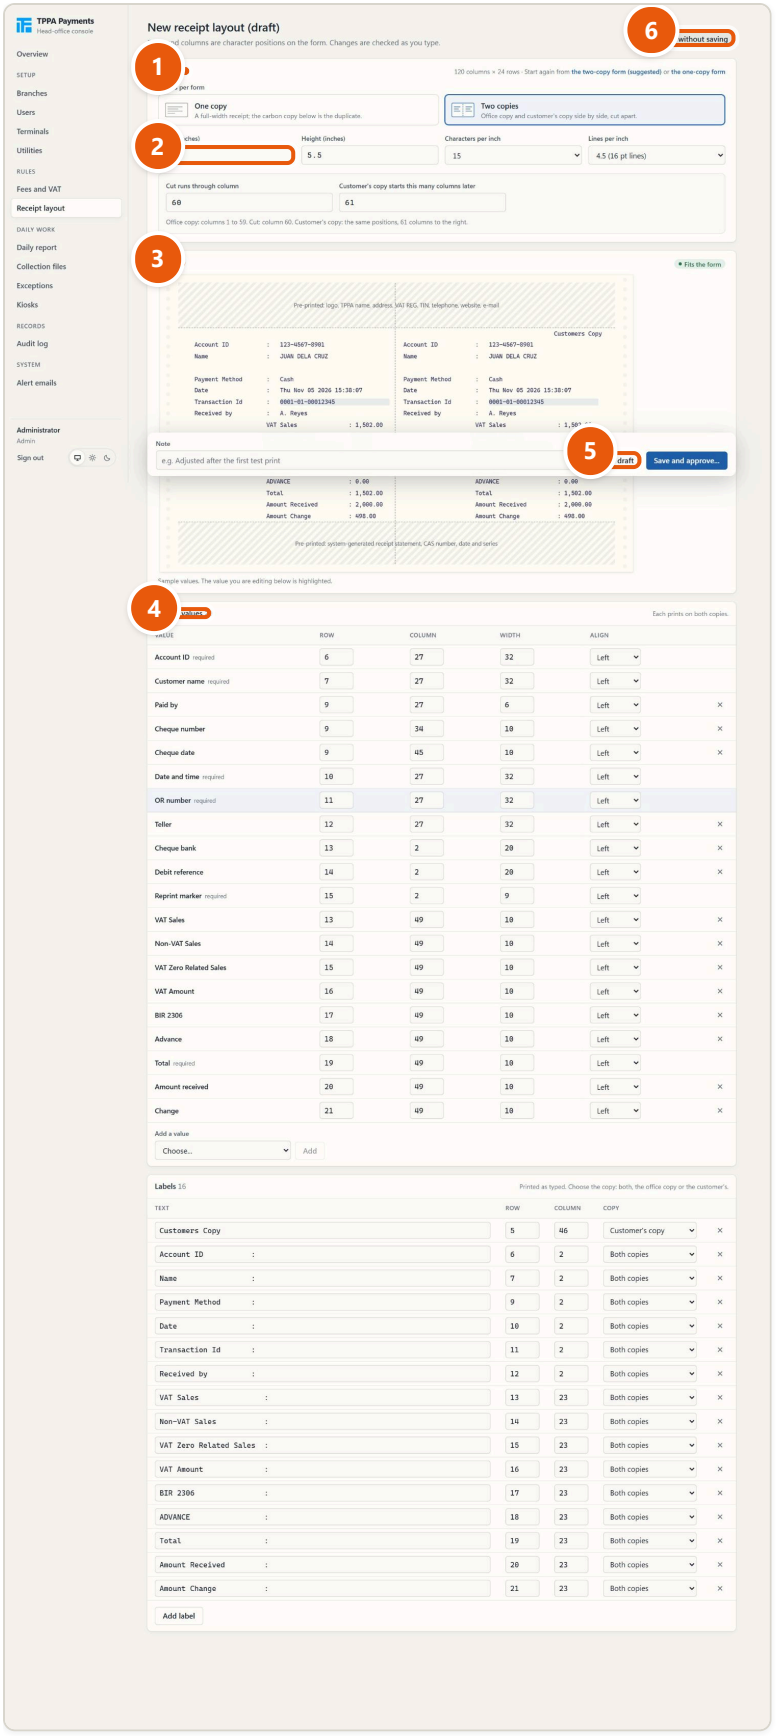

1. Counter form or thermal roll
2. Version
3. Highlight one item
4. Preview on the form
5. New version

The counter's pre-printed form.

The page shows the version in force (2) and a preview on the form (4). **Highlight** (3) picks out one item on the preview; "Show as a reprint" shows the REPRINTED mark.

To propose a change:

1. Click **New version** (5).
2. Set the form (1, 2): copies per form, width, height, characters and lines per inch.
3. Set where each value prints (4): row, column, width and alignment of each item. The preview (3) is checked as you type: inside the printable area, no overlaps, required items present, and the OR field wide enough for every OR pattern in use.
4. Write a note, then click **Save draft** (5). **Back without saving** (6) leaves the editor.

