16 When a teller cannot close the day

17 Quick reference

1. About this guide

This guide is for the **branch manager** of one TPPA branch. You work in three places:

1. **At the teller counter**, in the teller app: you approve what needs a second person (voids, opening float corrections, cash differences at the day end, kiosk credit refunds) by typing your own username and password on the teller's screen. You can also take payments and close a day like a teller.
2. **In the head-office console**, in a web browser: your branch's Daily report, its collection files (also before every terminal has closed, with a reason), its exceptions, its kiosks and its audit log.
3. **At the kiosk**, in staff mode: you may sign in like a kiosk custodian.

You see only your own branch. You cannot change fees, receipt layouts, users, terminals or utilities, and you do not count the collected kiosk boxes: head office does (Admin and Accounting guides).

The screenshots come from a demonstration system: every name, account, amount and code in them is made up. The branch manager in them is **Lea Garcia** (lea.garcia) of the Main Branch (0001); the tellers are **Ana Reyes** (Counter 1) and **Ben Cruz** (Counter 2).

2. The four-eyes rule

Anything that changes what a drawer should hold, or cancels a receipt, needs **two people**: the person signed in at the counter asks, and a branch manager approves with their own password.

- The approver must be a **different person** from the one signed in. If you are signed in at the counter yourself, another branch manager must approve your void, float correction, cash difference or refund.
- The approver must be an **active branch manager of this branch**. A teller, a custodian or a head-office admin cannot approve at the counter.
- Approving does not sign you in: the teller stays signed in.
- Your password is checked like a sign-in, with the same lockout: 5 wrong passwords lock your account for 15 minutes.

The messages you may see when an approval is refused:

Message	Why
"A different person must approve a void: the branch manager signs with their own password."	The username typed is the person signed in. The same message ends "…a float correction", "…the cash difference" or "…a refund" for the others.
"Ben Cruz is not a branch manager. Only a branch manager can approve a void."	The person typed is not a branch manager. For a refund: "… is not a branch manager of this branch. Only a branch manager can approve a refund."
"Wrong username or password."	Type them again. The password field is emptied.
"This account is locked after too many wrong passwords. Wait 15 minutes, or ask an administrator to unlock it."	Your account is locked.

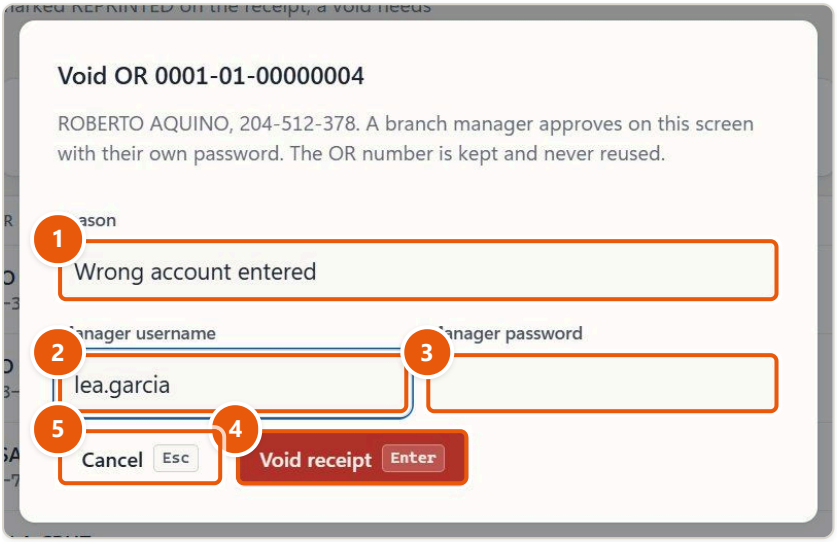

Message	Why
"Enter the branch manager's username and password."	The approval fields were left empty.

Without the network, the counter checks your password against what it remembers from your last online sign-in or approval on that computer (within the offline window, 36 hours unless head office set another). If you never signed in or approved there online, it says: "The server cannot be reached, and you have not signed in online on this terminal before. Connect to the network and sign in once, or ask a colleague who has." A kiosk credit refund always needs the network.

3. At the counter: approving a void

When: a teller printed a receipt that must be cancelled, for example the wrong account. A void is possible only on the same counter and only while its day is not closed.

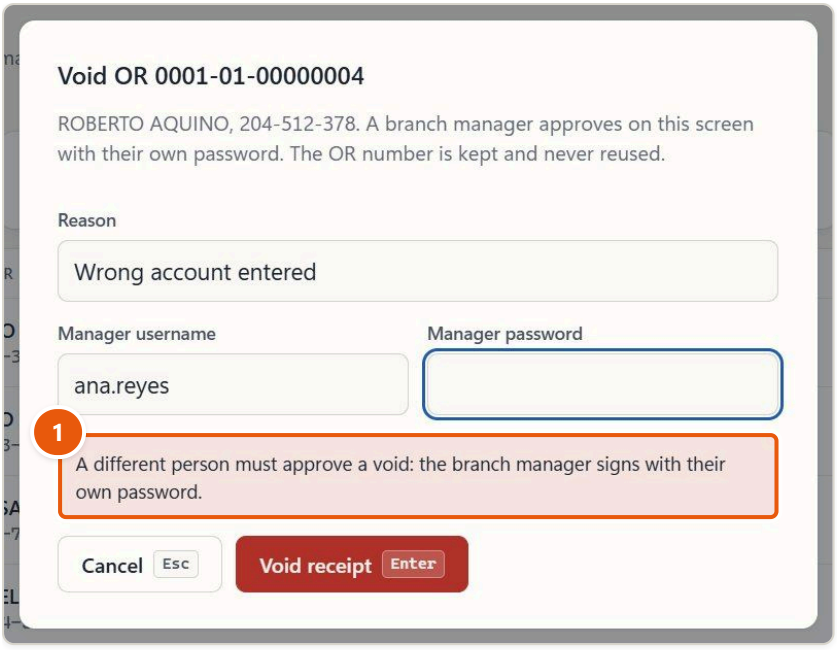

1. The teller opens **Today** (`F7`), finds the receipt and clicks **Void**.
2. The teller types the **Reason** (1), e.g. "Wrong account entered".
3. You type your **Manager username** (2) and your **Manager password** (3).
4. Press **Void receipt** (`Enter`) (4). **Cancel** (`Esc`) (5) leaves it.

1. Why the receipt is voided
2. Branch manager: username
3. Branch manager: own password
4. Void receipt (Enter)
5. Cancel (Esc)

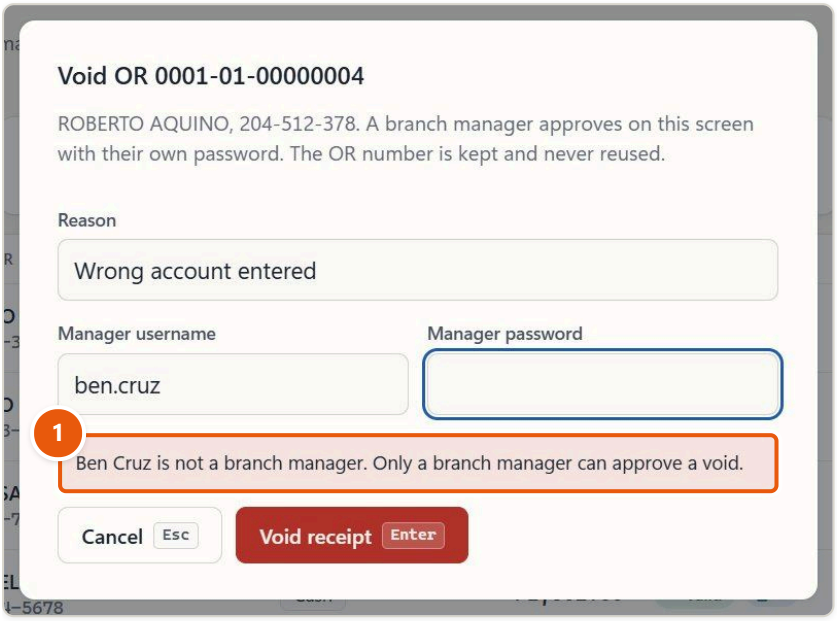

The dialog says: "A branch manager approves on this screen with their own password. The OR number is kept and never reused."

If the teller types their own username, the void is refused:

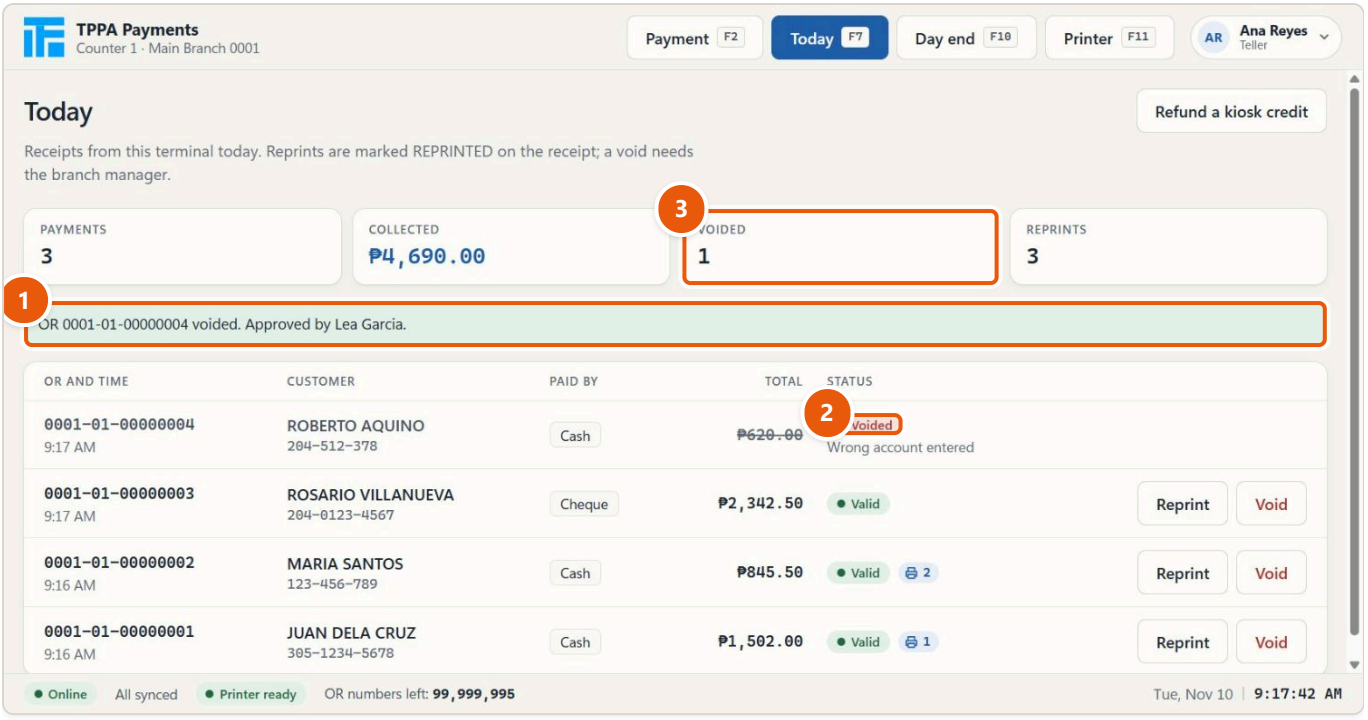

1 Refused: a different person must approve

If someone who is not a branch manager types theirs:

1 Refused: only a branch manager

When it is approved, Today shows "OR 0001-01-00000004 voided. Approved by Lea Garcia." (1), the receipt marked **Voided** with its reason (2), and the count of voids today (3).

1 Voided, and who approved

2 Voided, with the reason

3 Voided today

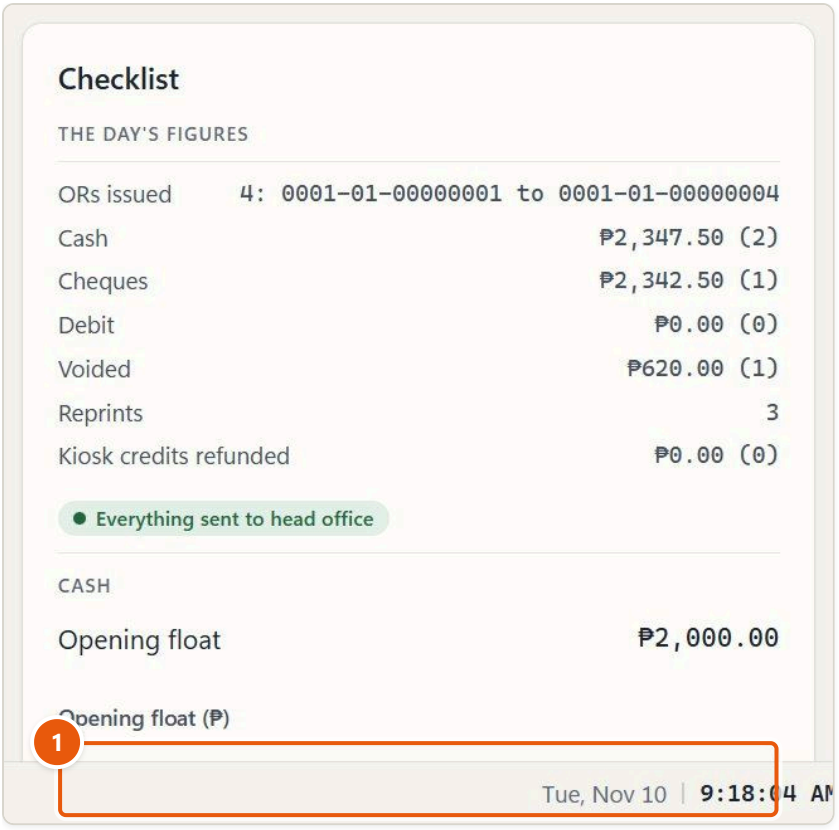

What happens next: head office receives the void with who asked and who approved it. It appears in the Daily report's **Voids** and as a "Void" check on the Exceptions page. Other refusals:

- No reason: 'Enter the reason for the void, e.g. "Wrong account entered".'
- The day is closed: "The day of OR … is closed, so it can no longer be voided here. Call head office."