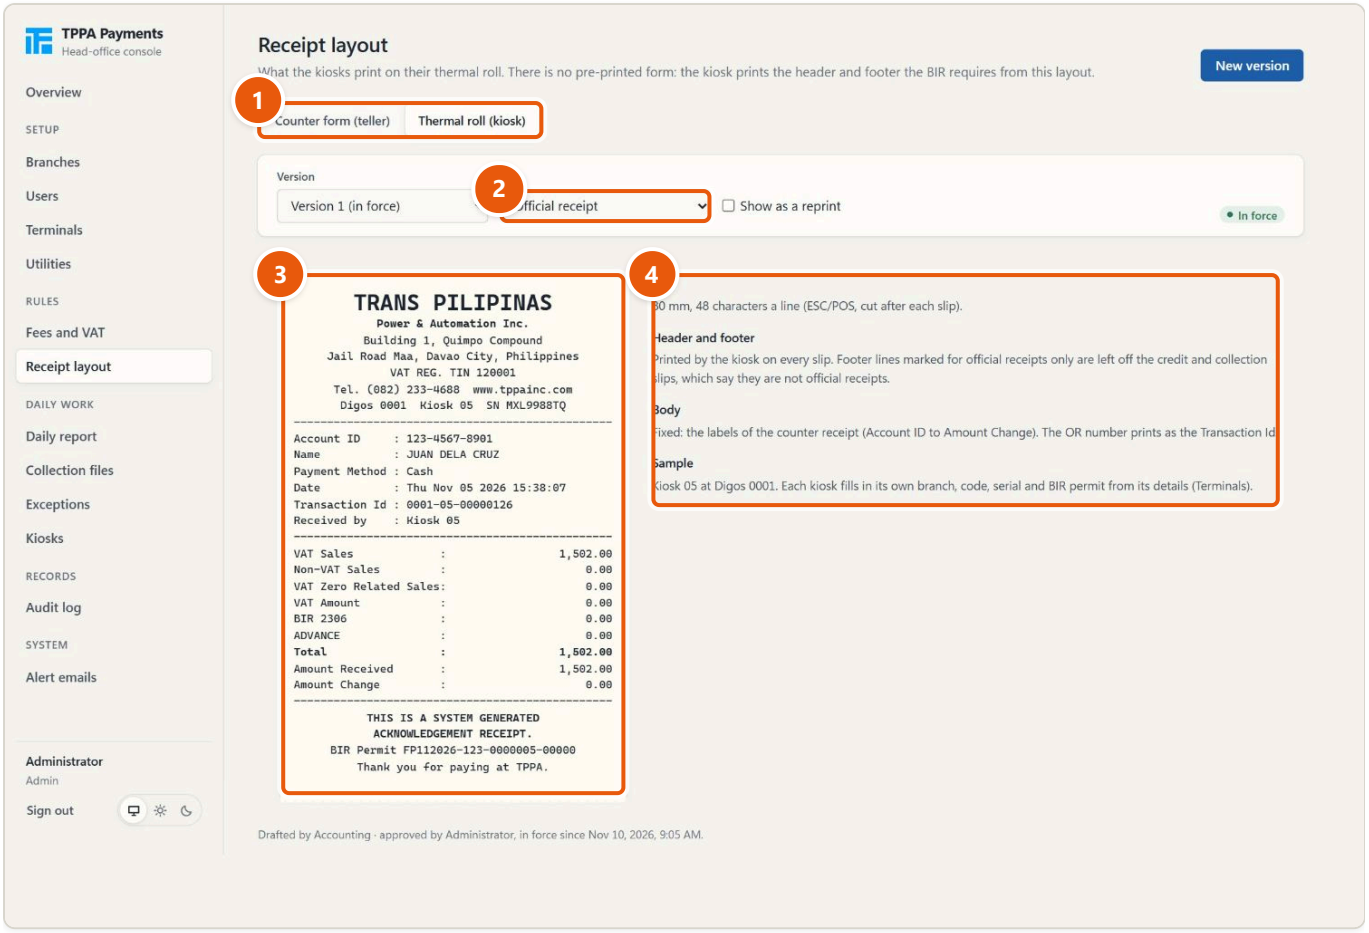

1. The form: size, copies, characters
2. Paper size
3. Preview, checked as you type
4. Where each value prints
5. Save draft
6. Back without saving

Editing a new counter form layout (left without saving).

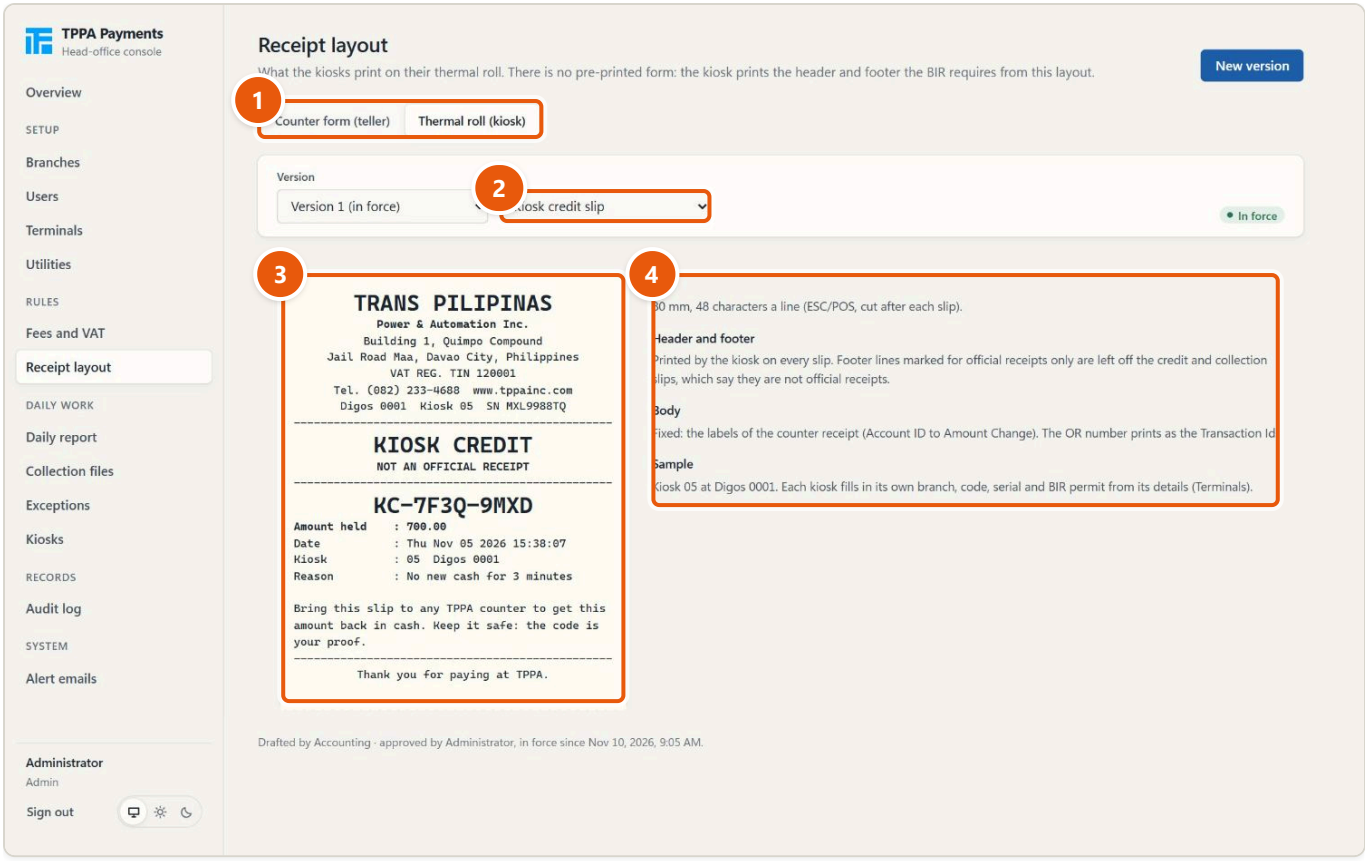

The thermal roll

Choose **Thermal roll (kiosk)** and a slip to preview: the official receipt, the kiosk credit slip or the cash collection slip.

1. Thermal roll (kiosk)
2. Slip: Official receipt
3. The roll as the kiosk prints it
4. What the roll holds

Thermal roll: Official receipt.

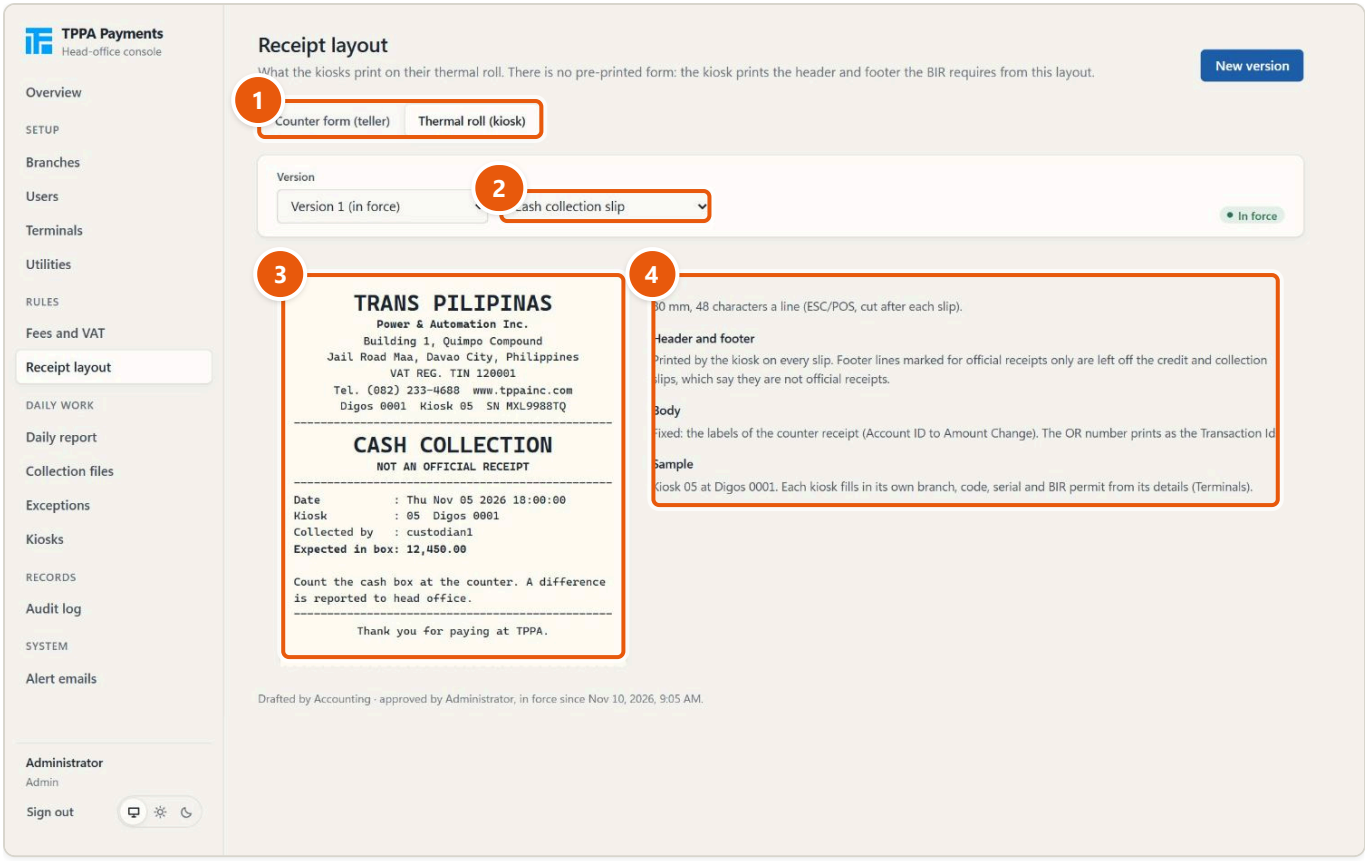

1 Thermal roll (kiosk)

2 Slip: Kiosk credit slip

3 The roll as the kiosk prints it

4 What the roll holds

Thermal roll: Kiosk credit slip.

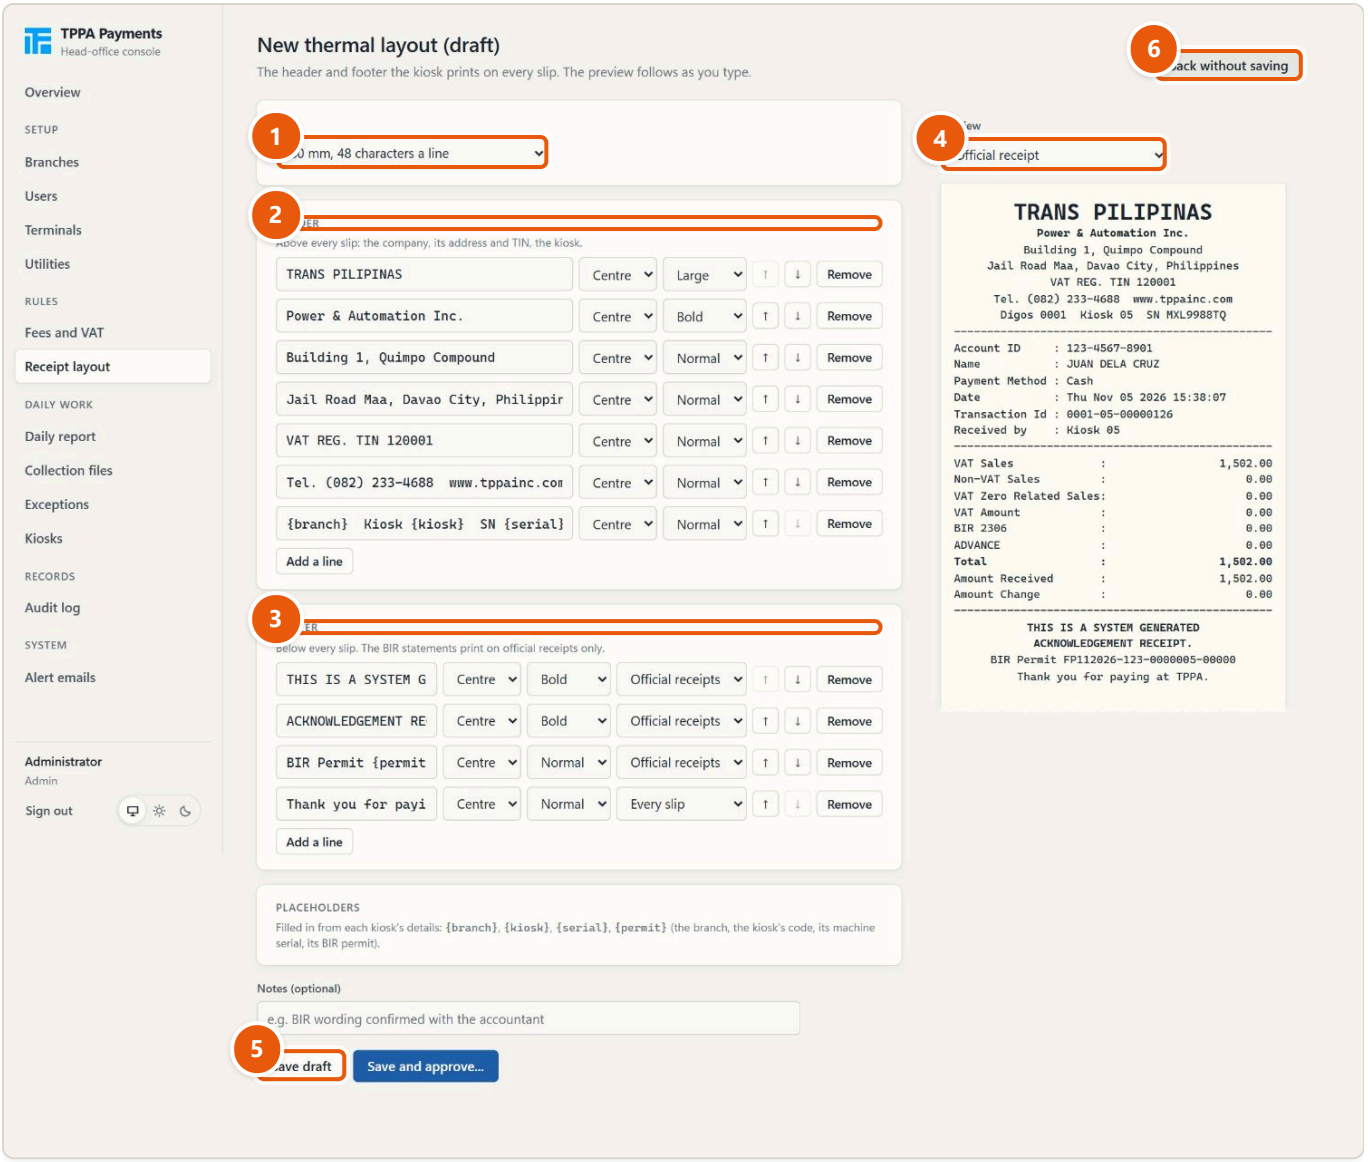

1. Thermal roll (kiosk)
2. Slip: Cash collection slip
3. The roll as the kiosk prints it
4. What the roll holds

Thermal roll: Cash collection slip.