4. At the counter: correcting the opening float

When: the teller declared the wrong opening float (the change fund) at the start of the day. The float is declared before the first payment, so it cannot be used later to cover a shortage; a correction needs you.

1. The teller opens **Day end** (`F10`) and clicks **Correct** next to **Opening float**.
2. The teller types the right float in **Opening float (₱)** (1).
3. You type your **Manager username** and **Manager password** under "A correction needs the branch manager".
4. The teller clicks **Save float**.

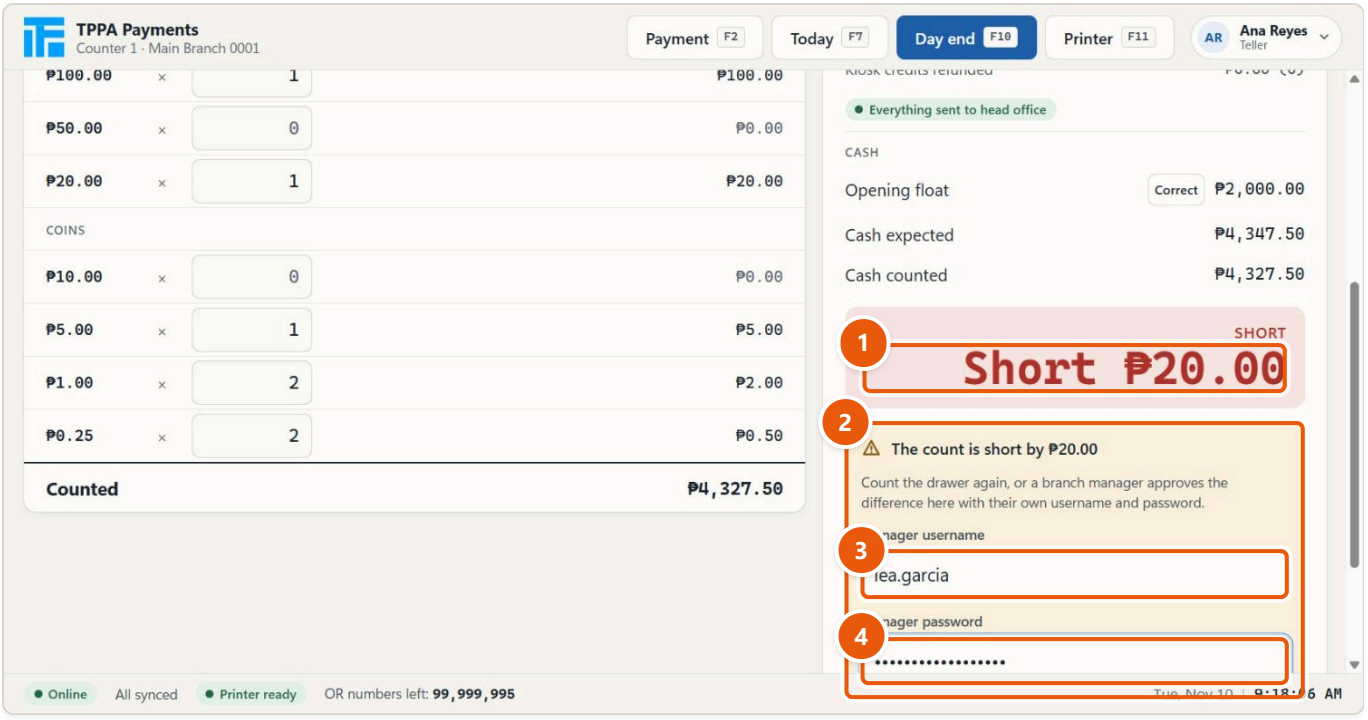

1 The right float

The cash expected is worked out again from the new float. Without your username and password the counter says: "Today's opening float is already recorded (₱…). A branch manager approves a correction."

5. At the counter: approving a cash difference at the day end

When: the teller counted the drawer at the day end and the count does not match the cash expected (opening float plus cash taken, less kiosk credits refunded at that counter).

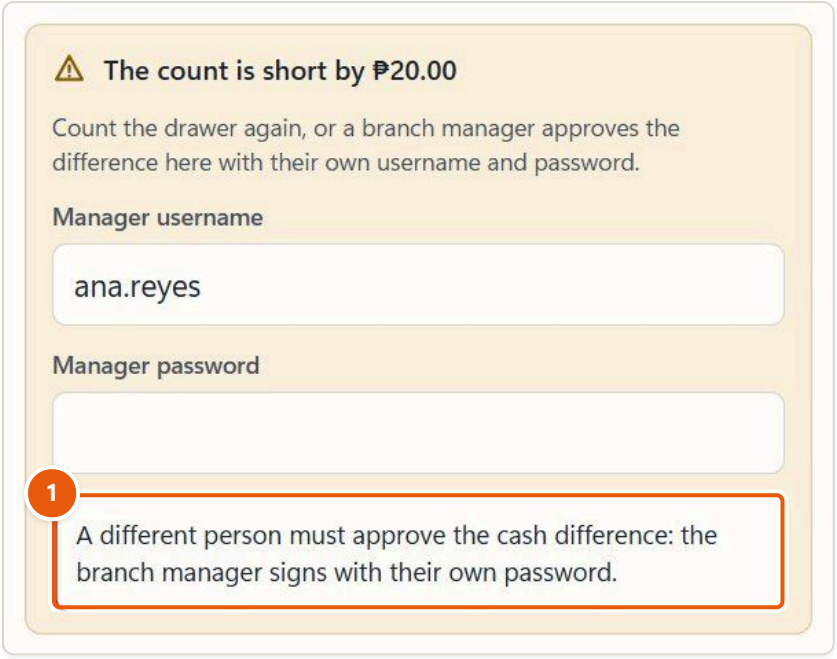

The Day end screen shows "Short" or "Over" with the amount (1), and the box "The count is short by ₱20.00": "Count the drawer again, or a branch manager approves the difference here with their own username and password." (2)

1. Short: the difference
2. Count again, or the manager approves
3. Branch manager: username
4. Branch manager: password

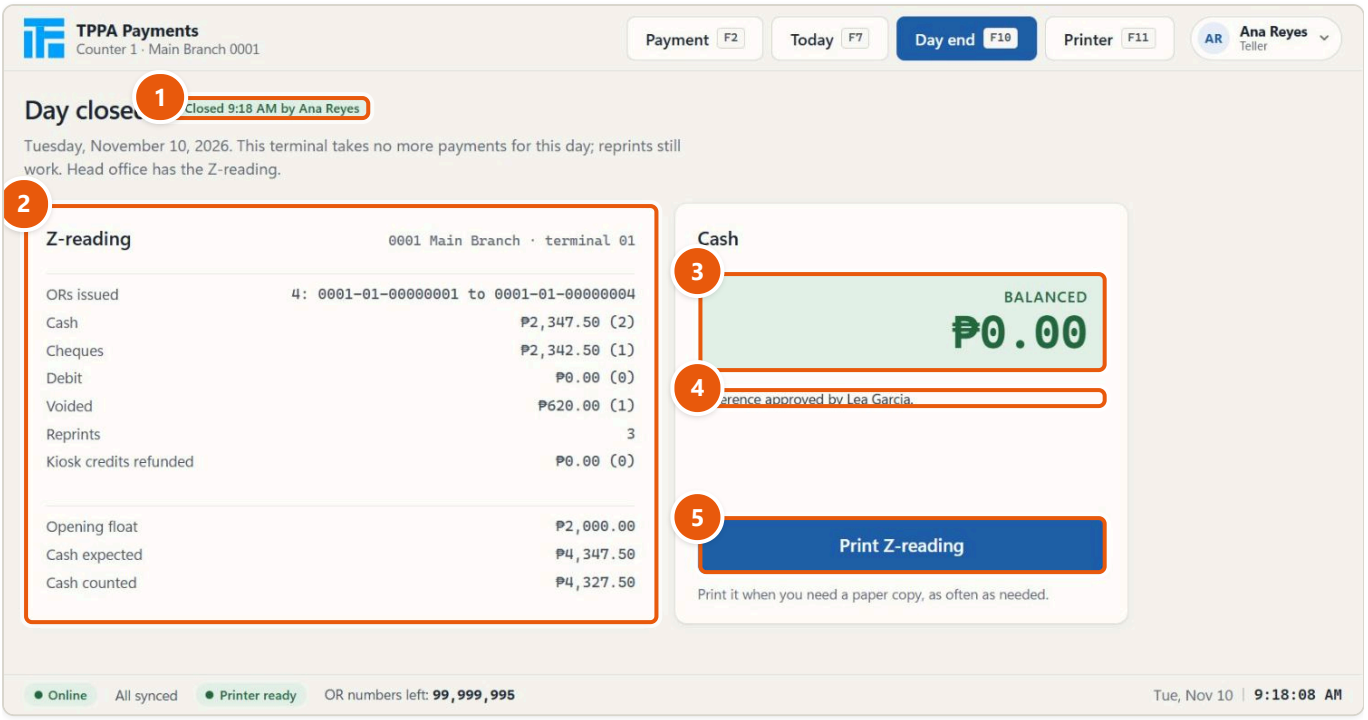

1. First ask the teller to count the drawer again. If the count then matches, the difference disappears and the teller closes the day without you.
2. If it still differs and you accept it, type your **Manager username** (3) and **Manager password** (4).
3. The teller presses **Approve and close day**.

If the teller types their own username:

1. Refused: a different person must approve

When it is approved, the day closes. The screen shows when and by whom (1), the Z-reading (2), the cash difference (3) and "Difference approved by Lea Garcia." (4). The Z-reading can be printed (5) as often as needed.

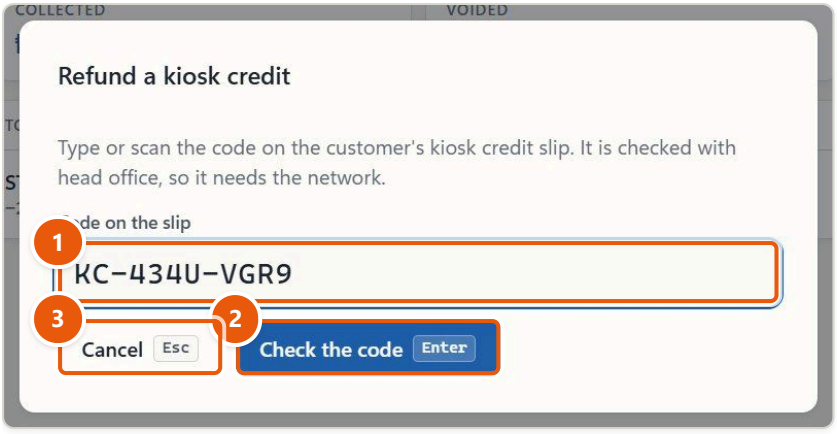

1. Closed: when and by whom
2. The Z-reading
3. The cash difference
4. Who approved the difference
5. Print Z-reading

What happens next: head office receives the Z-reading with your name as the approver. The Daily report shows the difference with "approved by" you, and the Exceptions page has a "Cash over/short (approved)" line for head office to check. After closing, the counter takes no more payments for that day; reprints still work.

6. At the counter: approving a kiosk credit refund

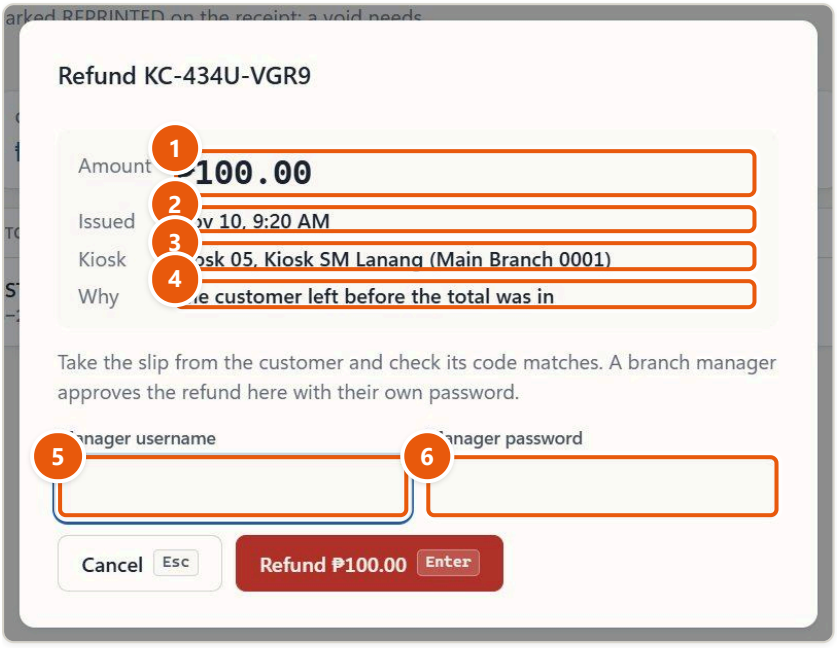

When: a customer brings a **kiosk credit slip**. A kiosk prints one when it kept cash it could not turn into a payment (for example the customer left before the total was in). The slip's code is checked with head office, so this needs the network, and each credit is paid only once.

1. The teller opens **Today** (`F7`), clicks **Refund a kiosk credit**, types or scans the code on the slip (1), and presses **Check the code** (`Enter`) (2).