To propose a change, click **New version**:

1. Choose the roll width (1): 80 mm (48 characters a line) or 58 mm (32 characters a line).
2. Edit the **header lines** (2) and the **footer lines** (3): text, left/centre/right, normal, bold or large; move them up or down, remove them, or **Add a line**. A footer line prints on every slip or only on official receipts.
3. Check a slip in the preview (4).
4. Click **Save draft** (5), or **Back without saving** (6).

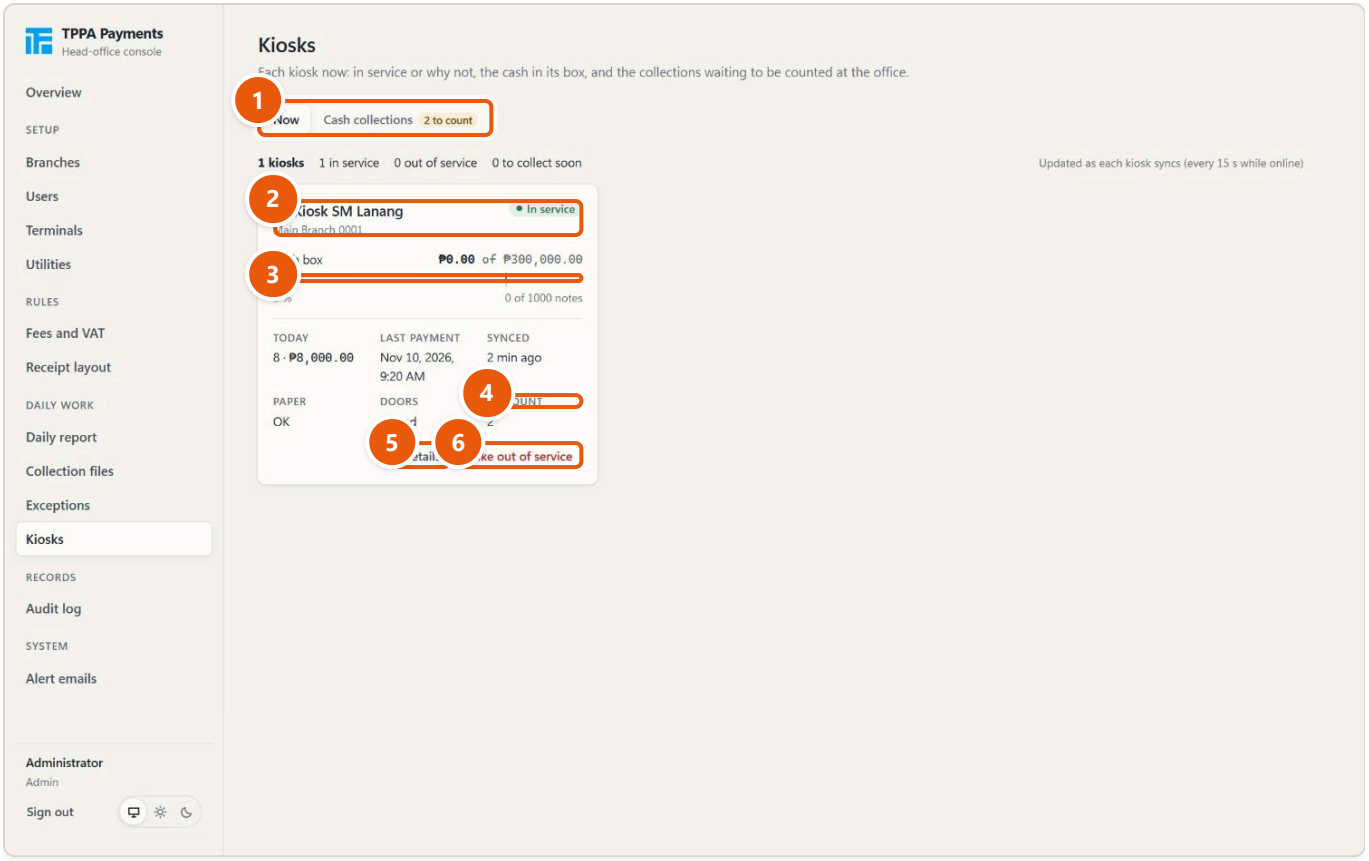

1. Roll width
2. Header lines
3. Footer lines
4. Preview a slip
5. Save draft
6. Back without saving

Editing a new thermal layout (left without saving).

What happens next is the same as for a fee: an admin approves the draft and sets when it takes effect; the counters and kiosks receive it at their next sync.

9. The Kiosks page

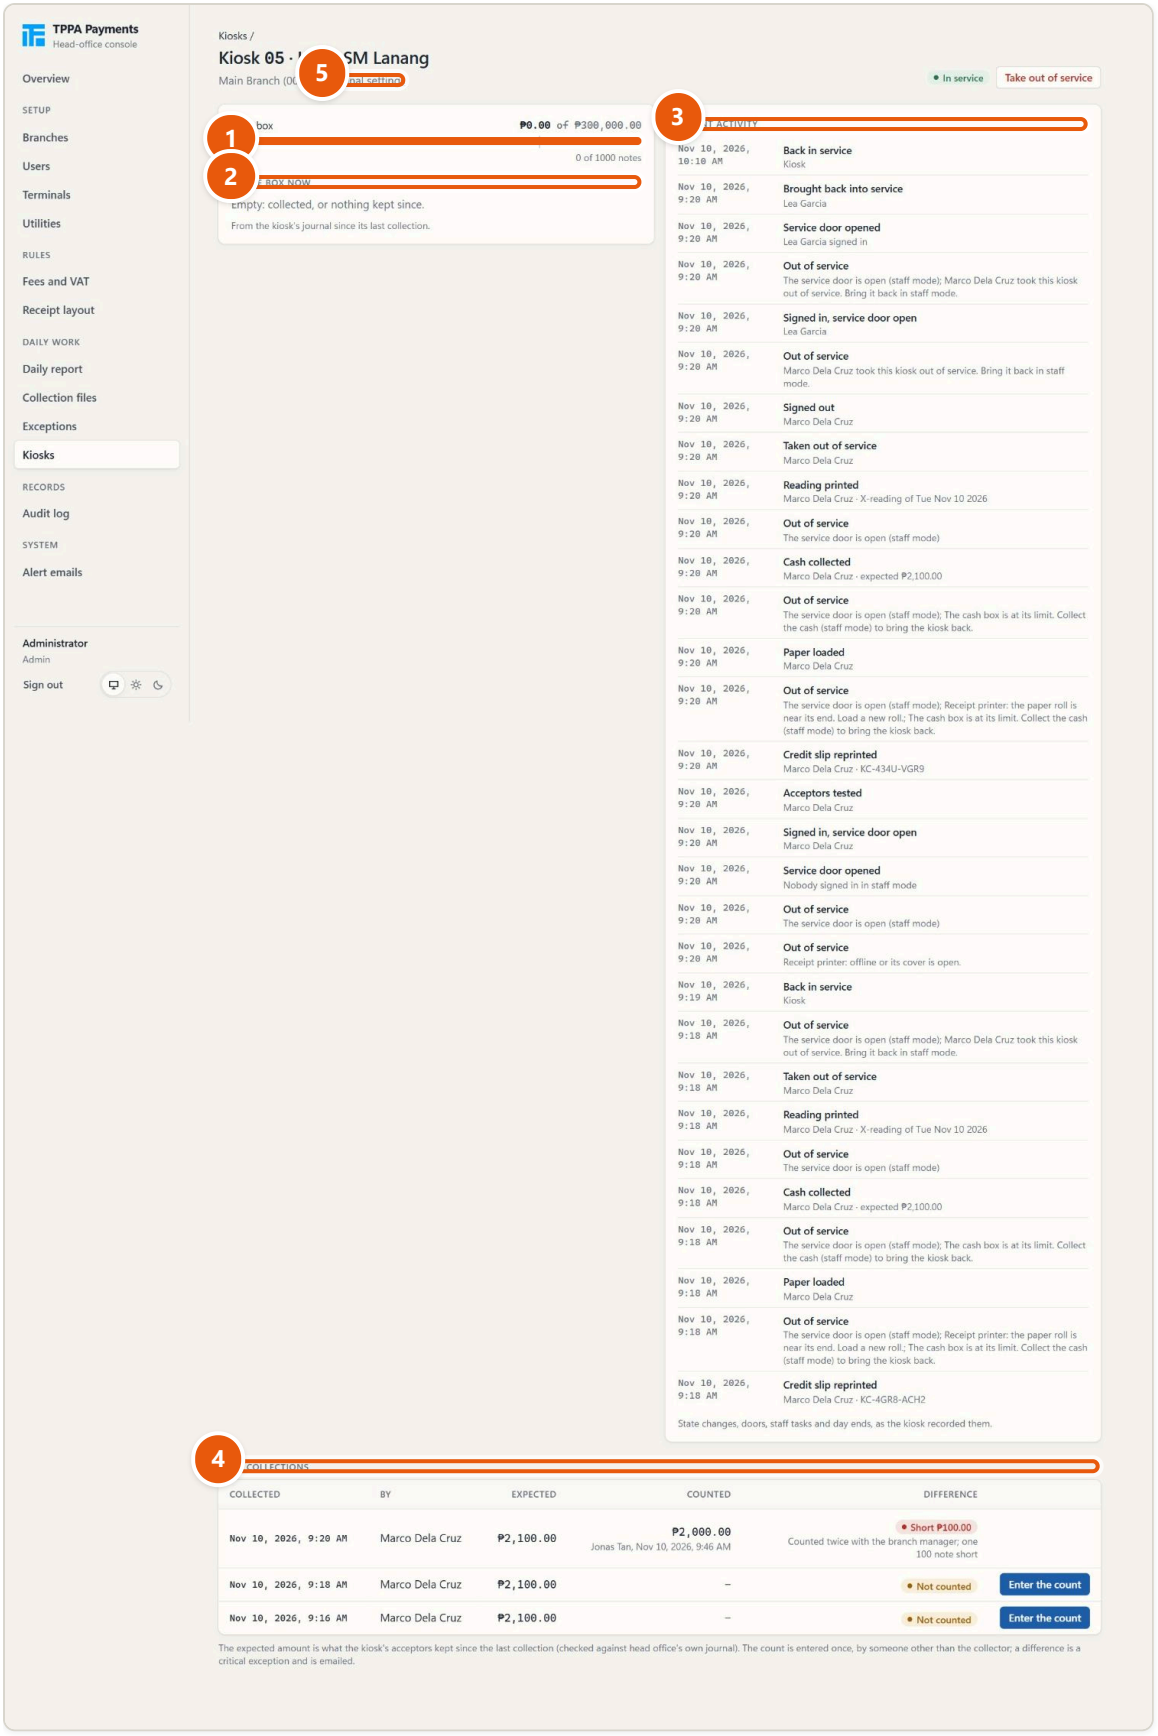

Kiosks shows "Each kiosk now: in service or why not, the cash in its box, and the collections waiting to be counted at the office." It has two tabs (1): **Now** and **Cash collections**, with the number of boxes still to count.

1. Now, or the cash collections
2. The kiosk and its state
3. Cash box against its limit (collect at 75 %)
4. Boxes waiting for the office count
5. Details
6. Take out of service

Kiosks, Now (here as an admin: Accounting has no Take out of service button).

Each kiosk's card (2) shows its state (In service, Out of service, Not heard from…), the cash box against its limit (3: collect at 75 %), today's payments, the last payment, the last sync, paper, doors, and **TO COUNT** (4): boxes waiting for the office count. **Details** (5) opens the kiosk:

1. Cash box now
2. In the box, by note and coin
3. Recent activity
4. This kiosk's collections
5. Its terminal page

One kiosk in detail.

The detail page shows the cash box now (1), what is in it by note and coin (2), the recent activity as the kiosk recorded it (3) and this kiosk's cash collections (4).

Accounting can see the kiosks and count their boxes. Taking a kiosk out of service (6 in the Now picture) is for admins and branch managers.

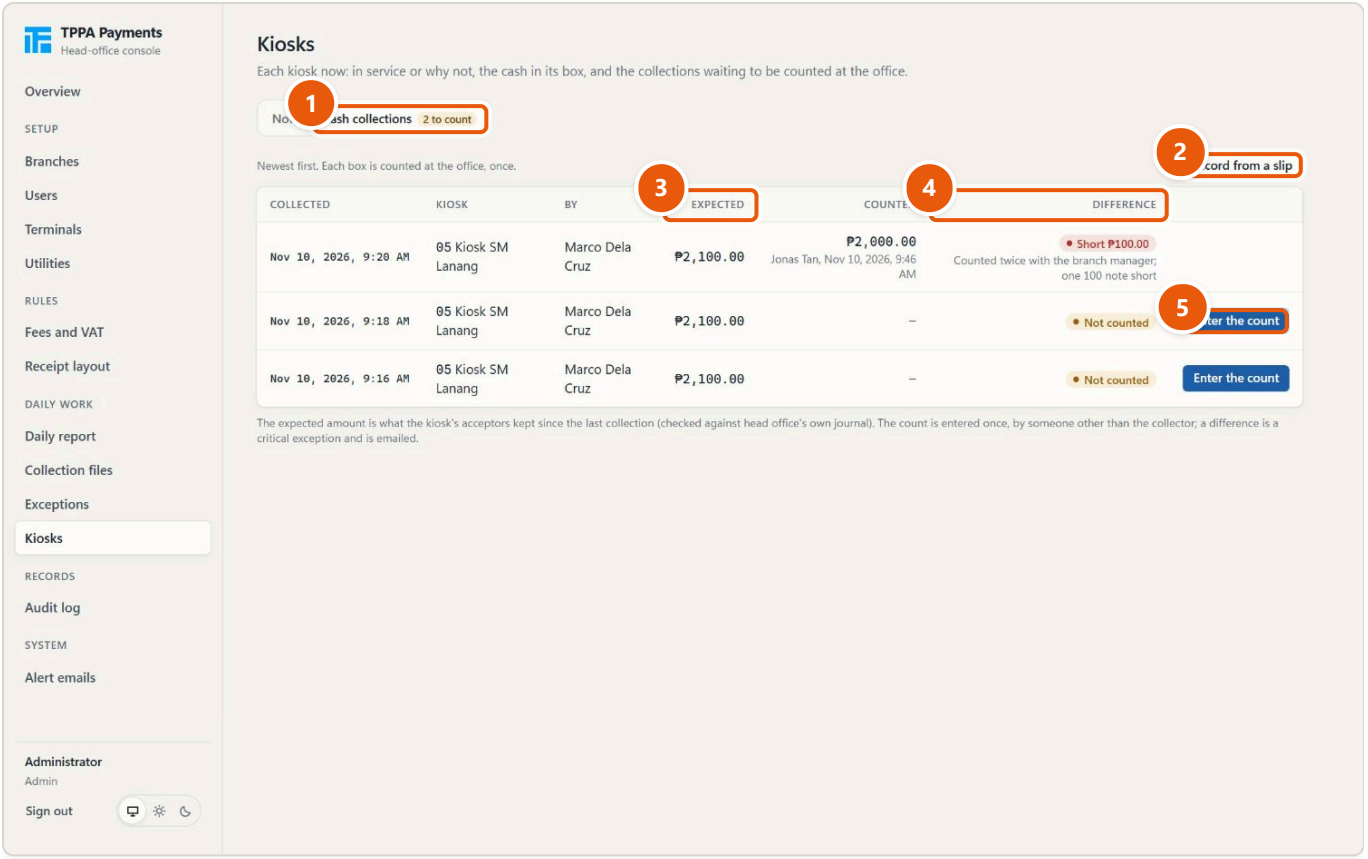

10. Counting the kiosk boxes

When: each time a custodian brings a collected kiosk box to the office.