1. The code on the slip: KC-434U-VGR9
2. Check the code (Enter)
3. Cancel (Esc)

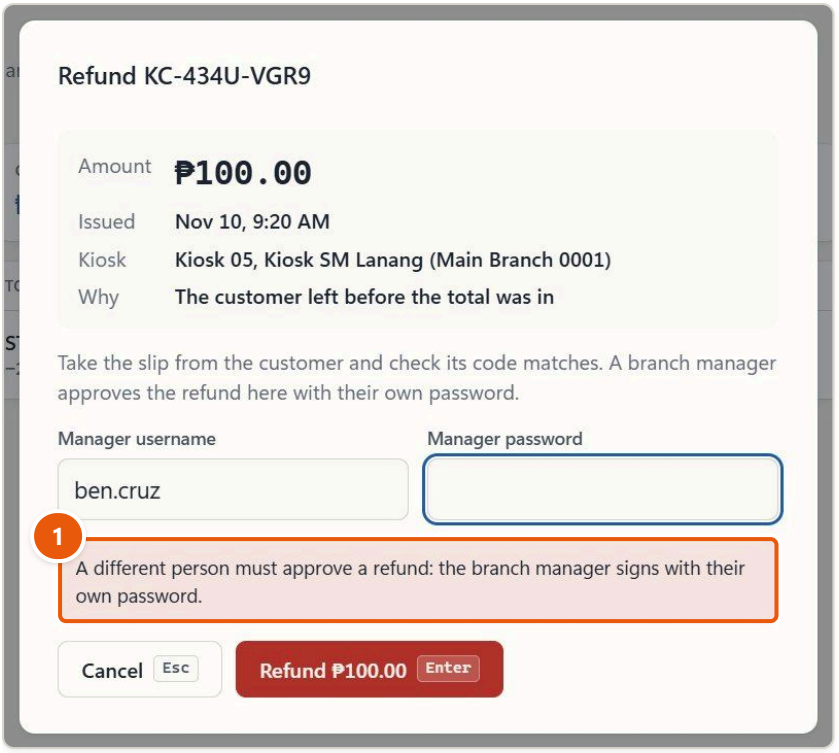

2. Head office answers with what the credit is worth (1), when the kiosk issued it (2), which kiosk and branch (3) and why the kiosk kept the cash (4). Nothing changes yet. "Take the slip from the customer and check its code matches. A branch manager approves the refund here with their own password."

1. What the credit is worth
2. When the kiosk issued it
3. Which kiosk, which branch
4. Why the kiosk kept the cash
5. Branch manager: username
6. Branch manager: own password

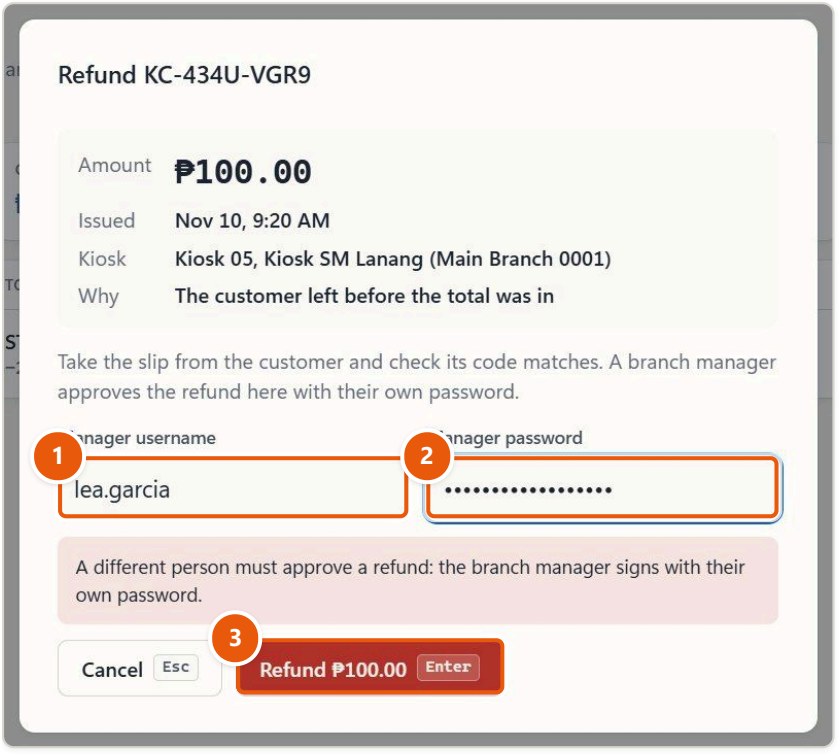

3. Check the slip in the customer's hand against the screen. Then type your **Manager username** (5) and **Manager password** (6).
4. Press **Refund ₱100.00** (`Enter`).

If the teller signed in types their own username, it is refused:

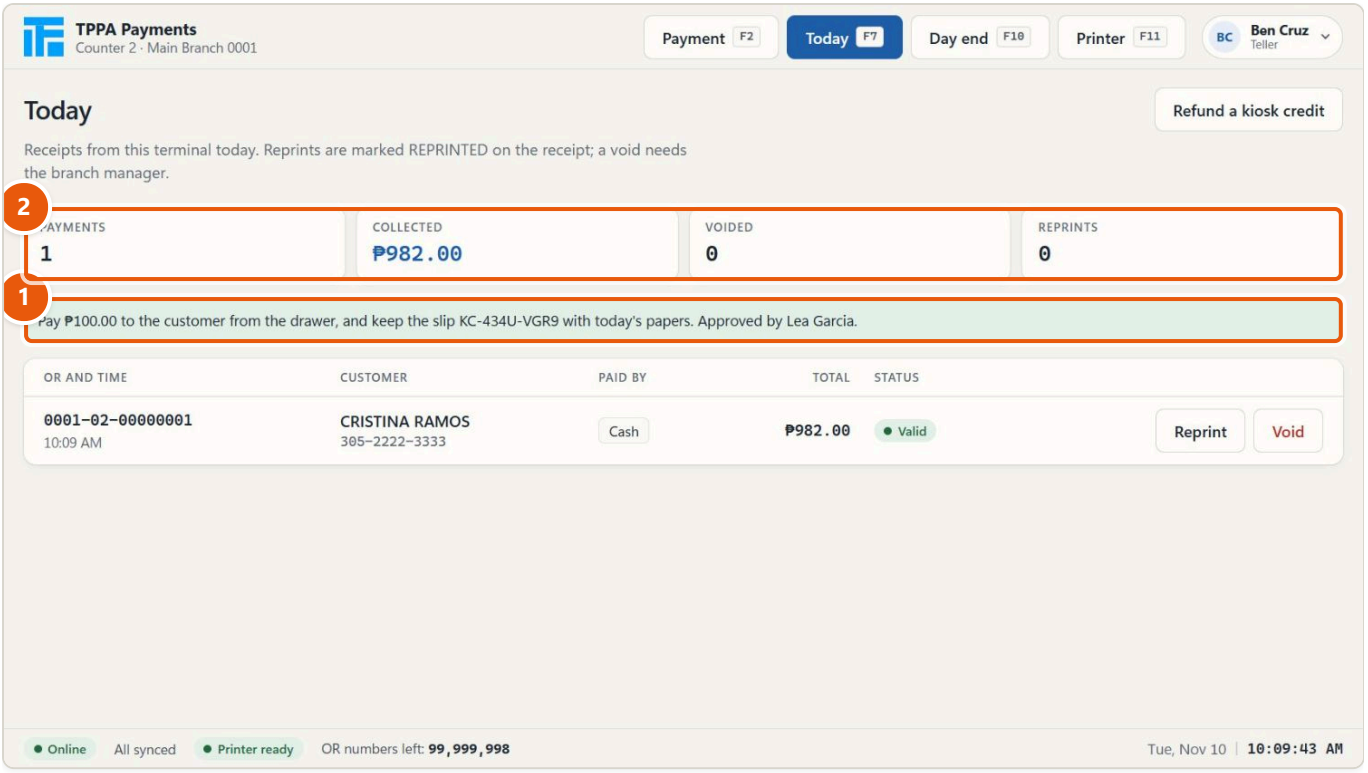

1 Refused: a different person must approve

The branch manager types her own username (1) and password (2), then presses Enter (3). The red message of the refused attempt is still shown in this picture: it clears when the manager's approval is sent.

1 lea.garcia, the branch manager
2 She types her own password
3 Refund the amount (Enter)

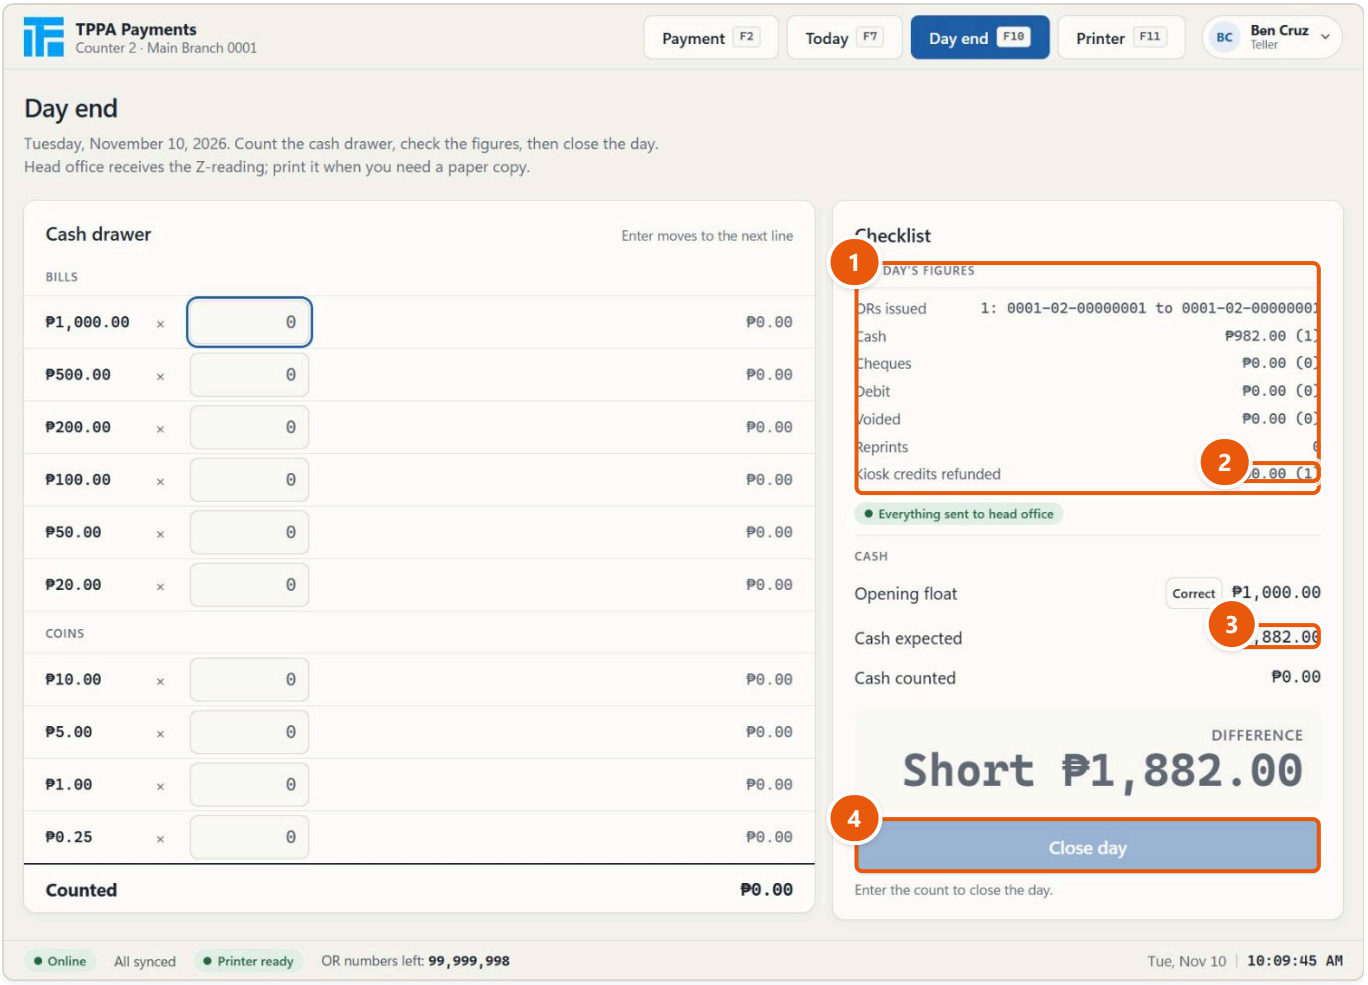

5. Head office marks the credit refunded, and Today shows: "Pay ₱100.00 to the customer from the drawer, and keep the slip KC-434U-VGR9 with today's papers. Approved by Lea Garcia." (1)

1 Pay this from the drawer; keep the slip

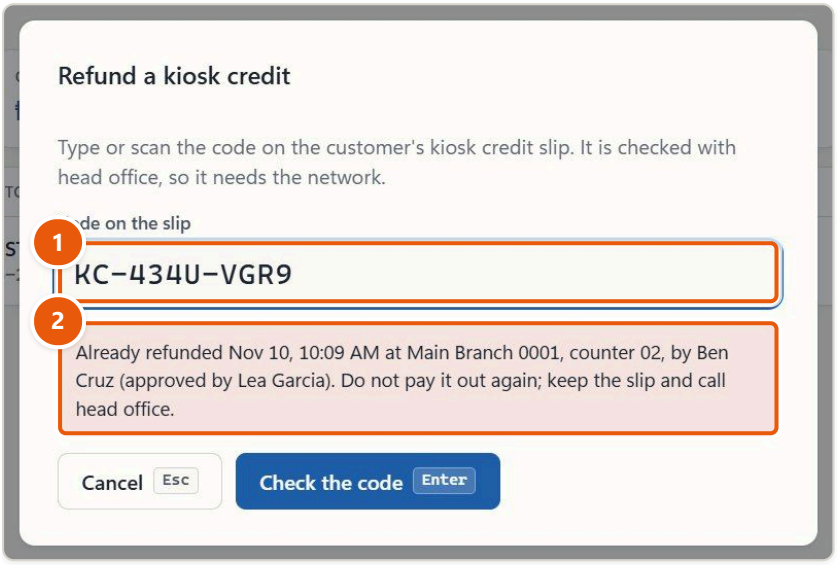

2 Payments only: the refund is not one

The refund is not a payment: it has no OR number, no receipt and no line on Today (2). It comes off the drawer: the Day end shows "Kiosk credits refunded" and takes it off the cash expected.