A kiosk takes cash only, and gives no change. When its box is collected, the custodian swaps it for an empty one in staff mode and the kiosk prints a cash collection slip. The full box is counted at the office, once, by someone other than the collector, and the count is entered in the console.

The cash collections

Click **Kiosks**, then **Cash collections** (1). The list is newest first; "Each box is counted at the office, once."

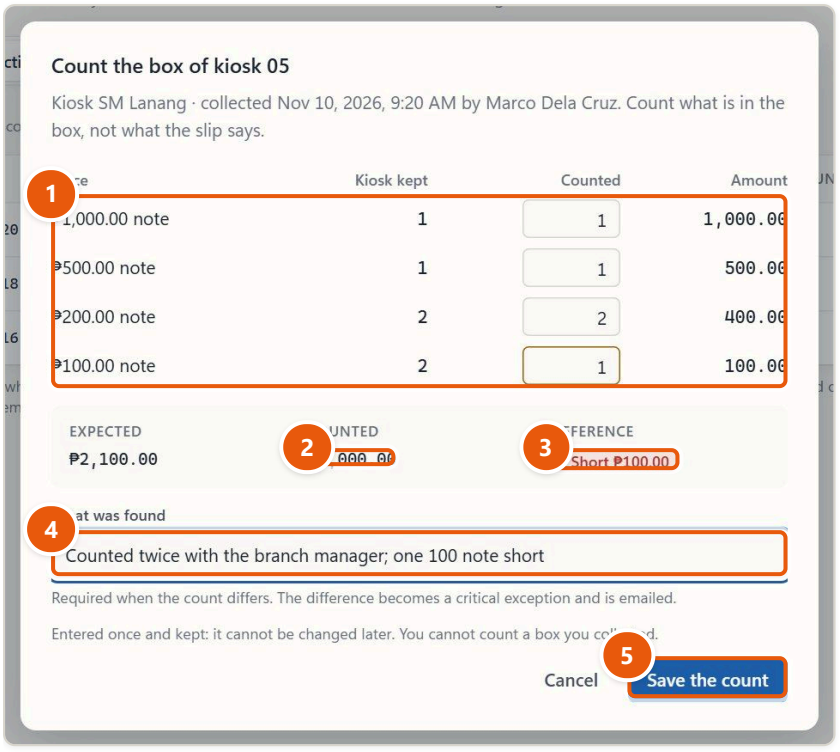

1. Cash collections (to count)
2. Record from a slip
3. What the kiosk kept
4. Matches, short or over
5. Enter the count

Column | What it means |

| ---------- | ---------- | | COLLECTED | When the box was taken out | | KIOSK | Which kiosk | | BY | Who collected it | | EXPECTED (3) | What the kiosk's acceptors kept since the last collection | | COUNTED | The office count, with who counted and when | | DIFFERENCE (4) | Matches, Short or Over, once counted; "Not counted" before |

Entering the count

1. Open the box and count what is in it, note by note and coin by coin.
2. On the box's line, click **Enter the count** (5).
3. The dialog "Count the box of kiosk 05" shows when it was collected and by whom: "Count what is in the box, not what the slip says." For each note and coin (1), the kiosk's own figure ("Kiosk kept") is shown; type what you counted in **Counted**.
4. Check the **COUNTED** total (2) and the **DIFFERENCE** (3) against the **EXPECTED** amount.
5. If the count differs, write in **What was found** (4) what you found, at least 5 characters. It is required when the count differs.
6. Click **Save the count** (5), and confirm with your password if asked.

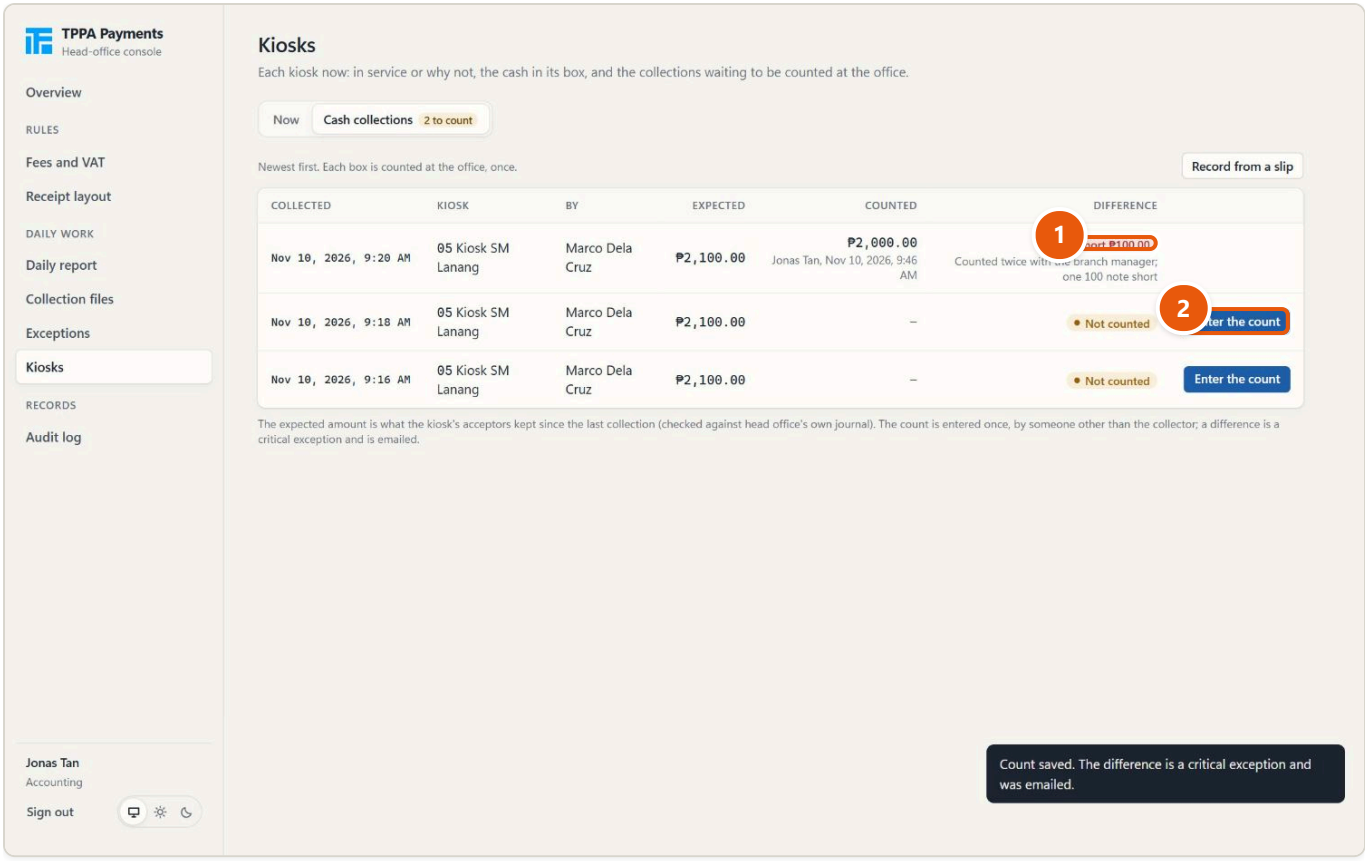

1. Count each note and coin in the box
2. Counted total
3. Difference against what the kiosk kept
4. Required when it differs
5. Save the count

Accounting counts a collected box: one ₱100 note short.

In the example one ₱100.00 note is missing: expected ₱2,100.00, counted ₱2,000.00, "Short ₱100.00", with the note "Counted twice with the branch manager; one 100 note short".

When the count matches, the console says "Count saved: it matches." When it differs: "Count saved. The difference is a critical exception and was emailed." The line keeps the count, who counted and when, and the difference with the note (1); the other boxes are still to count (2):

1 Counted short, with the note

2 The other boxes still to count

The count is kept; the difference is a critical exception and is emailed.

The difference then appears on the Exceptions page as **Kiosk box counted over/short** (Critical), to be looked into and resolved with a note.

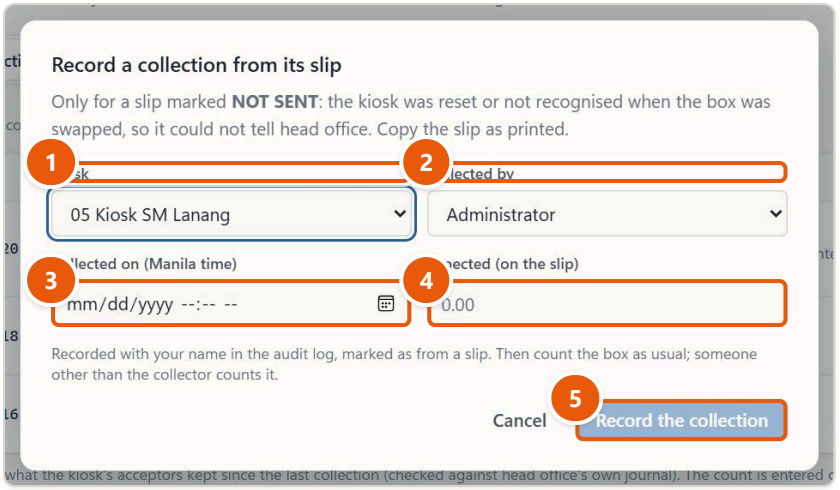

> **Important:** The count is entered once and kept: it cannot be changed later ("This box is already counted"). Count carefully, twice if needed, before you save.

Never count a box you collected. If you collected the box yourself, the line says "You collected it: someone else counts it" instead of **Enter the count**, and the server refuses with "You collected this box: someone else counts it". This is the four-eyes rule.

Recording a collection from a NOT SENT slip

Sometimes the kiosk could not tell head office about a collection (it was reset, or not recognised, when the box was swapped). Its slip is then marked **NOT SENT**, and the box is not in the list. Record it from the slip first:

1. On **Cash collections**, click **Record from a slip**.
2. Copy the slip as printed: the **Kiosk** (1), **Collected by** (2: only people who may service that kiosk are offered), **Collected on (Manila time)** (3) and **Expected (on the slip)** (4).
3. Click **Record the collection** (5), and confirm with your password if asked.

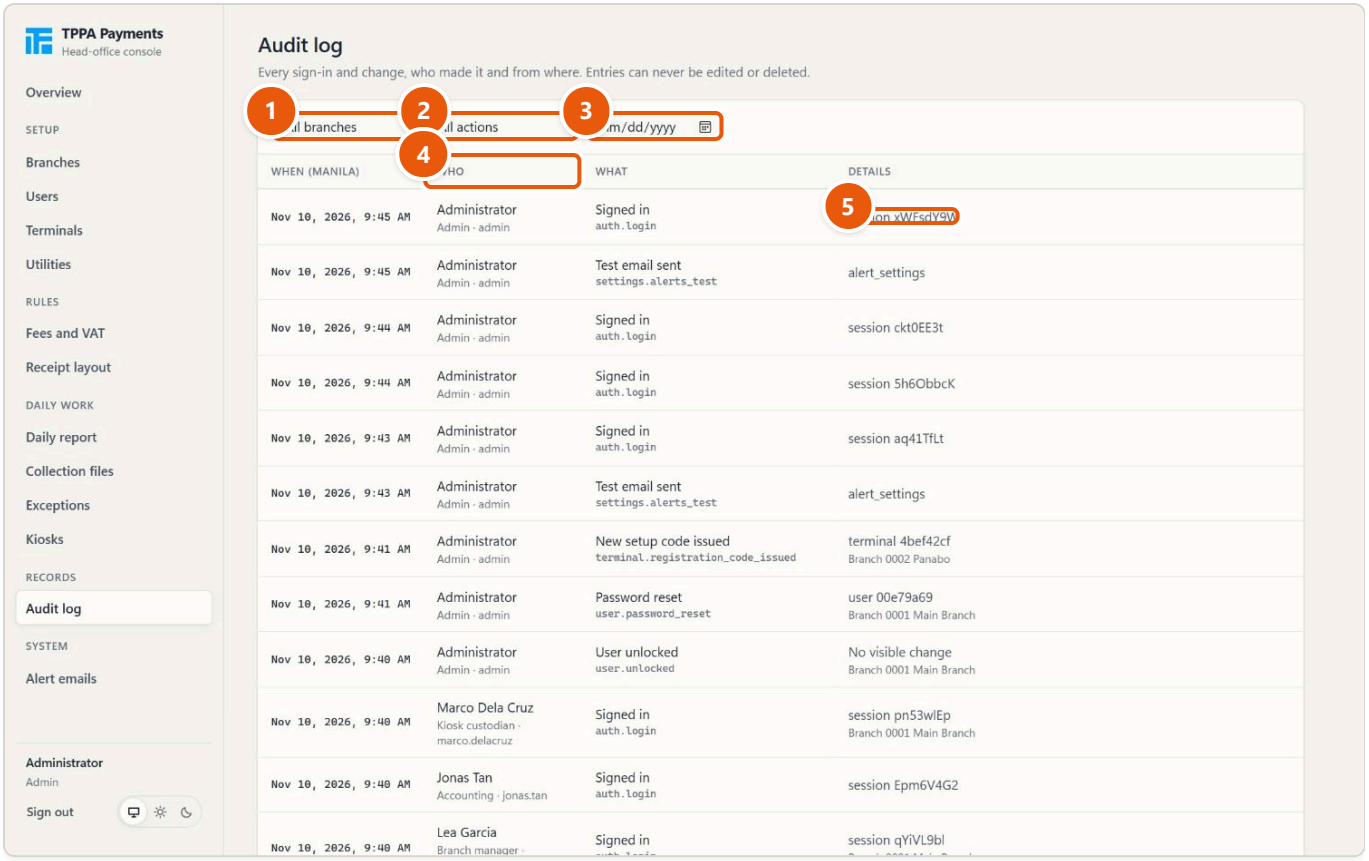

1. Kiosk
2. Who collected it
3. When (Manila time)
4. Expected, as on the slip
5. Record the collection

Only for a slip marked NOT SENT (left with Cancel here).

The collection is recorded with your name in the audit log and shows a "From slip" tag. Then count the box as usual; someone other than the collector counts it. Use this only for a slip marked NOT SENT.