1 The day's figures
2 Kiosk credits refunded: amount (count)
3 Cash expected: float + cash - refunds
4 Close day: only after the count

The same slip a second time is refused before you are asked, with where, when and by whom it was refunded:

1 The same code again
2 Refused: already refunded, when, where, by whom

Other refusals:

- An unknown code: "Head office has no kiosk credit with this code. Check the code on the slip. If it is right, call head office: do not pay it out."
- The counter's day is closed: "The day is closed on this terminal: the drawer is counted. Refund it at another counter, or tomorrow."
- No network: "No network. A kiosk credit is checked with head office so it is paid only once. Connect to the network, or ask the customer to come back."

At head office, the credit's "Kiosk credit to refund" exception is then resolved by itself, with you as the approver (see "Exceptions" below).

7. At the counter: working as a teller

You may sign in at any counter of your branch with your own username and password, and use the teller app like a teller: take payments, reprint receipts, refund kiosk credits (approved by another branch manager) and close the day. The steps are in the **Teller guide**.

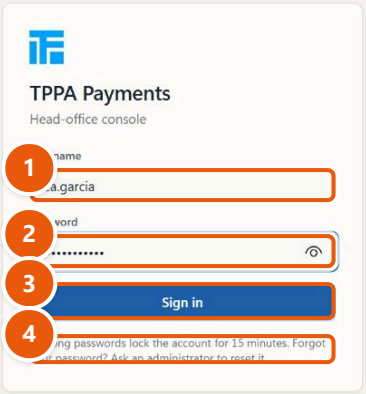

Keep in mind:

- **Your own approvals need someone else.** When you are the one signed in, a void, a float correction, a cash difference or a refund must be approved by another branch manager of the branch. On your own you can close the day only when the count matches.
- **Closing a teller's day.** If a teller could not close the day, you can sign in on that counter and close it (see "When a teller cannot close the day").
- **Sign out or lock** (`F12`) when you leave the counter.

8. In the console: getting started

Signing in

1. Open the console's address in your browser (IT gives it to you).
2. Type your **Username** (1) and **Password** (2) and click **Sign in** (3).

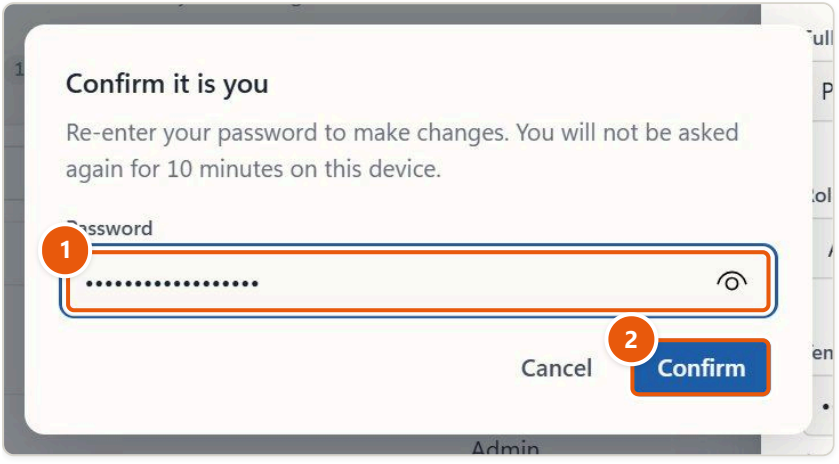

1 Your username
2 Your password
3 Sign in
4 Lockout and forgotten password

The sign-in page of the head-office console.

A wrong username or password gives "Wrong username or password." 5 wrong passwords lock the account for 15 minutes. Forgot your password? Ask an administrator to reset it.

Some changes ask "Confirm it is you": type your own password again and click **Confirm**. This happens when you take a kiosk out of service or bring it back.

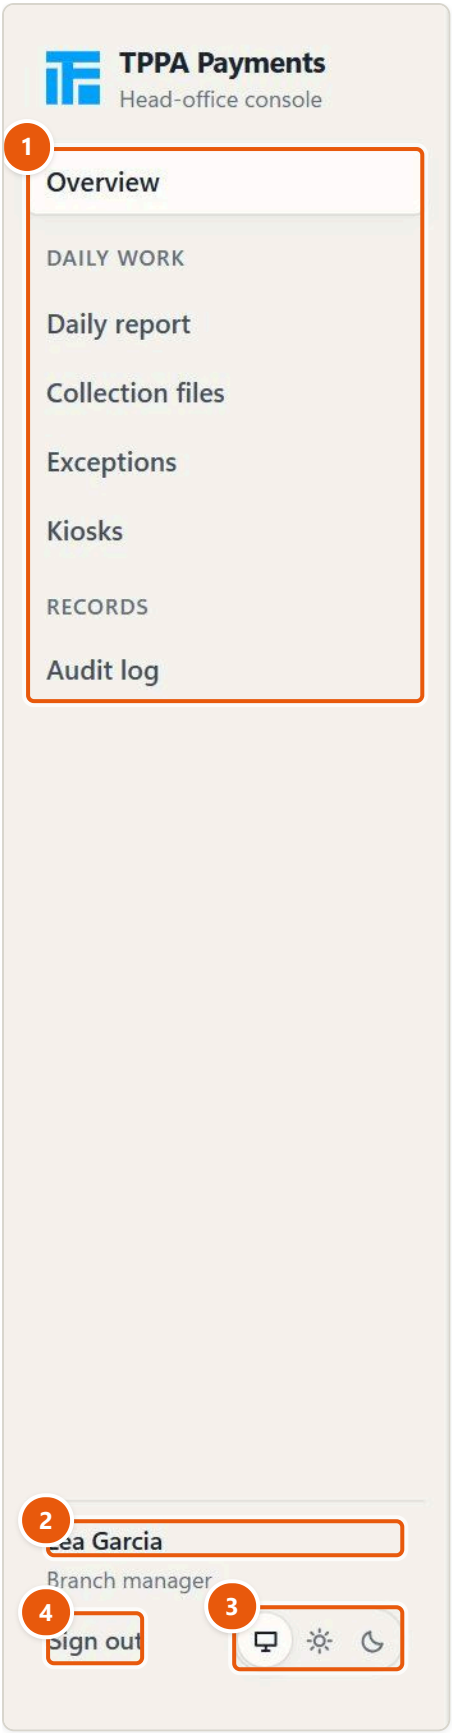

1 Your own password again
2 Confirm

Sensitive changes ask for the password again.

Your menu

The menu shows only the pages a branch manager may use (1), your name and role (2), the theme switch (3) and **Sign out** (4).

1. The menu: only the pages your role may use
2. Who is signed in, and the role
3. Light, dark or as this computer
4. Sign out

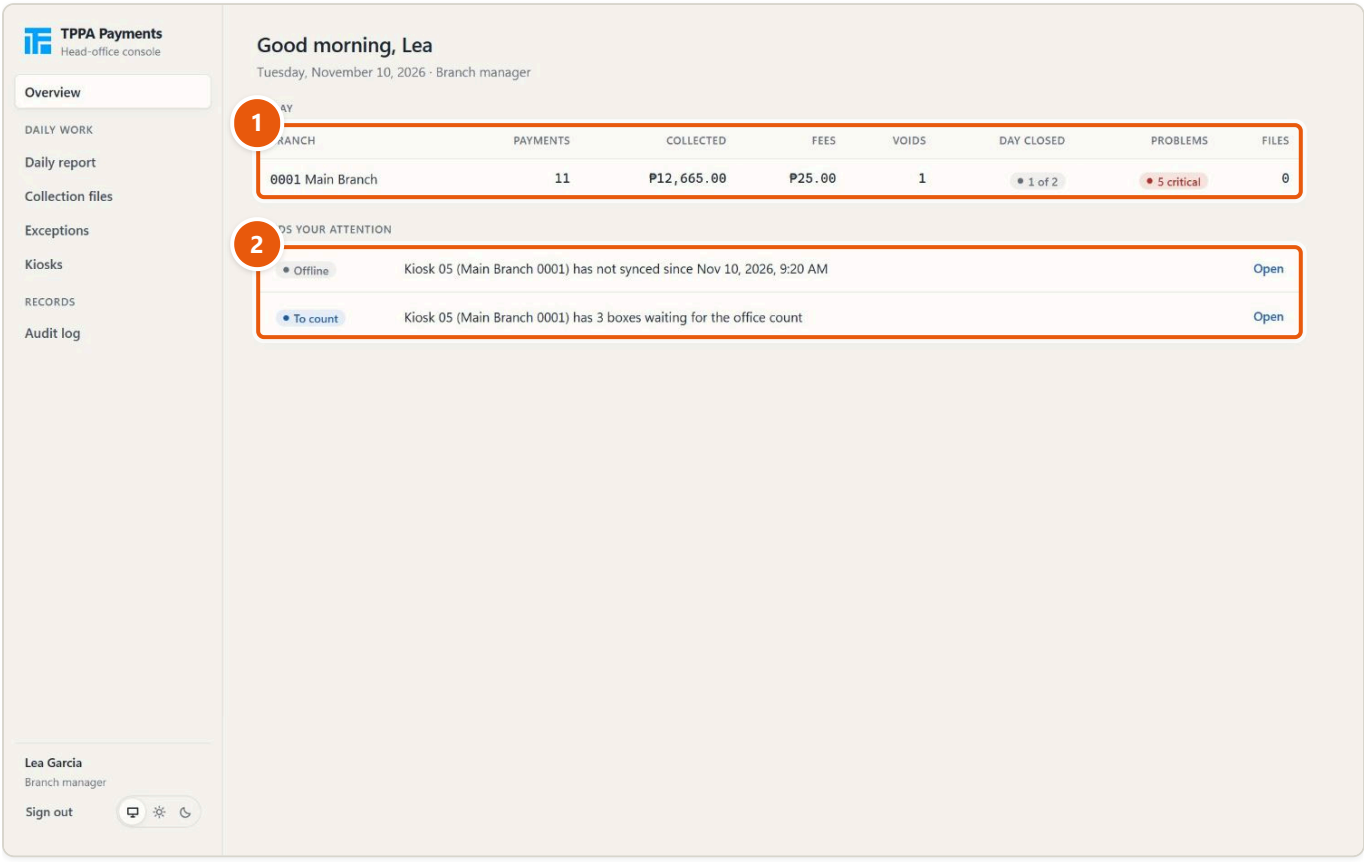

The menu of a branch manager.

Menu group	Pages
(top)	Overview
DAILY WORK	Daily report, Collection files, Exceptions, Kiosks
RECORDS	Audit log

Every page shows your branch only.

The Overview

TODAY (1) has one line, your branch: payments, collected, fees, voids, how many terminals have closed the day (e.g. "1 of 2"), open problems and collection files made. Click it to open the Daily report. **NEEDS YOUR ATTENTION** (2) lists your kiosks' items, e.g. "Offline: Kiosk 05 (Main Branch 0001) has not synced since …" or "To count: Kiosk 05 … has 3 boxes waiting for the office count" (head office counts them). Each has **Open**.

1 Today: your branch only

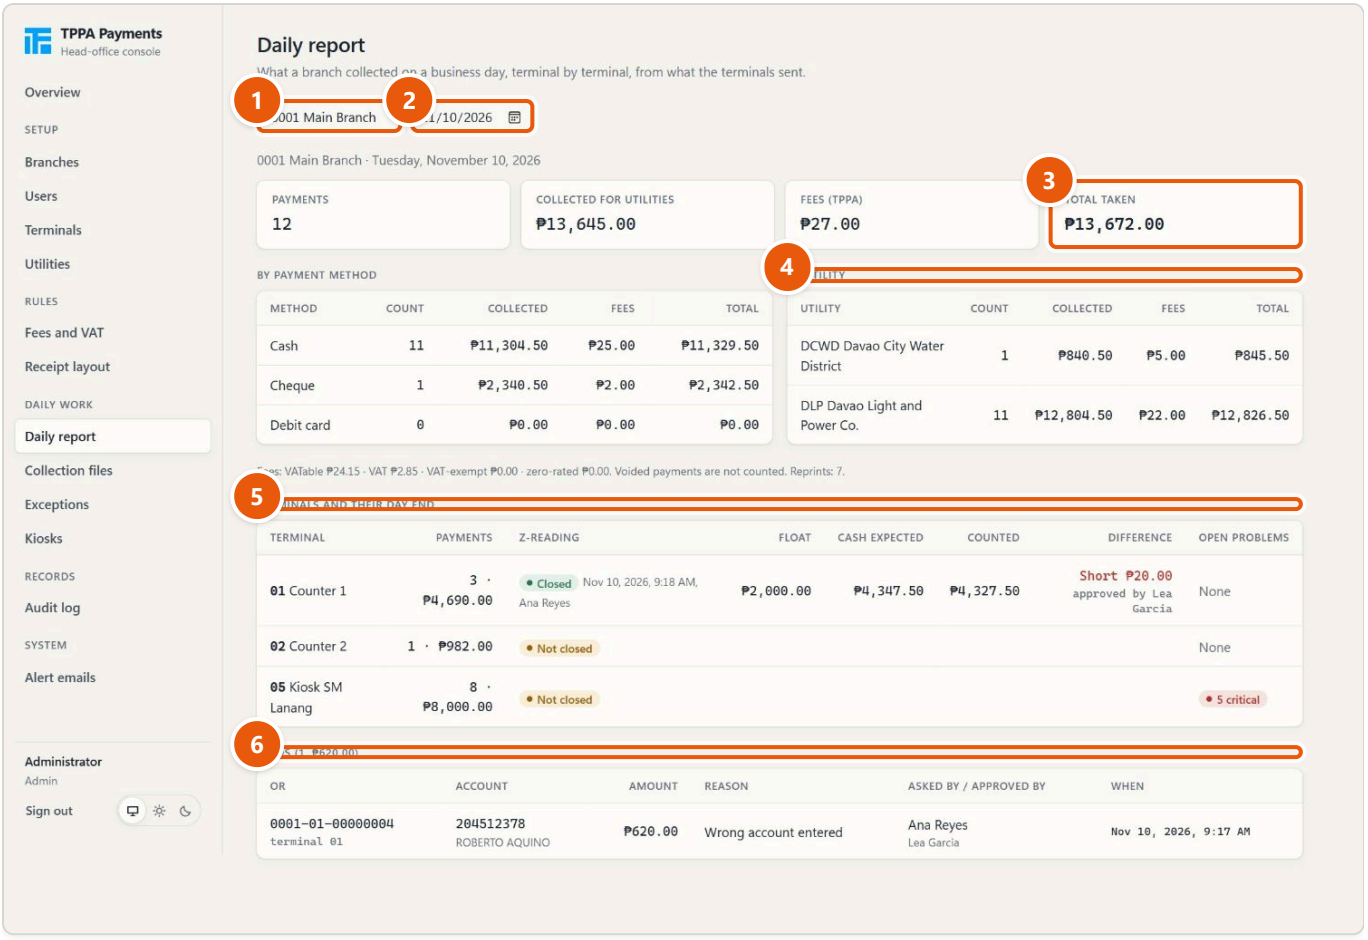

2 Needs your attention: your kiosks

Overview as a branch manager.

9. In the console: the Daily report

When: at the day end, to check the branch's day, and the next morning.

Click **Daily report** and choose the **Business day** (2). Your branch's name is shown instead of the branch selector.

1. Branch
2. Business day
3. The day in totals
4. By payment method and by utility
5. Each terminal: Z-reading, cash, difference
6. Voids: who asked, who approved

The daily report (here as an admin, with the branch selector; you see your branch's name).

- **The day in totals** (3): PAYMENTS (valid payments), COLLECTED FOR UTILITIES (the bill amounts), FEES (TPPA) and TOTAL TAKEN (what customers paid). Voided payments are not counted.
- **By payment method and by utility** (4).
- **Terminals and their day end** (5): for each counter and kiosk, its payments, **Closed** (when and by whom) or **Not closed**, the float, the cash expected, the cash counted, the difference with "approved by", and its open problems. A kiosk closes its day by itself at 12:00 midnight.
- **Voids** (6): each void, its reason, who asked and who approved.

Use it to check that every counter closed and that each difference is one you approved.

10. In the console: collection files

The collection files are what each utility receives for the branch's day: a **.TXT** file and a **.RPT** report per utility, with the valid payments and the bill amounts only.

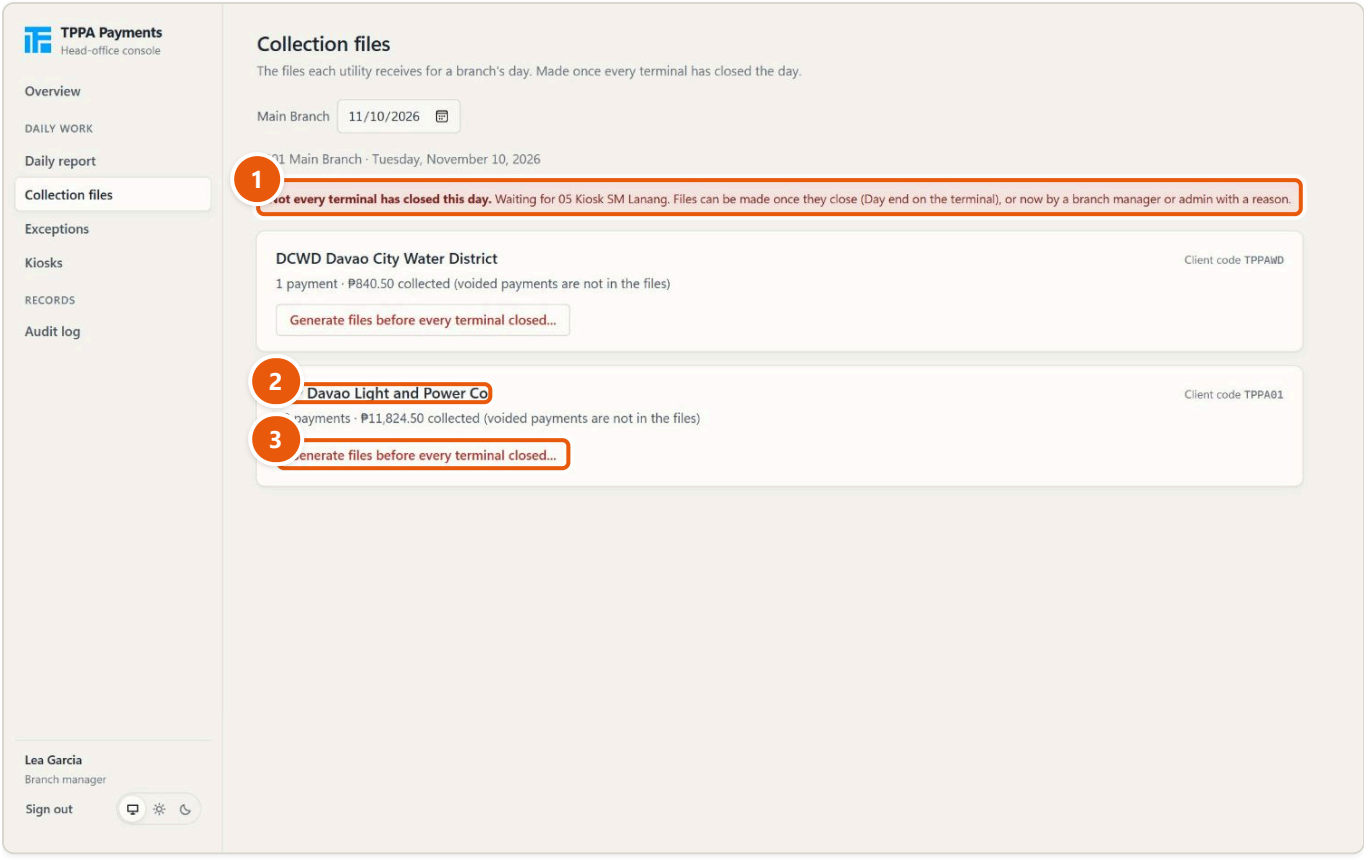

When every terminal has closed

Once every terminal of the branch has closed the day, the page says: "Every terminal of the branch has closed [the day]: the files can be made." On each utility's card click **Generate files**. The console says "Files ready." and shows the batch with its **.TXT** and **.RPT** downloads. The console does not send them to the utility: that is done by hand (see the Accounting guide).

Making them before every terminal has closed

When: a terminal cannot close the day (out of order, or the kiosk closes only at midnight) and the utility needs the file now. Only a branch manager or an admin can do this; Accounting cannot.

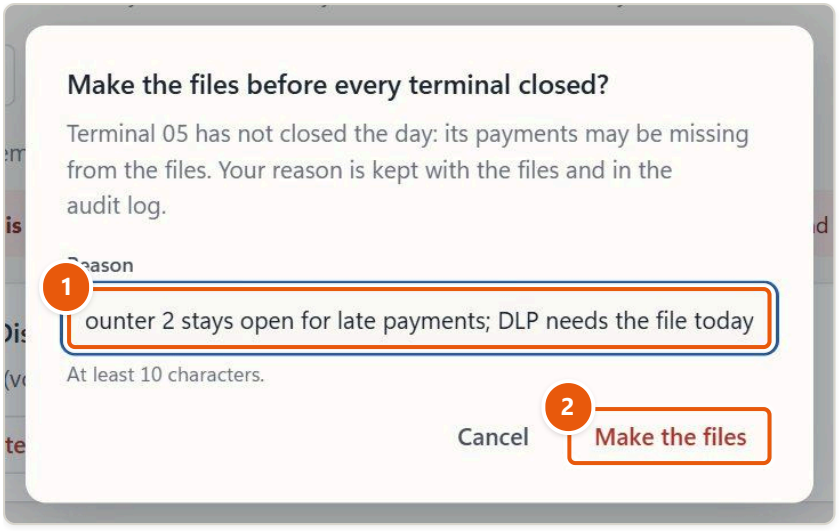

1. Click **Collection files**. The red message names the terminals still open (1): "Not every terminal has closed this day. Waiting for … Files can be made once they close (Day end on the terminal), or now by a branch manager or admin with a reason." Each utility has a card (2).
2. On the utility's card, click **Generate files before every terminal closed…** (3).

1 Not every terminal has closed: which ones
2 One card per utility
3 Make them now, with a reason

Collection files as a branch manager: a terminal has not closed the day.

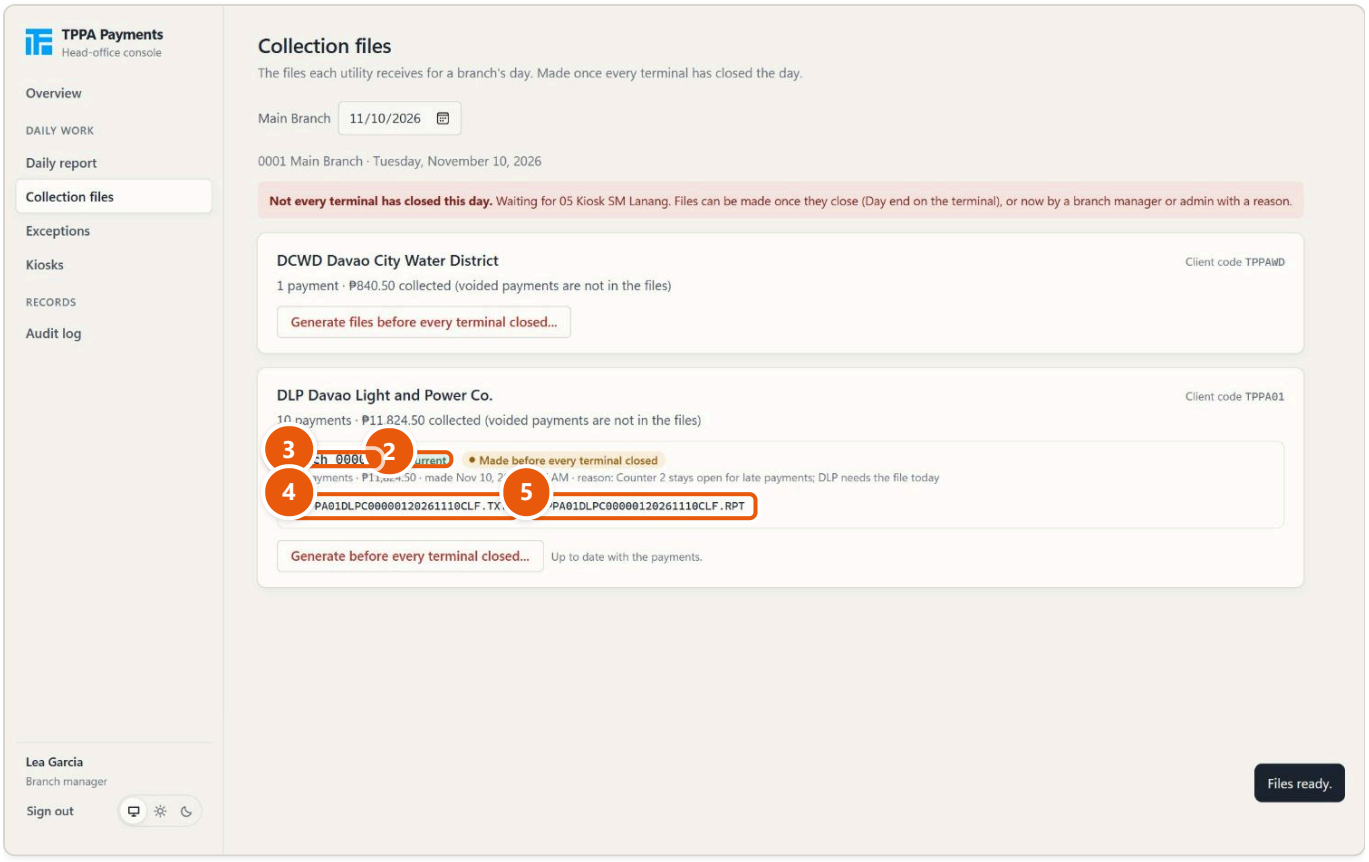

3. The dialog "Make the files before every terminal closed?" names the open terminal: "its payments may be missing from the files. Your reason is kept with the files and in the audit log." Type the **Reason** (1), at least 10 characters, naming the terminal and why the file is needed now.
4. Click **Make the files** (2).

1 Reason: at least 10 characters 2 Make the files

Making the files before every terminal closed.

The batch is marked **Current** (2) and "Made before every terminal closed" with your reason (3). Download the **.TXT** (4) and **.RPT** (5) if you send them.