11. The Audit log

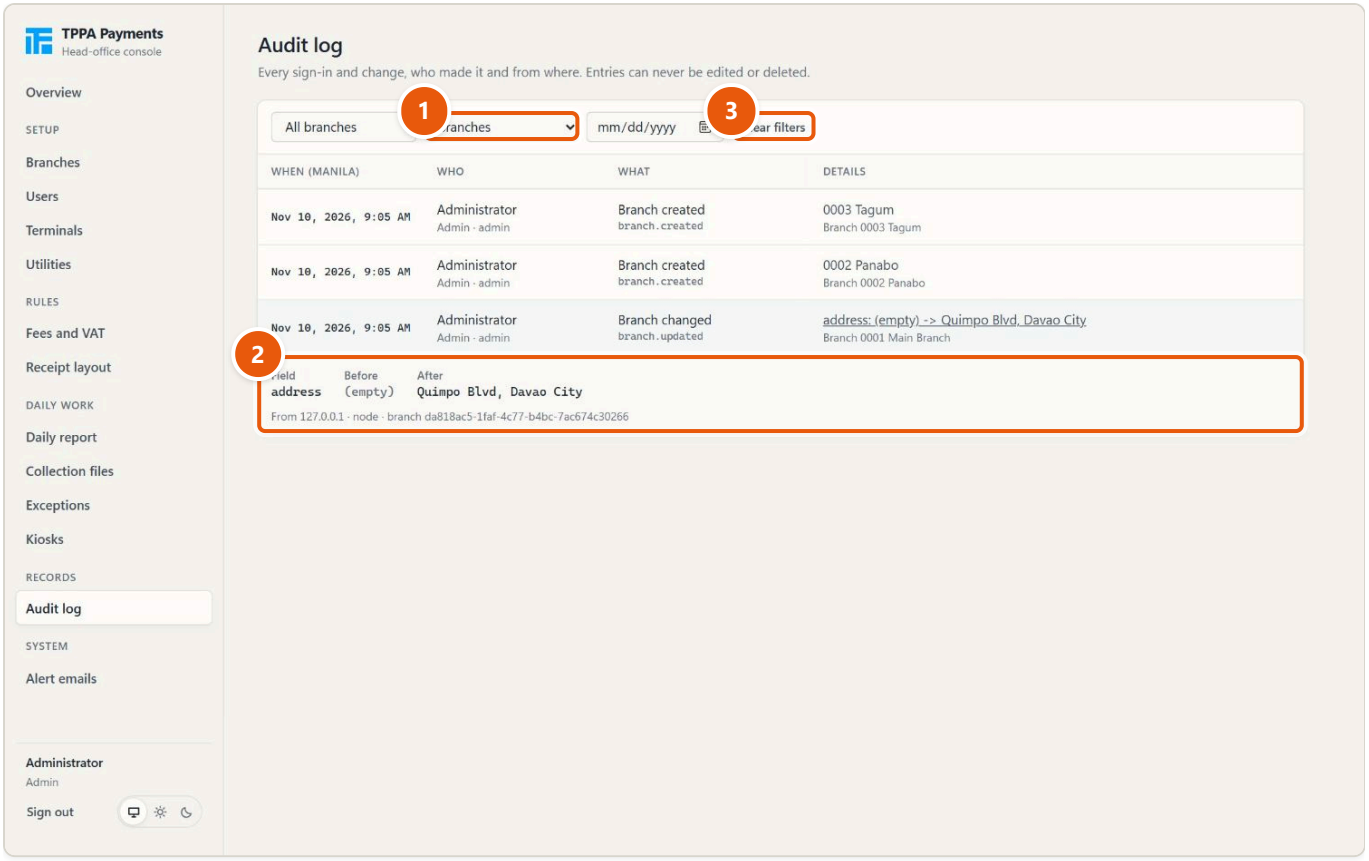

The **Audit log** lists "Every sign-in and change, who made it and from where. Entries can never be edited or deleted." It is read-only, newest first.

1. Branch
2. Kind of action
3. Day
4. Who, with role and username
5. Click for the details

The audit log, newest first.

1. Filter by **Branch** (1), **Kind of action** (2: for example Sign-ins, Fees and VAT, Receipt layout, Collection files, Exceptions, Kiosk credits) and **Day** (3).
2. Each entry shows when (Manila time), who, with role and username (4), what was done, and a short summary.
3. Click an entry (5) to see the details: each field before and after, and the computer's address and browser.
4. **Show older entries** at the end loads more; **Clear filters** starts again.

1 Only branch changes

2 Field, before and after; address and browser

3 Clear filters

An entry opened: what changed.

12. Alert emails you may receive

An admin keeps the list of people who receive the alert emails. If your address is on it, you receive:

- **Critical problems**, within minutes: subject "TPPA alert: N critical problem(s)". Each problem with its branch, terminal, time and message, and a link to Exceptions. Examples: a fee that does not match, an OR number used twice, a Z-reading that does not add up, a void approved by the wrong person, a kiosk's cash door opened without staff, a kiosk box counted over or short.
- **Kiosk notices**, within minutes: subject "TPPA kiosk notice: ...". A kiosk out of service for 30 minutes, a cash box at 75 % of its limit, a kiosk not heard from for an hour. Each is sent once, not repeated.
- **The daily report** of the previous business day, sent from 7:00 AM Manila time: subject "TPPA daily report [date]: N critical, N to check" or "all in order". It lists each branch's payments, amounts, fees, voids, how many terminals closed the day and the collection files made, then the problems and checks of the day, with links to Exceptions and the Daily report.

Ask an admin to add or remove your address.

13. When something is not right

What you see	What to do
"Waiting for every terminal to close the day." on Collection files	Wait for the day end at the terminals named, or ask the branch manager or an admin to make the files with a reason
"Payments changed since batch N"	Generate again once every terminal has closed (or ask the branch manager or an admin); send the new current batch
A terminal "Not closed" on a past day	Call the branch: the teller closes it at the counter (Day end); days close in order
A cash difference on the Daily report	It was approved by the branch manager at the counter; check with the branch, then resolve the "Cash over/short" exception with a note
"Kiosk box counted over/short"	Check with the collector and the branch manager, then resolve it with a note
"You collected it: someone else counts it"	Ask a colleague in Accounting, or an admin, to count it
A kiosk credit stays open	It closes only when a counter refunds it; nothing to do by hand
Your account is locked	Wait 15 minutes, or ask an administrator to unlock it

For anything else, see the Troubleshooting guide.

14. Quick reference

Task	Where
See today per branch	Overview, TODAY
See what waits for you	Overview, NEEDS YOUR ATTENTION
A branch's day, terminal by terminal	Daily report, choose branch and day
Make the day's files	Collection files, choose branch and day, **Generate files** (every terminal closed)
Download the files	Collection files, click the .TXT and .RPT names of the **Current** batch
Make the files again after a change	Collection files, **Generate again**
Look into problems	Exceptions, Problems reported by sync
Resolve a problem	Exceptions, **Resolve**, write what was found or done
Propose a new fee	Fees and VAT, choose the utility, **New version**, **Save draft**
Propose a new receipt layout	Receipt layout, Counter form or Thermal roll, **New version**, **Save draft**
Count a collected kiosk box	Kiosks, Cash collections, **Enter the count**, **Save the count**
A slip marked NOT SENT	Kiosks, Cash collections, **Record from a slip**, then count
Who did what	Audit log, filter, click an entry

Task	Where
Light or dark screen	Theme switch, bottom of the menu
Leave the console	**Sign out**, bottom of the menu