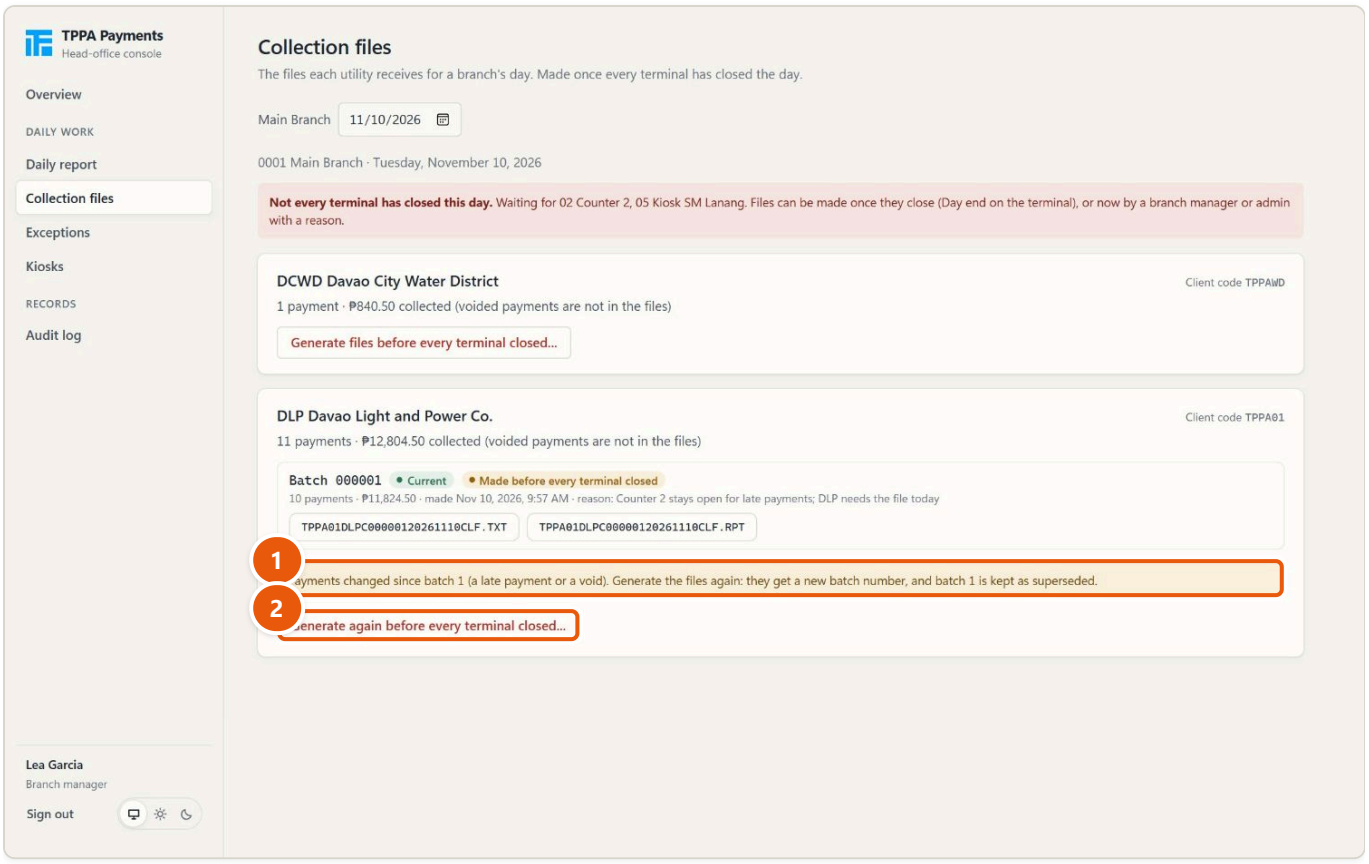

1 The batch number
2 Current
3 Made before every terminal closed, with the reason
4 Download the .TXT
5 Download the .RPT

The DLP files of the day, ready to download.

Warning: Payments of a terminal still open may be missing from these files. Head office sees a check "Files made before every terminal closed" with your reason on the Exceptions page.

When payments change after the files were made

A late payment or a void after the batch makes the card say "Payments changed since batch 1 (a late payment or a void). Generate the files again: they get a new batch number, and batch 1 is kept as superseded." Click **Generate again** (2) (with "before every terminal closed..." while terminals are still open):

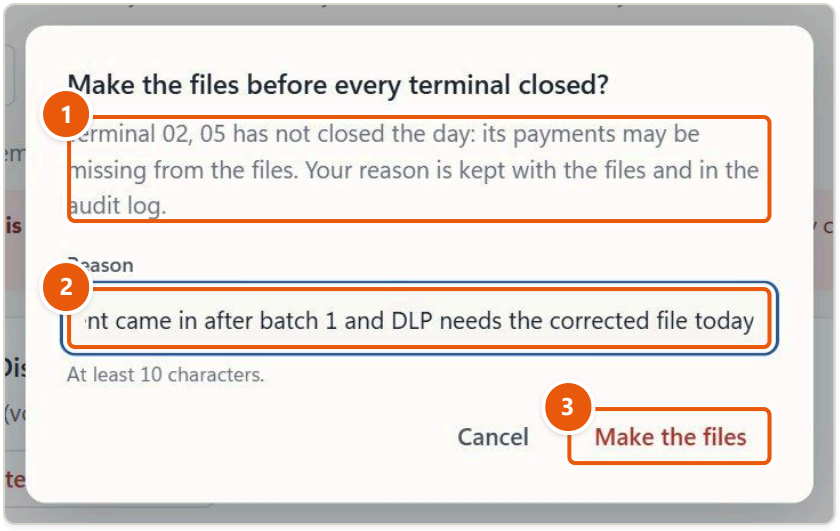

1 Payments changed since the batch

2 Generate again

A late payment: the files must be made again.

While terminals are open, the dialog asks for a reason again (1, 2); write which terminals are open and why the file is made again:

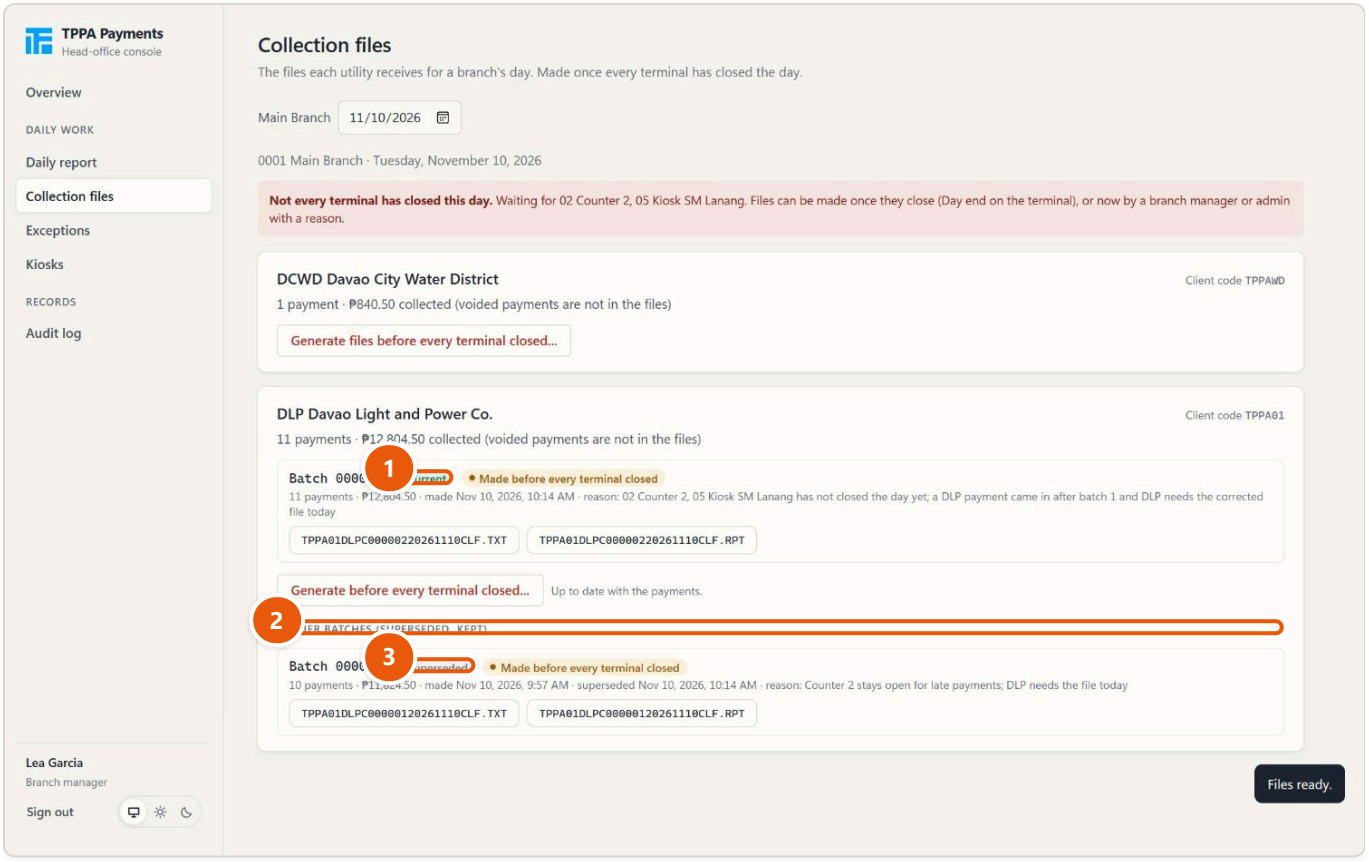

1 The terminals still open

2 Reason: names the terminal still open

3 Make the files

Generating again before every terminal closed: a reason again.

The new batch becomes **Current** (1); the earlier one is kept under "EARLIER BATCHES (SUPERSEDED, KEPT)" (2), still downloadable (3). When nothing changed, the card says "Up to date with the payments." and no new batch is made.

1 The new batch is current

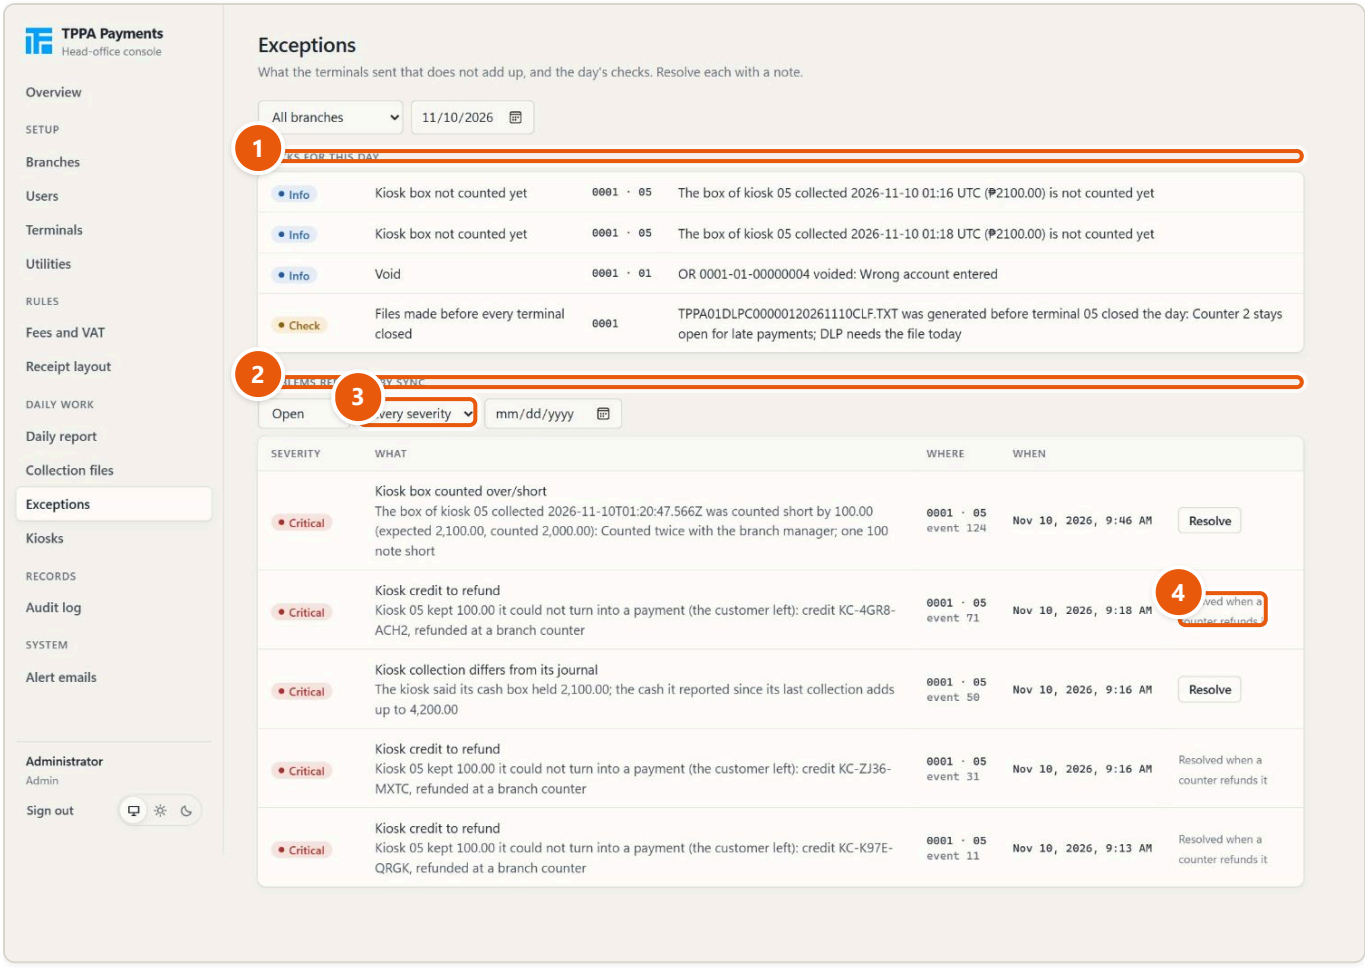

2 Earlier batches, kept as superseded

3 Superseded: when, and still downloadable

Generated again: the earlier batch is kept.

11. In the console: exceptions

The **Exceptions** page shows your branch's "CHECKS FOR THIS DAY" (worked out live, clear by themselves) and the "PROBLEMS REPORTED BY SYNC" (each resolved once, with a note).

1. Checks for this day: clear by themselves
2. Problems reported by sync
3. Filters: status, severity, day
4. A kiosk credit: resolved by its refund

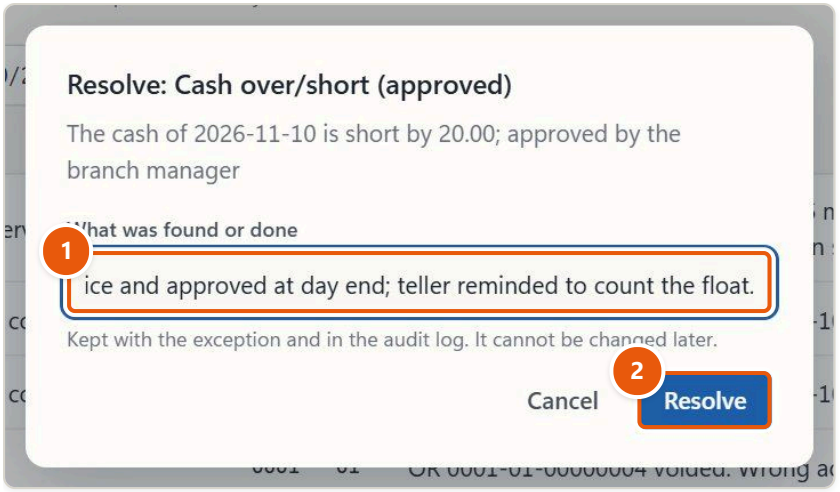

Exceptions (here as an admin with all branches; you see your branch).

Severities: **Critical** (red: money or records that do not add up), **Check** (amber) and **Info** (blue). The meaning of each kind is in the Accounting guide. Those that come from your counters most often:

- **Cash over/short (approved)**: a difference you approved at the day end.
- **Approved by the person who asked** / **Approved by someone who may not**: an approval that broke the four-eyes rule.
- **Kiosk credit to refund**: a credit slip a customer has not cashed yet. It shows "Resolved when a counter refunds it" and closes by itself when you approve its refund at a counter.

To resolve a problem you have looked into:

1. Click **Resolve** on its line.
2. Write in "What was found or done" (1), at least 5 characters, what you found or did.
3. Click **Resolve** (2). The note is kept and cannot be changed later.

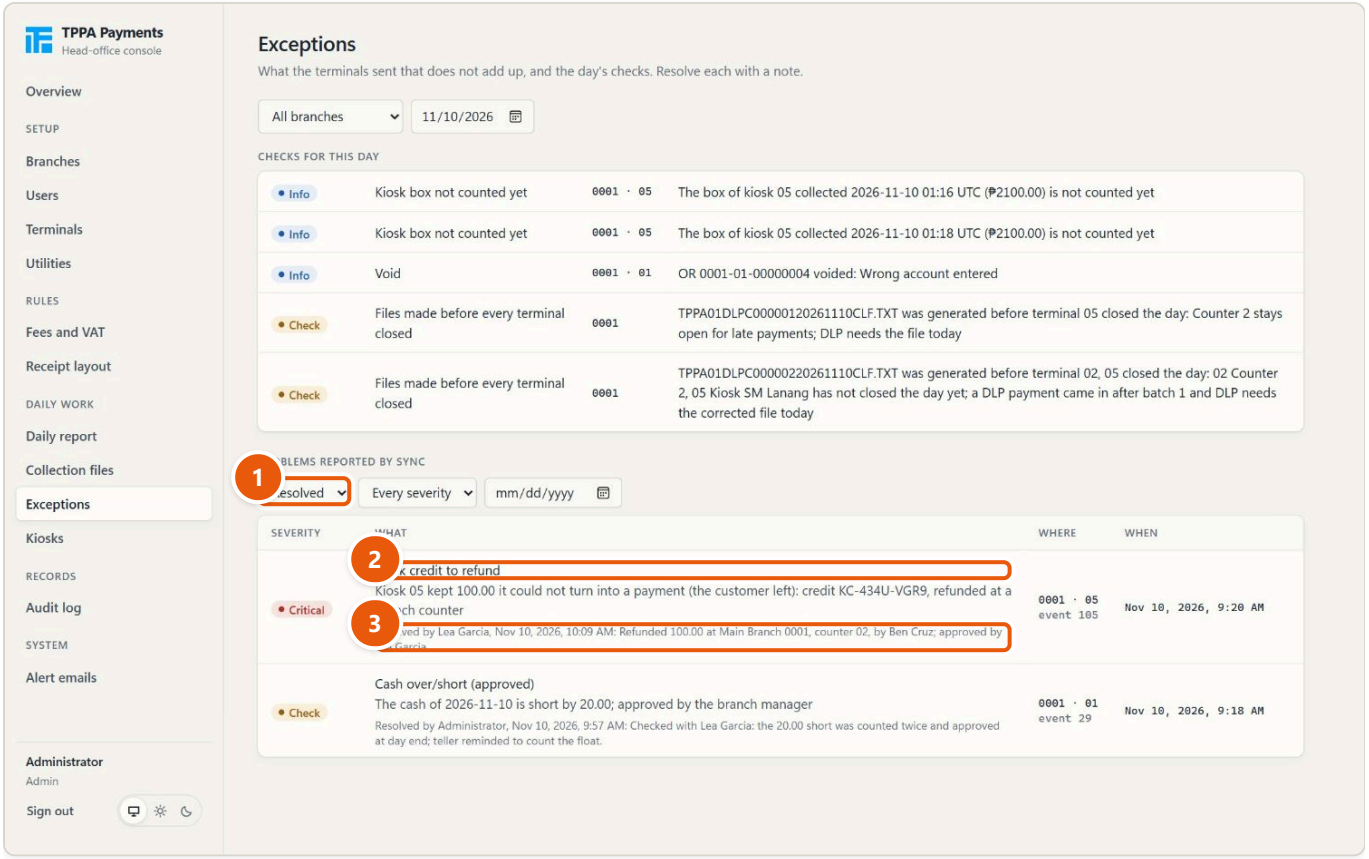

1 What was found or done (kept, cannot change)

2 Resolve

Resolving the ₱20 cash difference of Counter 1.

With the status filter on **Resolved**, the refunded kiosk credit shows who refunded it, where, and that you approved it (3):

1 Status: Resolved

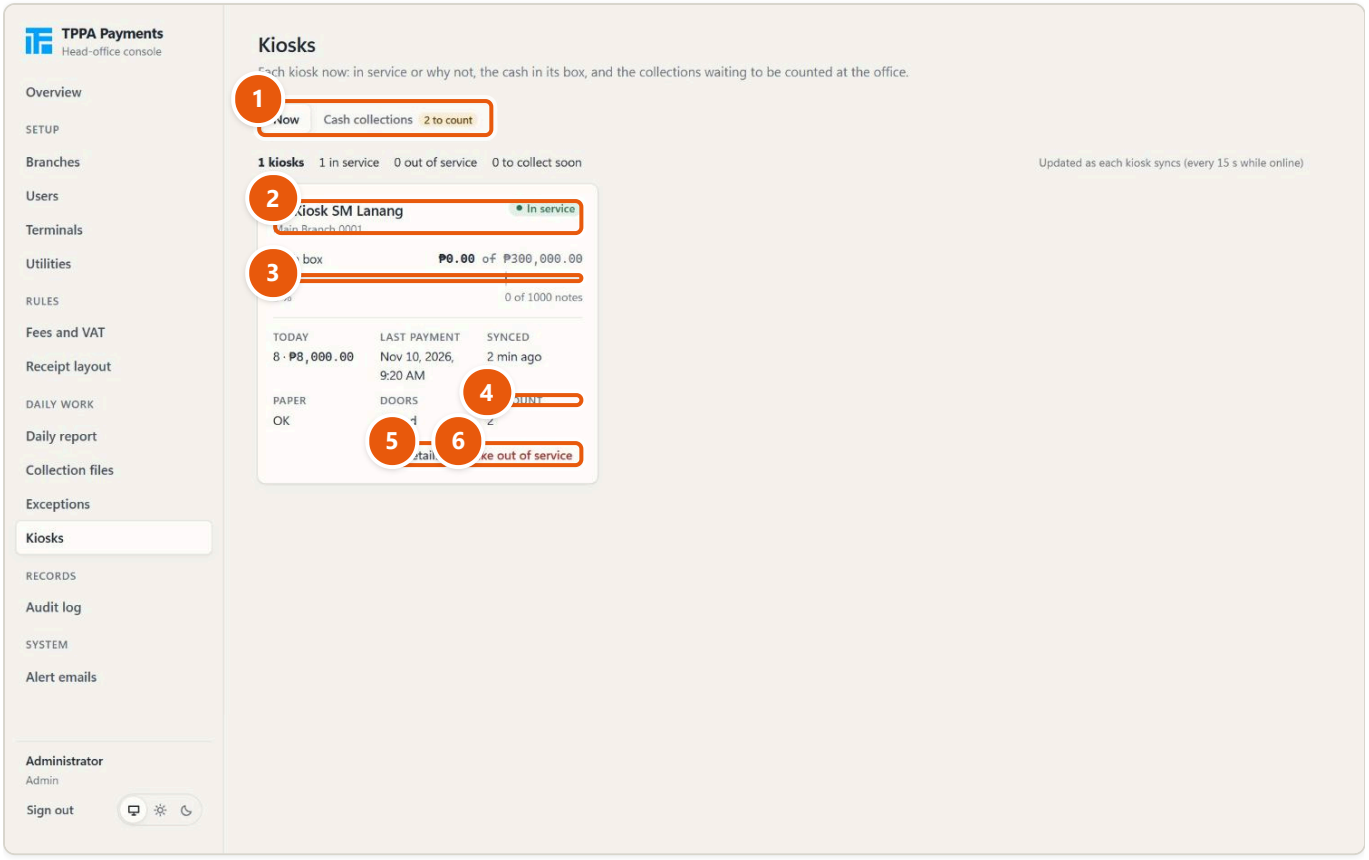

2 The kiosk credit

3 Resolved by its refund: where, who, approved by

A kiosk credit is resolved by its refund at a counter, not by hand.

12. In the console: your branch's kiosks

Kiosks shows each kiosk of your branch now: in service or why not, the cash in its box, the last sync, paper and doors, and the boxes waiting for the office count.

1. Now, or the cash collections
2. The kiosk and its state
3. Cash box against its limit (collect at 75 %)
4. Boxes waiting for the office count
5. Details
6. Take out of service

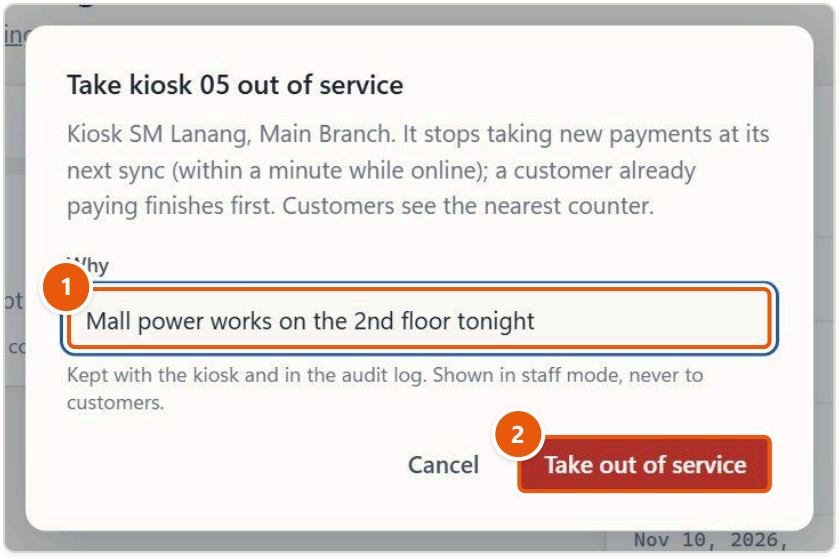

Kiosks, Now (here as an admin; a branch manager has the same Take out of service button).

Details (5) opens the kiosk: its cash box by note and coin, recent activity and collections. The **Cash collections** tab lists the collected boxes and their office count. You see them, but you do not count them: there is no **Enter the count** and no **Record from a slip** for a branch manager. Accounting or an admin counts each box, and never the person who collected it.

Taking a kiosk out of service

When: the kiosk must stop taking payments, for example a mall closure or works at the site.

1. On the kiosk's card, click **Take out of service** (6).
2. Type **Why** (1), at least 5 characters. It is kept with the kiosk and in the audit log, and shown in staff mode, never to customers.
3. Click **Take out of service** (2), and confirm with your password if asked.

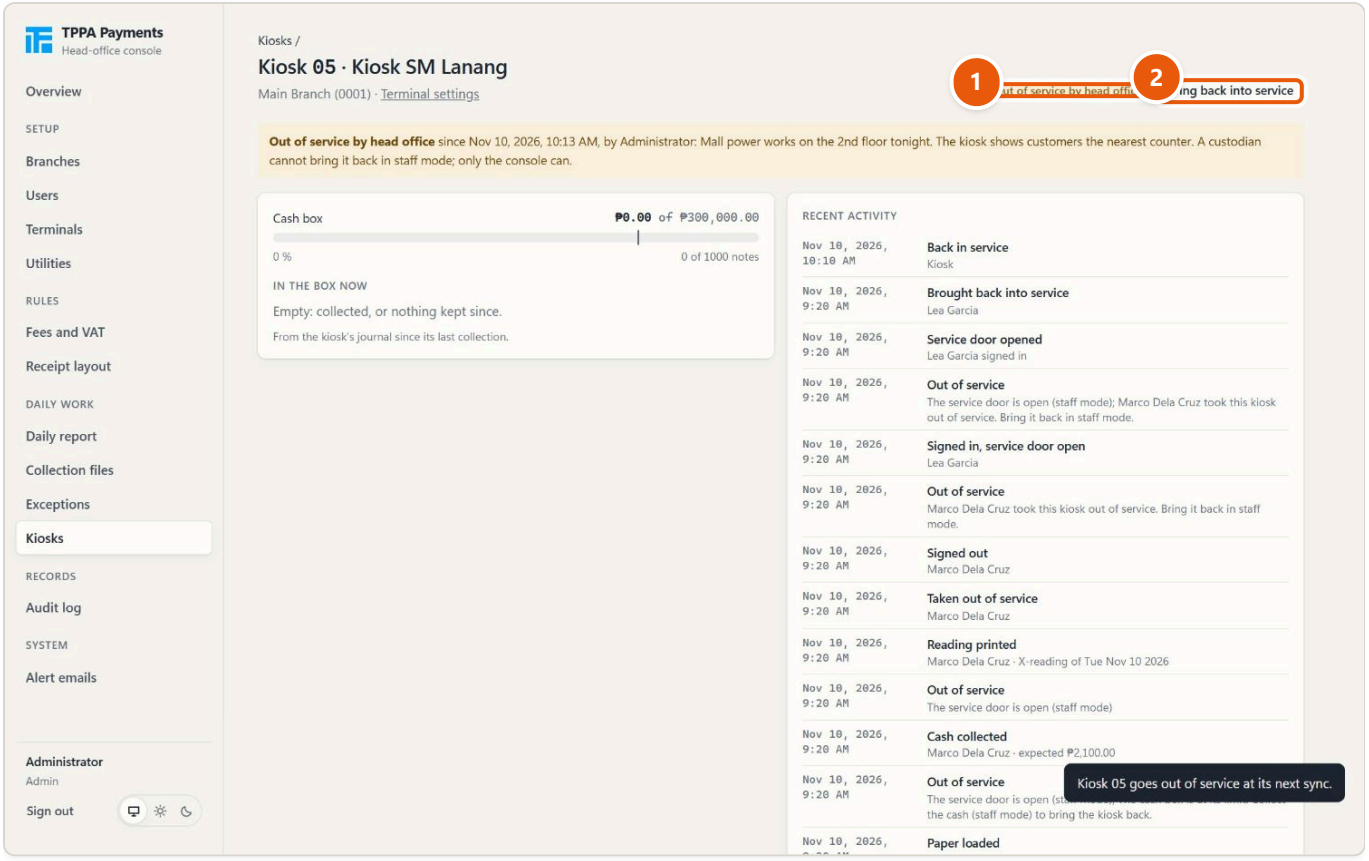

1 Why: kept, shown in staff mode only

2 Take out of service

Head office takes a kiosk out of service.

The console says "Kiosk 05 goes out of service at its next sync." It stops taking new payments within a minute while online; a customer already paying finishes first. Customers see the nearest counter. The kiosk card then says who took it out, when and why (1):

1 Out of service by head office: who, when, why

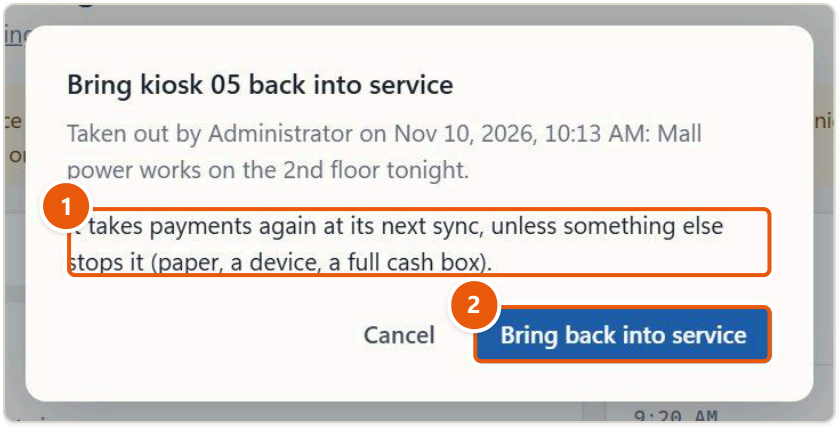

2 Bring back into service

The kiosk held by head office.

Note: The card says: "A custodian cannot bring it back in staff mode; only the console can." Bring it back here, in the console.

Bringing it back

1. Click **Bring back into service** (2 above).
2. In the dialog, click **Bring back into service** (2).

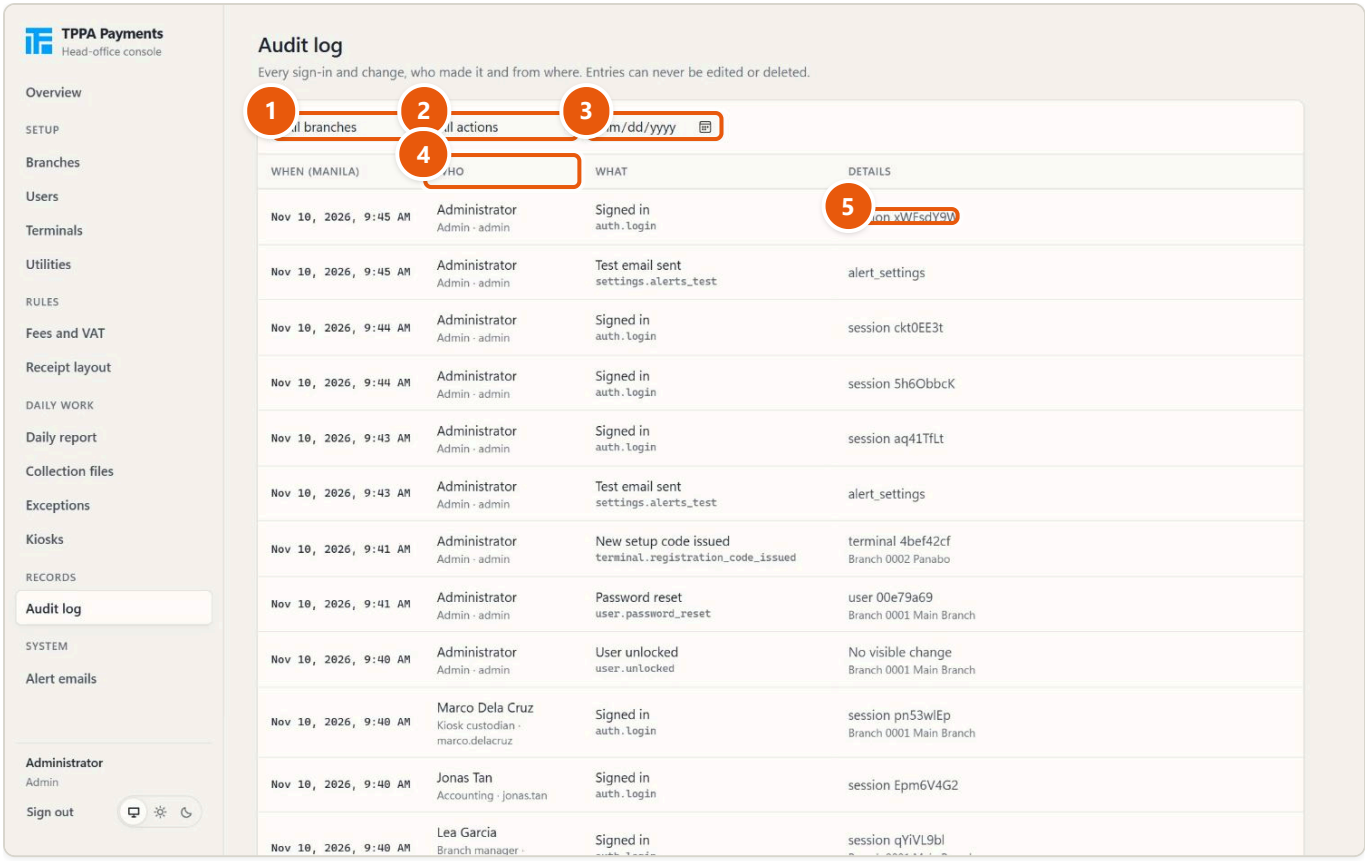

1 Unless something else stops it 2 Bring back into service

Bringing the kiosk back into service.

The console says "Kiosk 05 is back in service at its next sync." It takes payments again unless something else stops it (paper, a device, a full cash box) (1).

13. In the console: the audit log

The **Audit log** shows "Sign-ins and changes for your branch. Entries can never be edited or deleted." Filter by **Kind of action** and **Day**; click an entry for its details (each field before and after, the computer's address and browser). It is read-only.

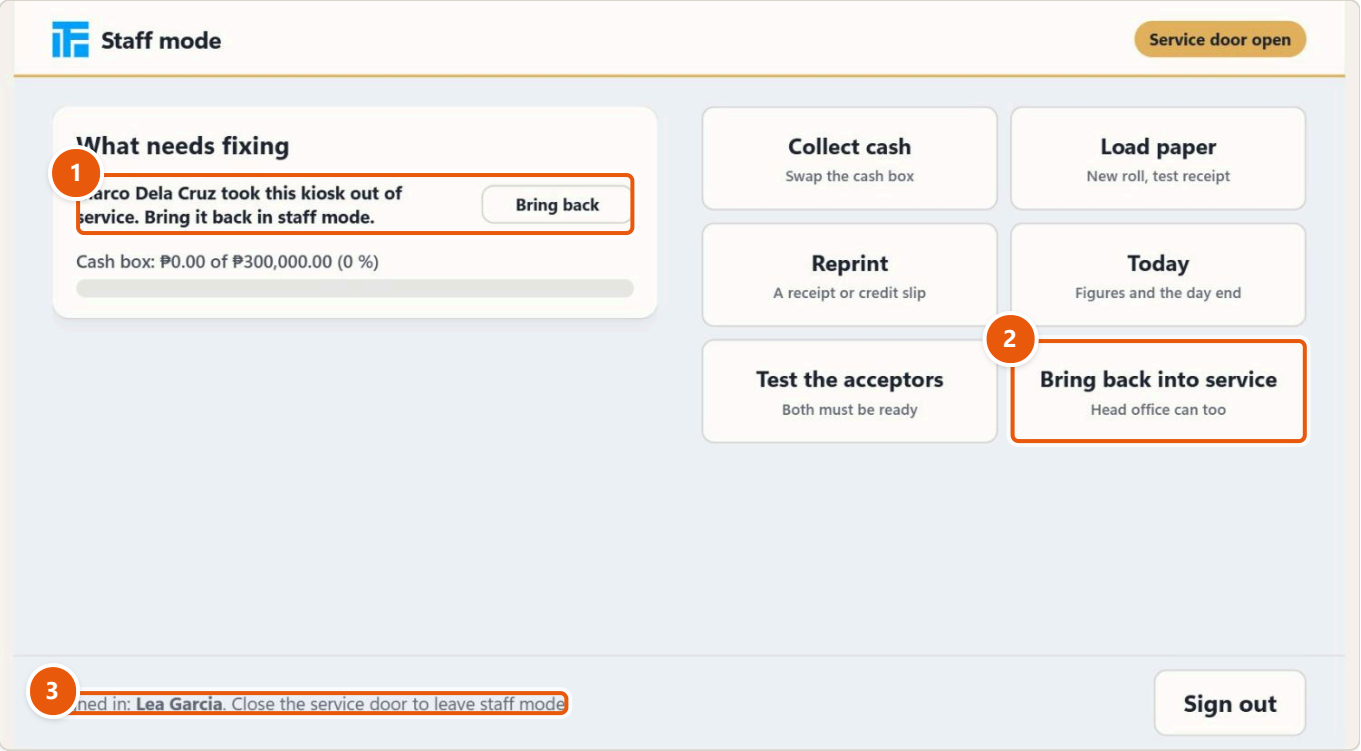

1. Branch
2. Kind of action
3. Day
4. Who, with role and username
5. Click for the details

The audit log (here as an admin, with the branch filter).

14. At the kiosk: staff mode

A branch manager may sign in to a kiosk's staff mode of their branch, like a kiosk custodian: open the service door, then sign in with your own username and password. The screen says "A kiosk custodian, branch manager or admin, with their own username and password." From there you can collect cash, load paper, reprint, see the day's figures, test the acceptors, and take the kiosk out of service or bring it back (but not when it was taken out in the console). The steps are in the **Kiosk custodian guide**.

Here Lea Garcia signed in (3) to bring back a kiosk that a custodian had taken out (1, 2):

1. Who took it out, and Bring back
2. Bring back into service
3. A branch manager signed in

If you collect a kiosk's cash box yourself, someone at the office (Accounting or an admin) counts it. Close the service door to leave staff mode.

15. Day-to-day checklist

Morning

- Open the console's **Overview**: is every counter of yesterday closed? Any kiosk offline or out of service?
- On the **Daily report** for yesterday, check each terminal's day end and the differences you approved.
- If the utilities need yesterday's **collection files** and they are not made yet, check that every terminal closed (the kiosk closes at midnight) and generate them, or tell head office.
- At each counter, the teller declares the **opening float** before the first payment. Correct it with them if it is wrong.

During the day

- Approve **voids**, **float corrections** and **kiosk credit refunds** at the counters, after checking the reason, the receipt or the slip.
- Keep the voided receipts and the refunded kiosk credit slips with the day's papers.
- Look at **Exceptions** for your branch, and at **Kiosks** (cash box near its limit, paper, out of service).

Day end

- Each teller counts the drawer and closes the day. Approve a cash difference only after a second count.
- Check on the **Daily report** that every counter shows **Closed**.
- If a terminal cannot close and a file is needed today, make the **collection files** early with a reason.

16. When a teller cannot close the day

What the teller sees	What to do
"The count is short by …" / "over by …"	Ask for a second count; if it still differs, approve with your username and password
"A different person must approve the cash difference…"	The teller typed their own name: you type yours
"This is an earlier day that was not closed. Close it first; then close the next one."	Close the earlier day first: days close in order
"… waiting to sync: sent when the network is back"	The day can be closed offline; the records go to head office when the network is back. The collection files wait until the closed day has reached head office.
The teller has left without closing	Sign in on that counter yourself and close the day. If the count differs, another branch manager must approve.
The counter does not work at all	Call IT (Troubleshooting guide). If a file is needed today, make the collection files early with a reason naming that terminal.
Your approval is refused offline	Connect the counter to the network, or another branch manager who signed in there recently approves

For other problems, see the Troubleshooting guide.

17. Quick reference

Task	Where
Approve a void	Teller app, Today (`F7`), **Void**: your username and password, **Void receipt**
Approve a float correction	Teller app, Day end (`F10`), **Correct**: your username and password, **Save float**
Approve a cash difference	Teller app, Day end: your username and password, **Approve and close day**
Approve a kiosk credit refund	Teller app, Today, **Refund a kiosk credit**: your username and password, **Refund ₱…**
Take payments, close a day	Teller app, as in the Teller guide
Your branch today	Console, Overview
The branch's day	Console, Daily report
Make the collection files	Console, Collection files, **Generate files**
Make them before every terminal closed	Console, Collection files, **Generate files before every terminal closed…**, reason
Make them again after a change	Console, Collection files, **Generate again**

Task	Where
Resolve a problem	Console, Exceptions, **Resolve**
Take a kiosk out of service / bring it back	Console, Kiosks, **Take out of service** / **Bring back into service**
Who did what at the branch	Console, Audit log
Service a kiosk	Kiosk, open the service door, staff mode (Kiosk custodian guide)
